

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet: Analitična mehanika
Course title: Analytical mechanics

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Magistrski študijski program 2. stopnje Finančna matematika	ni smeri	prvi ali drugi	prvi ali drugi
Second cycle master study program Financial Mathematics	none	first or second	first or second

Vrsta predmeta / Course type izbirni predmet/elective course

Univerzitetna koda predmeta / University course code: še ni dodeljena/not assigned yet

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
30	15	30			105	6

Nosilec predmeta / Lecturer: doc. dr. George Mejak

Jeziki / Languages:
Predavanja / Lectures: slovenski/Slovene, angleški/English
Vaje / Tutorial: slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Lagrangeeva mehanika: Konfiguracijski prostor. Holonomni, neholonomni sistemi vezi. Princip virtualnega dela. D'Alembertov princip. Lagrangeeve enačbe. Konstante gibanja; ciklične spremenljivke, Jacobijeva energijska funkcija, izrek Emmy Noether. Variacijski princip. Majhna nihanja okoli ravnovesne lege. Posplošen potencial.

Hamiltonova mehanika: Legendrova transformacija. Hamiltonova funkcija, kanonski sistem. Poissonov oklepaj; odvajanje vzdolž rešitve kanonskega sistema; konstante gibanja, Poissonov izrek. Kanonska transformacija; simplektična matrika, simplektični pogoj. Rodovne funkcije. Hamilton-Jacobijeva enačba

Lagrangian mechanics: Configurational space. Holonomic and nonholonomic constraints. Principle of virtual work. D'Alembert principle. Lagrangian equations. Constant of motion. Cyclic variables, Jacobi energy function, Emmy-Noether theorem. Variational principles. Small oscillations. Generalized potential.

Hamiltonian mechanics: Legendre transformation. Hamiltonian function, canonical system. Poisson bracket, differentiation along solution of the canonical system, integrals of motion, Poisson theorem. Canonical transformation, symplectic matrix, symplectic condition. Generating functions. Hamilton-Jacobi equation.

Temeljni literatura in viri / Readings:

- V. I. Arnold: *Mathematical Methods of Classical Mechanics*, 2nd edition, Springer, New York, 1997.
- H. Goldstein, C. P. Poole, J. L. Safko: *Classical Mechanics*, 3rd edition, Addison-Wesley, Reading, 2002.
- A. Fasano, S. Marmi, *Analytical Mechanics: An Introduction*, Oxford University Press, Oxford, 2006
- J. V. José, E. J. Saletan: *Classical Dynamics : A Contemporary Approach*, Cambridge Univ. Press, Cambridge, 1998.

Cilji in kompetence:

Cilj predmeta je pridobiti osnovna znanja s področja analitične mehanike. Vsebine predmeta omogočajo uspešno reševanje dinamičnih problemov in ponazarjajo uporabo različnih matematičnih področij pri reševanju problemov s področja mehanike.

Objectives and competences:

The goal is to obtain basic knowledge of principles of analytical mechanics. Mastering them enables problem solving of dynamical problems and to understand the role of mathematics in mechanics

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje in razumevanje osnovnih metod analitične mehanike

Uporaba: Osnova za nadgraditev osvojenega znanja s specifičnimi modeli iz področja klasične mehanike. Temelj za nadaljnji

Intended learning outcomes:

Knowledge and understanding: Knowledge and understanding of basic principles and methods of analytical mechanics.

Application: Application of the learnt methods in solving dynamical real word problems. First step for further graduate level study of

poglobljeni študij metod klasične in relativistične mehanike.

Refleksija: Povezovanje osvojenega matematičnega znanja v okviru enega predmeta in njegova uporaba na področju analitične mehanike.

Prenosljive spretnosti – niso vezane le na en predmet: študent razvija sposobnost predstavitve problema na jasn in logičen način. Nauči se formulirati problem, izbrati ustrezeni model, analizirati rešitev in preveriti veljavnost modela in rešitve.

methods of classical and relativistic mechanics.

Reflection: Crossbreeding of different mathematical subjects within a single course and their application.

Transferable skills: Students develop abilities to clearly and logically formulate problems. They learn to critically assess modeling by analyzing their predictions and comparing them with real examples.

Metode poučevanja in učenja:

predavanja, vaje, seminar, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, seminar, homeworks, consultations

Predavanja / Lectures: slovenski/Slovene, angleški/English
Vaje / Tutorial: slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:
 potrebno predznanje linearne algebre, diferencialnih enačb, topologije v evklidskih prostorih

Prerequisites:
 Linear algebra, differential equations, topology in euclidean spaces.

Vpis v letnik študija

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Kvalitativna analiza sistemov nelinearnih diferencialnih enačb. Osnovni izreki o eksistenci in enoličnosti rešitev za sisteme (ponovitev in dopolnitev).

Fazni portret avtonomnega sistema. Klasifikacija kritičnih točk, izrek Hartmana in Grobmana o linearizaciji, teorija stabilnosti, metoda Ljapunova.

Periodična gibanja in cikli v ravnini. Poincaré-Bendixsonova teorija (topološke osnove, izpeljava in uporaba), izrek Kolmogorova, Hopfova bifurkacija in nastanek ciklov, uvod v kaotično gibanje.

Osnove diskretne dinamike. Diferenčne enačbe. Logistična enačba. Klasifikacija fiksnih točk. Podvajanje period in kaos. Heteroklinične orbite in Smalova podkev. Polinomska iteracija v kompleksnem. Juliajeva in Fatoujeva množica. Mandelbrotova množica.

Uporaba v fiziki, medicini, biologiji, ekonomiji, elektrotehniki.

Qualitative analysis of systems of nonlinear differential equations. Basic existence and uniqueness theorems for systems (repetition and completion)

Phase portraits of autonomous systems. Classification of critical points, Hartman-Grobman linearization theorem, stability theory, Lyapunov method.

Periodic motions and cycles in the real plane. Poincaré-Bendixson theory (topological background, proof and examples), Kolmogorov theorem, Hopf bifurcation and emerging of cycles, introduction to chaotic motion.

Basic discrete dynamics. Difference equations. The logistic equation. Classification of fixed points. Period doubling and chaos. Heteroclinic orbits and Smale horseshoe. Polynomial iteration in the complex plane. Julia, Fatou and Mandelbrot sets.

Examples from physics, medicine, biology, economy, electrical engineering.

Temeljni literatura in viri / Readings:

Gerald Teschl, *Ordinary Differential Equations*, Graduate Studies in Mathematics, Volume 140, Amer. Math. Soc., Providence, 2012.

Boris Hasselblatt, Anatole Katok, *A first course in dynamics : with a panorama of recent development*, Cambridge University Press, 2003.

L. Perko: *Differential equations and dynamical systems*, 3rd edition, Springer, New York, 2001.

C. Robinson: *Dynamical Systems, Stability, Symbolic Dynamics and Chaos*, CRC Press 1999.

D.K. Arrowsmith, C.M. Place: *Dynamical Systems: Differential Equations, Maps and Chaotic Behaviour*, Chapman & Hall, 1992.

D.W. Jordan, P. Smith: *Nonlinear Ordinary Differential Equations*, Clarendon Press, Oxford 1977.

Cilji in kompetence:

Študent se seznani z osnovnimi metodami, ki se uporabljajo pri obravnavi dinamičnih sistemov. Pri tem uporabi znanje iz linearne algebre, diferencialnih enačb in topologije. Spozna različne zglede modeliranja pojavov v medicini, ekonomiji, biologiji in fiziki.

Objectives and competences:

Students learn basic methods used in the theory of dynamical systems. Linear algebra, differential equations and topology are applied. Various examples of modeling from medicine, economy, biology and physics are presented.

Predvideni študijski rezultati:**Znanje in razumevanje:**

Razumevanje pojmov, kot so: dinamični sistem, stabilnost, periodično gibanje, bifurkacija in kaos.

Uporaba:

Formuliranje, modeliranje in reševanje različnih problemov iz medicine, biologije, fizike in ekonomije.

Refleksija:

Razumevanje teorije na podlagi primerov in uporabe. Številni zgledi pomagajo spoznati vlogo matematike v naravoslovju in tehniki.

Prenosljive spretnosti – niso vezane le na en predmet:

Identifikacija, formulacija in reševanje problemov iz drugih strok v matematičnem jeziku. Spretnost uporabe domače in tuje literature.

Intended learning outcomes:**Knowledge and understanding:**

Understanding concepts such as dynamical system, stability, periodic motion, bifurcation, chaos.

Application:

Formulation, modeling and solving various problems in medicine, biology, physics and economy.

Reflection:

Understanding of the theory from the applications. Examples show the role of mathematics in other sciences.

Transferable skills:

Understanding of the theory from the applications. Examples given explain the role of mathematics in natural sciences and engineering.

	Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

vpis predmeta *Uvod v funkcionalno analizo*

Prerequisites:

enrollment into the course *Introduction to Functional Analysis*

Vsebina:

Content (Syllabus outline):

Banachovi prostori. Linearni operatorji in funkcionali na Banachovih prostorih.

Izrek o odprtih preslikavi. Izrek o zaprtem grafu. Princip enakomerne omejenosti. Drugi dual.

Adjungirani operator na Banachovem prostoru.

Šibke topologije. Banach-Alaoglujev izrek.

Krein-Milmanov izrek o ekstremnih točkah.

Banachove algebre. Ideali in kvocienti. Spekter elementa. Rieszov funkcijski račun. Gelfandova transformacija.

C^* -algebre. Približne enote. Ideali in kvocienti. Komutativne C^* -algebre. Funkcijski račun v C^* -algebrah. Gelfand-Naimark-Segalova konstrukcija.

Banach spaces. Linear operators and functionals on Banach spaces.

The open mapping theorem. The closed graph theorem. The principle of uniform boundedness. The second dual.

The adjoint operator on a Banach space .

Weak topologies. The Banach-Alaoglu theorem. The Krein-Milman theorem on extreme points.

Banach algebras. Ideals and quotients. The spectrum of an element. Riesz functional calculus. The Gelfand transform.

C^* -algebras. Approximate units. Ideals and quotients. Commutative C^* -algebras. The functional calculus in C^* -algebras. The Gelfand-Naimark-Segal construction.

Temeljni literatura in viri / Readings:

- I. Vidav: Uvod v teorijo C^* -algeber, DMFA-založništvo, Ljubljana, 1982.

Cilji in kompetence:

Slušatelj spozna osnove funkcionalne analize in povezavo z drugimi področji analize.

Objectives and competences:

Students learn the basics of functional analysis and links with other areas of analysis.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje: Obvladanje osnovnih pojmov funkcionalne analize. Sposobnost rekonstrukcije (vsaj lažjih) dokazov. Sposobnost aplikacije pridobljenega znanja.

Uporaba: Uporaba funkcionalne analize sega tudi v naravoslovje in druga področja znanosti kot na primer ekonomijo.

Refleksija: Razumevanje teorije na podlagi uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Sposobnost abstraktnega razmišljanja. Spretnost uporabe domače in tuje literature.

Knowledge and understanding: Understanding basic concepts of functional analysis. Ability of the reconstruction (at least easier) proofs. Ability of the application of acquired knowledge.

Application: Functional analysis is used in natural sciences and other areas of science such as economics.

Reflection: Understanding of the theory on the basis of examples.

Transferable skills: Ability to use abstract methods to solve problems. Ability to use a wide range of references and critical thinking.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vpis v letnik študija

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Cauchyjeva integralska formula za holomorfne in neholomorfne funkcije. Rešitev nehomogene debar enačbe na ravninskih območjih s Cauchyjevim integralom.

Schwarzova lema. Avtomorfizmi diska.

Konveksne funkcije. Hadamardov izrek o treh krožnicah. Phragmen-Lindelöfov izrek.

Kompaktnost in konvergenca v prostoru holomorfnih funkcij. Normalne družine.

Montelov izrek. Hurwitzev izrek. Riemannov upodobitveni izrek.

Koebejev izrek. Blochov izrek. Izrek Landaua, Picardovi izreki. Schottkyjev izrek.

Konvergenca produktov. Weierstrassov faktorizacijski izrek. Rungejev izrek o aproksimaciji z racionalnimi funkcijami. Mittag-Lefflerjev izrek o konstrukciji funkcije z danimi glavnimi deli. Izrek o interpolaciji s holomorfnimi funkcijami na diskretni množici.

Schwarzov princip zrcaljenja. Analitično nadaljevanje vzdolž poti. Monodromijski izrek. Kompletna analitična funkcija. Snop zarodkov holomorfnih funkcij. Pojem Riemannove ploskve.

Druge možne vsebine: Harmonične in subharmonične funkcije. Poissonovo jedro in rešitev Dirichletovega problema na krogu. Lastnosti Poissonovega integrala in povezava s Cauchyjevimi integrali. Mergelyanov izrek. Cele funkcije. Rast in red cele funkcije. Hadamardov izrek o faktorizaciji.

Cauchy integral formula for holomorphic and non holomorphic functions. Solution to the non homogeneous debar equation on planar domains using Cauchy integral.

Schwarz lemma. Automorphisms of the unit disc.

Convex functions. Hadamard three-circle theorem. Phragmen-Lindelöf theorem.

Compactness and convergence in the space of holomorphic functions. Normal families.

Montel's theorem. Hurwitz's theorem. Riemann mapping theorem.

Koebe's theorem. Bloch's theorem. Landau's theorem, Picard's theorem. Schottky's theorem.

Product convergence. Weierstrass factorization theorem. Runge's theorem on approximation by rational functions. Mittag-Leffler's theorem on existence of holomorphic functions with prescribed principal parts. Interpolation by holomorphic functions on discrete sets.

Schwarz reflection principle. Analytic continuation along path. Monodromy theorem. Complete analytic function. Sheaf of germs of analytic functions. Riemann surface.

Other possible topics: Harmonic and subharmonic functions. Poisson kernel and the solution of the Dirichlet problem on the disc. Properties of Poisson integral and connection to the Cauchy integral. Mergelyan theorem. Entire functions. The genus and the order of entire function. Hadamard factorization theorem.

Temeljni literatura in viri / Readings:

- L. Ahlfors: *Complex Analysis*, 3rd edition, McGraw-Hill, New York, 1979.
- C. A. Berenstein, R. Gay: *Complex Analysis and Special Topics in Harmonic Analysis*, Springer, New York, 1995.

- W. Rudin: *Real and Complex Analysis*, 3rd edition, McGraw-Hill, New York, 1987.
- T. Gamelin: *Complex analysis*, Springer-Verlag, New York, 2001.

Cilji in kompetence:

Slušatelj spozna nekatere vsebine teorije holomorfnih funkcij ene kompleksne spremenljivke. Pri tem uporabi znanje iz osnovne analize in topologije.

Objectives and competences:

Students learn some basic concepts of theory of functions of one complex variable. Elementary methods of analysis and topology are applied.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje nekaterih bistvenih pojmov in rezultatov teorije holomorfnih funkcij.

Uporaba: V ostalih delih matematične analize in geometrije; uporaba konformnih preslikav pri reševanju problemov iz fizike in mehanike.

Refleksija: Razumevanje teorije na podlagi primerov in uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Identifikacija, formulacija in reševanje matematičnih in nematematičnih problemov s pomočjo metod kompleksne analize. Spretnost uporabe domače in tuje literature. Privajanje na samostojno seminarsko predstavitev gradiva.

Intended learning outcomes:

Knowledge and understanding: Understanding some of the fundamental topics and techniques of complex analysis.

Application: Applications lie mainly in other parts of mathematical analysis and geometry. Conformal maps are applied to solving problems in physics and mechanics.

Reflection: Understanding the theory on the basis of examples and applications.

Transferable skills: The ability to identify, formulate and solve mathematical and non mathematical problems using methods of complex analysis. Acquiring skills in using domestic and foreign literature. Developing the skills of independent presentation of the material in the form of seminar lectures.

Metode poučevanja in učenja:

predavanja, vaje, seminar, domače naloge, konzultacije

Vrsta predmeta / Course type izbirni predmet/elective course

Univerzitetna koda predmeta / University course code: še ni dodeljena/not assigned yet

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
	30				150	6

Nosilec predmeta / Lecturer: doc. dr. George Mejak

Jeziki / Languages:

Predavanja / Lectures:	slovenski/Slovene, angleški/English
Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija.
Odobren načrt dela.

Prerequisites:

Enrollment into the program.
Approved work plan

Vsebina:

Content (Syllabus outline):

Identifikacija nalog iz realnega sveta.

Matematično modeliranje.

Numerične metode.

Primerjava modelne rešitve z nalogo iz realnega sveta.

Pisanje poročila.

Identification real world problems.

Mathematical modeling.

Numerical methods.

Comparison between a model solution and real problem.

Report writing.

Temeljna literatura in viri / Readings:

- E. Zakrajšek: *Matematično modeliranje*, DMFA-založništvo, Ljubljana, 2004.
- Capasso, *Mathematics in Industry*, Book series: Mathematics in Industry, Springer.
- C. Dym, *Principles of Mathematical Modeling*, Academic Press, 2004.
- S. Howison: *Practical Applied Mathematics: Modelling, Analysis, Approximation*, Cambridge Univ. Press, Cambridge, 2005.
- M. S. Klamkin: *Mathematical Modelling : Classroom Notes in Applied Mathematics*, SIAM, Philadelphia, 1987.

Cilji in kompetence:

Cilj predmeta je razviti sposobnosti sodelovanja matematika z nematematikami pri reševanju problemov iz realnega sveta.

Kompetence so: razvijanje sposobnosti komuniciranja s potencialnimi uporabniki matematičnih znanj, razvijanje sposobnosti skupinskega dela, sposobnost nadgrajevanja šolskih modelov, spretnost uporabe programskih orodij, z eno besedo, vzgoja industrijskih matematikov za potrebe trga dela.

Objectives and competences:

The aim of the course is to foster collaboration between mathematicians and non-mathematicians by solving problems from real world. The competences are: to promote communication with possible users of mathematical methods, to promote team work, to extend academic examples to a real world problems, to acquire some knowledge of mathematical software; summarizing, to educate Industrial Mathematicians to meet the growing demand for such experts.

Predvideni študijski rezultati:

Znanje in razumevanje:

Sposobnost komuniciranja z uporabniki matematičnih znanj, sposobnost formuliranja problemov, razumevanje matematičnega modeliranja.

Uporaba:

Intended learning outcomes:

Knowledge and understanding:

Knowledge how to communicate with users of mathematical methods, ability to rationally formulate problems, knowledge of mathematical modeling.

Application:

Reševanje problemov iz realnega sveta.
Povezava z uporabniki matematičnih znanj.

Refleksija:

Refleksija lastnega razumevanja pridobljenih matematičnih znanj na problemih iz prakse, kritično ovrednotenje skladnosti med teoretičnimi načeli in dejanskim stanjem v praksi.

Prenosljive spretnosti – niso vezane le na en predmet:

Spretnost uporabe virov znanja, zbiranja in interpretacije podatkov, sodelovanja s strokovnjaki iz drugih področij; skupinsko delo, poročanje o rezultatih dela, pisanje poročil.

Solving real word problems. Cross breeding with users of mathematical methods.

Reflection:

Reflection of own understanding of mathematical knowledge by solving problems from a real world. Critical assesment of differences between theoretical and practical principles.

Transferable skills:

How to use knowledge bases, how to collect and interpret data, collaboration with experts from different areas; team work, how to present results, how to write reports.

Metode poučevanja in učenja:

Projektno delo, delo na terenu, individualen študij, seminarji, nastopi.

Learning and teaching methods:

Project working, field work, consultations, individual study, presentations.

Načini ocenjevanja:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):
▪ Projektno poročilo
▪ Predstavitev poročila

Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

Delež (v %) /
Weight (in %)

50%
50%

Assessment:

Type (examination, oral, coursework, project):
▪ Project
▪ Project presentation

Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)

Vaje / Tutorial:	slovenski/Slovenian, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Kinematika. Deformacija, deformacijski tenzor. Green-Lagrangeev in Almansi-jev tenzor. Levi in desni Cauchy-Greenov deformacijski tenzor. Geometrijska linearizacija. Kompatibilnostni pogoji. Enačbe polja. Cauchyjev, prvi in drugi Piolla-Kirchhoffov napetostni tenzor. Enačbe gibanja v prostorskem in materialnem zapisu. Energijska enačba. Termodinamika, Clausius-Duhemova neenačba. Termodinamični potenciali, funkcija disipacije.

Content (Syllabus outline):

Kinematics of deformation. Deformation tensor. Green-Lagrange and Almansi tensor. Left and right Cauchy-Green deformation tensor. Geometric linearization. Conditions of compatibility. Field equations. Cauchy stress tensor, first and second Piolla-Kirchhoff stress tensor. Momentum balance in material and spatial formulation. Energy balance. Thermodynamics and Clausius-Duhem inequality. Thermodynamic potentials, dissipation

Linearni modeli. Geometrijsko in materialno linearni modeli. Elastičnost. Posplošeni Hookov zakon. Princip materialne simetrije.

Anizotropni material. **Kristalografske simetrijske grupe.**

Problemi v \mathbf{R}^2 . Ravninsko stanje napetosti, deformacij. Airyjeva napetostna funkcija. Flamantova rešitev za koncentrirano silo. Koncentracije napetosti.

Problemi v \mathbf{R}^3 . Naviereve enačbe. Rešitve s potenciali. Beltrami-Mitchellove enačbe. Singularne rešitve. Greenova funkcija za izotropni elastični prostor. Variacijski in komplementarni variacijski princip. Ritzova in Galerkinova metoda.

Nelinearni modeli. Geometrijsko in materialno nelinearni modeli. Elastični potencial in funkcije deformacijske energije.

Hiperelastičnost. Hipoelastičnost. Primeri uporabe v biomehaniki. Ireverzibilne deformacije. Plastičnost. Vezani problemi. Termoelastičnost. Splošni termodinamični principi. Reološka transformacija. Enačba stanja. Termoviskoplastičnost.

function.

Linear models. Geometrically and materially linear models. Elasticity. Generalized Hooke's law. Principle of material symmetry. Anisotropic material. Crystal symmetry groups.

Problems in \mathbf{R}^2 . Plane stress and plane strain. Airy stress function. Flamant's solution for concentrated force. Stress concentration. Problems in \mathbf{R}^3 . Navier's equations. Solutions with potentials. Beltrami-Mitchell's equations. Singular solutions. Green's function for isotropic elastic space.

Variational and complementary variational principle. Method of Ritz and Galerkin.

Nonlinear models. Geometrically and materially nonlinear models. Elastic potential and deformation energy functions. Hyperelasticity. Hypoelasticity. Applications in biomechanics. Irreversible deformations. Plasticity. Coupled problems. Thermoelasticity. Generalized thermodynamical principles. Rheological transformation. Equations of state. Thermoviscoplasticity.

Temeljni literatura in viri / Readings:

- **R. J. Asaro, V. A. Lubarda: *Mechanics of Solids and Materials*, Cambridge University Press, New York, 2006.**

Cilji in kompetence:

Predstavitev osnovnih pojmov in vsebin mehanike deformabilnih teles s poudarkom na korektni matematični formulaciji in povezovanju predhodno osvojenih matematičnih znanj.

Objectives and competences:

An overview of fundamental facts and ingredients of mechanics of deformable bodies with emphasis on strict mathematical formulation based on previously mastered mathematical knowledge.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje: Poznavanje in razumevanje osnovnih pojmov in principov mehanike deformabilnih teles.

Uporaba: Osnova za nadaljnje raziskovalno delo in specialistični študij na področju mehanike.

Refleksija: Povezovanje osvojenega matematičnega znanja v okviru enega predmeta in njegova uporaba na področju mehanike.

Prenosljive spretnosti – niso vezane le na en predmet: Celovit pogled na mehaniko deformabilnih teles v okviru mehanike kontinuuma. Reševanje problemov iz sorodnih področij mehanike materialov.

Knowledge and understanding:

To establish knowledge and understanding of fundamental principles of mechanics of deformable bodies.

Application: Mastered coursework represents a foundation for specialized research in the field of mechanics.

Reflection: Connecting acquired mathematical knowledge within the course with application of that knowledge in a general field of mechanics.

Transferable skills:

An overview of mechanics of deformable bodies within a general framework of continuum mechanics. Solving problems from related areas of mechanics of materials.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije, seminar

Learning and teaching methods:

Lectures, exercises, homeworks, consultations, seminar

Načini ocenjevanja:

Delež (v %) /

Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

Ustni in pisni zagovor teoretičnega dela vključno s seminarskimi nalogami. Končna ocena je kombinacija navedenega zgoraj.

Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

100%

Type (examination, oral, coursework, project):

Oral and written defense of theoretical part including seminar assignments. Grade is combination of the above.

Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)

Nosilec predmeta / Lecturer: doc. dr. George Mejak

Jeziki / Languages: **Predavanja / Lectures:** slovenski/Slovene, angleški/English
Vaje / Tutorial: slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vpis v letnik študija

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Kinematika mehanike fluidov:

Eulerjev opis gibanja. Tenzor deformacijskih hitrosti. Materialni odvod in transportni izrek. Tokovnice, tirnice, slednice in vrtnčnice.

Fizikalno mehanske osnove:

Pojem površinske sile in napetostnega tenzorja. Zakon o ohranitvi mase. Cauchyjeva momentna enačba. Termodinamični principi. Konstitutivna zveza med napetostjo in tenzorjem deformacijskih hitrosti. Hidrostatika.

Newtonovi fluidi:

Pojem viskoznosti. Navier-Stokesova enačba. Primeri laminarnega viskoznega toka; ravninski Coettov tok, Poiseuillev tok, Stokesova naloga. Difuzija in konvekcija vrtnčnosti. Turbulenca.

Idealen fluid:

Eulerjeva enačba. Bernoullijev izrek. Potencialni tok nestisljivega fluida. Reševanje ravninskega potencialnega toka z metodo kompleksnih potencialov. Potencialni tok stisljivega fluida, akustična aproksimacija.

Pregled numeričnih metod reševanja enačb mehanike fluidov:

Ohranitveni zapis enačb gibanja. Metoda končnih volumnov. Pregled osnovnih modelnih primerov.

Kinematics of the fluid flow:

Eulerian description. Rate of deformation tensor. Material derivative and transport theorems. Stream lines, pathlines, streak lines, vortex lines.

Physical properties of fluids:

Stress vector and tensor. Mass conservation law. Momentum equation. Thermodynamical principles. Constitutive relation. Hydrostatics.

Newtonian fluids:

Viscosity. Navier-Stokes equation. Examples of laminar flow, plane Coette flow, Poiseuille flow, Stokes problem. Diffusion and convection of the vorticity. Turbulence.

Ideal fluids:

Eulerian equation. Bernoulli's theorem. Potential flow of incompressible fluid. Complex variable methods. Compressible fluid. Acoustic approximation.

Review of numerical methods in fluid mechanics:

Equations in conservative forms. Finite volume method. Benchmark problems.

Temeljni literatura in viri / Readings:

- L. Škerget: *Mehanika tekočin*, Fakulteta za strojništvo, Ljubljana, 1994.
- G.K. Batchelor, *An introduction to Fluid Dynamics*, Cambridge University Press, 1967.

- J. H. Spurk: *Fluid Mechanics : Problems and Solutions*, Springer, Berlin, 1997.

Cilji in kompetence:**Objectives and competences:**

Cilj predmeta je pridobiti osnovna znanja s področja mehanike fluidov. Pridobljeno znanje omogoča nadaljni samostojni študij mehanike fluidov.

The goal is to obtain basic knowledge of fluid mechanics. Acquired knowledge allows further individual study of fluid mechanics.

Predvideni študijski rezultati:

Znanje in razumevanje:

Poznavanje in razumevanje osnovnih pojmov in principov iz mehanike fluidov

Uporaba:

Temelj za nadgraditev osvojenega znanja s specifičnimi znanji iz prakse s področja mehanike fluidov. Osnova za nadaljnji specialistični študij mehanike fluidov.

Refleksija:

Povezovanje osvojenega matematičnega znanja v okviru enega predmeta in njihova uporaba na področju mehanike fluidov.

Prenosljive spretnosti – niso vezane le na en predmet:

Celovit pogled na mehaniko fluida v okviru mehanike kontinuuma. Sposobnost reševanja nalog in problemov iz sorodnih področij uporabne matematike.

Intended learning outcomes:

Knowledge and understanding:

Knowledge and understanding of basic principles of fluid mechanics.

Application:

Application of the acquired knowledge in solving real-life problems of fluid mechanics. First step for further graduate level study of fluid mechanics.

Reflection:

Crossbreeding of different mathematical subjects within a single course and their application in the field of fluid mechanics.

Transferable skills:

Understanding of fluid mechanics in the context of the continuum mechanics. Ability of solving related problems from the applied mathematics.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:

Content (Syllabus outline):

Prostori odvedljivih funkcij. Hölderjevi prostori. Schwartzov razred hitro padajočih funkcij. Testne funkcije. Distribucije. Prostori Soboljeva. Osnovna rešitev. Karakteristike linearnega parcialnega diferencialnega operatorja. Cauchyeva naloga. Izrek Cauchy-Kowalevski. Lewyjeve primer.

Laplaceva enačba. Newtonov potencial kot osnovna rešitev Laplaceve enačbe. Dirichletov problem. Subharmonične funkcije. Perronova metoda. Šibke rešitve Dirichletevega problema. Lastne funkcije in lastne vrednosti Laplaceovega operatorja. Regularnost rešitev.

Toplotna enačba v višjih dimenzijah. Gaussovo jedro. Fundamentalna rešitev toplotne enačbe. Nehomogena toplotna enačba. Weierstrassov izrek. Toplotna enačba na omejenih območjih. Princip maksima. Fourierova metoda separacij spremenljivk.

Valovna enačba v višjih dimenzijah. Sferična povprečja. Valovna enačba v ravnini in prostoru. Fundamentalna rešitev valovne enačbe. Rešitve nehomogene valovne enačbe. Valovna enačba na omejenih območjih. Fourierova metoda separacij spremenljivk.

Spaces of differentiable functions. Hölder spaces. Schwarz class of rapidly decreasing functions. Test functions. Distributions. Sobolev spaces. Fundamental solution. Characteristics of linear partial differential operator. Cauchy problem. Cauchy-Kowalevski theorem. Lewy's example.

Laplace equation. Newton potential as fundamental solution of the Laplace equation. Dirichlet problem. Subharmonic functions. Perron method. Weak solutions of the Dirichlet problem. Eigenfunctions and eigenvalues of the Laplace operator. Regularity of solutions.

The heat equation in higher dimensions. Gauss kernel. Fundamental solution of the heat equation. Inhomogeneous heat equation. Weierstrass theorem. The heat equation on bounded domains. Maximum principle. Fourier method of separation of variables.

The wave equation in higher dimensions. Spherical means. The wave equation in the space and in the plane. Fundamental solution of the wave equation. Inhomogeneous wave equation. The wave equation on bounded domains. Fourier method of separation of variables.

- M. E. Taylor: *Partial differential equations I: Basic theory*, 2nd edition, Springer, New York, 2011

Cilji in kompetence:

Slušatelj se seznani s parcialnimi diferencialnimi enačbami v poljubni dimenziji. Predstavljene so distribucije kot posplošene rešitve linearnih parcialnih diferencialnih enačb. Dokazani so eksistenčni izreki za Laplaceovo, toplotno in valovno enačbo ter osnovne regularnostne lastnosti njihovih rešitev.

Objectives and competences:

Student becomes familiar with partial differential equations in arbitrary dimensions. Introduced are distributions as generalized solutions of linear partial differential equations. Proved are existence and basic regularity theorems for solutions of the Laplace equation, the heat equation and the wave equation.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje pojma posplošene rešitve parcialne diferencialne enačbe. Obvladanje postopkov za analitično reševanje nekaterih tipov parcialnih diferencialnih enačb v poljubni dimenziji. Razumevanje lastnosti rešitev različnih parcialnih diferencialnih enačb drugega reda.

Uporaba: Formulacija nekaterih matematičnih in nematematičnih problemov v obliki parcialnih diferencialnih enačb. Reševanje dobljenih parcialnih diferencialnih enačb.

Refleksija: Razumevanje teorije na podlagi uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Identifikacija, formulacija in reševanje matematičnih in nematematičnih problemov s pomočjo parcialnih diferencialnih enačb. Spretnost uporabe domače in tuje literature.

Intended learning outcomes:

Knowledge and understanding: Understanding the notion of a generalized solution of a partial differential equation. Skills to analytically find solutions of certain types of partial differential equation in higher dimensions. Understanding the properties of solutions of different types of second order partial differential equations.

Application: Formulation of certain mathematical and non-mathematical problems in the form of partial differential equations. Solving these partial differential equations.

Reflection: Understanding of the theory from the applications.

Transferable skills: The ability to identify, formulate, analyze and solve mathematical and non-mathematical problems with the help of partial differential equations. Skills in using the domestic and foreign literature.

Predavanja / Lectures:
Vaje / Tutorial:

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:

Content (Syllabus outline):

Osnovni pojmi Liejeve teorije, predstavljeni na primerih matričnih grup in algeber. Osnovni pojmi teorije upodobitev kompaktnih Liejevih grup. Upodobitve grupe $SU(2)$.

Splošni pojem specialne funkcije na kompaktni Liejevi grupi. **Karakteristične funkcije upodobitev**. **Ortogonalnostne relacije**. Peter-Weylov izrek.

Sferne funkcije kot **reprezentacijske funkcije**, pripadajoče upodobitvam grupe $SU(2)$. Legendrovi polinomi in njihove lastnosti.

Laplaceov operator v različnih koordinatah. Laplaceova enačba in sferne funkcije. Besselove funkcije.

Diferencialne enačbe v kompleksnem. Riemannova in hipergeometrična enačba. Hipergeometrična funkcija. Zveza med hipergeometrično funkcijo in sfernimi funkcijami.

Linearni diferencialni operatorji. **Posplošene** Fourierjeve vrste in pojem šibke rešitve. Diferencialni operatorji drugega reda in sistemi njihovih lastnih vektorjev.

Elementary Lie theory of matrix groups and algebras. Fundamental concepts of the theory of representations of compact Lie groups. Representations of the group $SU(2)$. Special functions as representative functions on compact matrix groups. Characters of representations. Orthogonality relations. Peter-Weyl theorem. Spherical harmonics as the representative functions of the group $SU(2)$. Legendre polynomials and their properties. Laplace operator in various coordinate systems. Laplace equation and spherical harmonics. Bessel functions. Complex differential equations. Riemann and hypergeometric equations. Hypergeometric function. Relation between the hypergeometric function and spherical harmonics. Linear differential operators. Generalized Fourier series and weak solutions. Differential operators of the Sturm-Liouville type and the associated eigenproblems.

Temeljni literatura in viri / Readings:

- S. Helgason: *Invariant Differential Operators and Eigenvalue Representations*, v *Representation Theory of Lie Groups*, Cambridge Univ. Press, Cambridge, 1980.

Cilji in kompetence:

Študent spozna na poenoten način nekatere pomembne razrede specialnih funkcij. Seznan se z nekaterimi pomembnimi uporabami teh funkcij v matematiki in fiziki. Predstavljena je povezava teorije specialnih funkcij s tremi matematičnimi področji: s teorijo upodobitev Liejevih grup, s parcialnimi diferencialnimi enačbami in s teorijo linearnih diferencialnih operatorjev. Opisane so tudi osnove teorije

Objectives and competences:

In the course some important classes of special functions are introduced. Some important applications of these functions in mathematics and physics are described. Special functions are considered from three different viewpoints: from the viewpoint of the representation theory of Lie groups, through the theory of differential equations and by means of the theory of differential operators and their

diferencialnih enačb v kompleksnem s poudarkom na hipergeometrični enačbi in hipergeometrični funkciji.

eigenproblems. Fundamental concepts of the theory of complex differential equations with the emphasis on the hypergeometric equation are presented.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje najpomembnejših razredov specialnih funkcij in njihovih lastnosti. Poznavanje najpomembnejših uporab teh funkcij. Na primeru specialnih funkcij študent vidi enotnost matematike, oziroma tesno povezanost različnih matematičnih področij.

Poudarjena je pomembnost pojma simetrije v teoriji diferencialnih enačb.

Uporaba: Reševanje nekaterih težjih matematičnih in fizikalnih problemov, katerih rešitve niso izrazljive z elementarnimi funkcijami.

Refleksija: Razumevanje teorije na podlagi uporabe. Razumevanje povezav med različnimi področji matematike na konkretnem primeru..

Prenosljive spretnosti – niso vezane le na en

predmet: Sposobnost uporabe širokega spektra različnih funkcij in z njimi povezanih diferencialnih enačb pri reševanju matematičnih in nematematičnih problemov. Študentovo znanje sega izven relativno omejenega sveta elementarnih funkcij.

Intended learning outcomes:

Knowledge and understanding: Familiarity with the most important classes of special functions. Understanding some important applications of these functions. Special functions provide a setting where elements of various mathematical fields merge into a unique theory.

The fundamental importance of the notion of symmetry in the theory of differential equations is discussed.

Application: Solving of some advanced mathematical and physical problems whose solutions cannot be expressed in terms of the elementary functions.

Reflection: Mastering the theory through its applications. Understanding various connections among different mathematical theories.

Transferable skills: Ability to use a vast variety of special functions and of the related differential equations in solving mathematical and non-mathematical problems. Students extend their horizon beyond the relatively limited realm of the elementary functions.

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Mere: σ -algebre, pozitivne mere, zunanje mere, Caratheodoryjev izrek, razširitev mere iz algebre na sigma algebro, Borelove mere na \mathbf{R} , Lebesguova mera na \mathbf{R} .

Merljive funkcije: aproksimacija s stopničastimi funkcijami, načini konvergence funkcijskih zaporedij, izrek Jegorova.

Integracija: integral nenegativne funkcije, izrek o monotoni konvergenci, Fatoujeva lema, integral kompleksne funkcije, izrek o dominirani konvergenci, primerjava Riemannovega in Lebesguovega integrala, izrek Jegorova.

Produktne mere: konstrukcija produktnih mer, monotoni razredi, Tonellijev in Fubinijev izrek, Lebesguov integral na \mathbf{R}^n .

Kompleksne mere: predznačene mere, Hahnov in Jordanov razcep, kompleksne mere, variacija mere, absolutna zveznost in vzajemna singularnost, Lebesgue-Radon-Nikodymov izrek.

L^p -prostori: neenakosti Jensena, Hölderja in Minkovskega, omejeni linearni funkcionali, dualni prostori.

Integriranje na lokalno kompaktnih prostorih: pozitivni linearni funkcionali na $C_c(X)$, Radonove mere, Rieszov izrek, Lusinov izrek, gostost prostora $C_c(X)$ v L^p -prostorih.

Odvajanje mer na \mathbf{R}^n : odvajanje mer, absolutno zvezne in funkcije z omejeno totalno variacijo.

Measures: σ -algebras, positive measures, outer measures, Caratheodory's theorem, extension of measures from algebras to σ -algebras, Borel measures on \mathbf{R} , Lebesgue measure on \mathbf{R} .

Measurable functions: approximation by step functions, modes of convergence of sequences of functions, Egoroff's theorem.

Integration: integration of nonnegative functions, Lebesgue monotone convergence theorem, Fatou's lemma, integration of complex functions, Lebesgue dominated convergence theorem, comparison with Riemann's integral.

Product measures: construction of product measures, monotone classes, Tonelli's and Fubini's theorem, the Lebesgue integral on \mathbf{R}^n .

Complex measures: signed measures, the Hahn and the Jordan decomposition, complex measures, variation of a measure, absolute continuity and mutual singularity, the Lebesgue-Radon-Nikodym theorem.

L^p -spaces: inequalities of Jensen, Hölder and Minkovski, bounded linear functionals, dual spaces.

Integration on locally compact spaces: positive linear functionals on $C_c(X)$, Radon measures, Riesz representation theorem, Lusin's theorem, density of $C_c(X)$ in L^p -spaces.

Differentiation of measures on \mathbf{R}^n : differentiation of measures, absolutely continuous and functions of bounded variation,

Cilji in kompetence:

Študent pridobi znanje osnov teorije mere, ki jih potrebuje za razumevanje osnov sodobnega verjetnostnega računa, statistike in funkcionalne analize.

Objectives and competences:

Students acquire basic knowledge of measure theory needed to understand probability theory, statistics and functional analysis.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje osnovnih pojmov teorije mere.

Uporaba: Teorija mere sodi med temeljne predmete na 2. stopnji študija matematike, saj je nujno potrebna za razumevanje osnov sodobnega verjetnostnega računa, statistike in funkcionalne analize. Poleg tega njena uporaba sega tudi v naravoslovje in druga področja znanosti kot na primer ekonomijo.

Refleksija: Razumevanje teorije na podlagi primerov uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Sposobnost abstraktnega razmišljanja. Spretnost uporabe domače in tuje literature.

Intended learning outcomes:

Knowledge and understanding: understanding basic concepts of measure and integration theory.

Application: measure theory is a part of the basic curriculum of the graduate study of mathematics since it is needed in other areas, for example, in probability calculus, statistics and functional analysis. It is useful also in other sciences, for example in economy.

Reflection: understanding of the theory on the basis of examples of application.

Transferable skills: Ability to use abstract methods to solve problems. Ability to use a wide range of references and critical thinking.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija in poznavanje osnov funkcionalne analize.

Prerequisites:

Enrollment into the program and basic knowledge of functional analysis.

Vsebina: Content (Syllabus outline):

Banachove algebre: ideali, kvocienti, holomorfen funkcijski račun, šibka* topologija in Banach Alaoglujev izrek, Gelfandova transformacija.

C*-algebre: urejenost, približna enota, ideali in kvocienti, karakterizacija komutativnih C*-algeber, zvezen funkcijski račun, stanja in upodobitve, univerzalna upodobitev.

Operatorske topologije in aproksimacijski izreki: von Neumannov o bikomutantu, Kaplanskega o gostosti in Kadisonov o tranzitivnosti.

Spektralni izrek za omejene normalne operatorje: Borelov funkcijski račun, komutativne von Neumannove algebre, grupna algebra $L^1(G)$.

Banach algebras: ideals, quotients, holomorphic functional calculus, weak* topology, Banach Alaoglu's theorem, Gelfand's transform.

C*-algebras: order, approximate units, ideals, quotients, the characterization of commutative C*-algebras, continuous functional calculus, states and representations, the universal representation.

Operator topologies and approximation theorems: von Neumann's bicommutation theorem, Kaplansky's density theorem and Kadison's transitivity theorem.

The spectral theorem for bounded normal operators: the Borel functional calculus, commutative von Neumann algebras, the group algebra $L^1(G)$.

Temeljni literatura in viri / Readings:

- I. Vidav: *Uvod v teorijo C*-algeber*, DMFA-založništvo, Ljubljana, 1982.
- N. Weaver: *Mathematical Quantization*, Chapman & Hall/CRC, London, 2001.

Cilji in kompetence:

Spoznati osnovna orodja spektralne teorije in njihovo uporabo v C*-algebrah.

Objectives and competences:

To master basic tools of spectral theory and their use in C*-algebras.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje: pridobljeno osnovno znanje o C^* -algebrah bo koristilo tudi izven matematike, npr. pri razumevanju kvantne fizike.

Uporaba: Pridobljeno znanje bo uporabno tudi drugod v matematični analizi in matematični fiziki.

Refleksija: C^* -algebre so eno temeljnih aktivnih področij sodobne matematike.

Prenosljive spretnosti – niso vezane le na en predmet:

Formulacija in reševanje problemov z abstraktnimi metodami.

Knowledge and understanding: the basic knowledge on C^* -algebras may be useful also outside of mathematics, for example, it may facilitate the understanding of quantum physics.

Application: The acquired knowledge is applicable elsewhere in mathematics and mathematical physics.

Reflection: C^* -algebras are one of the basic active fields of modern mathematics.

Transferable skills:

An approach to problems using abstract methods.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homeworks, consultations

Načini ocenjevanja:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

- izpit iz vaj (2 kolokvija ali pisni izpit)
- ustni izpit

Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

Delež (v %) /
Weight (in %)

50%

50%

Assessment:

Type (examination, oral, coursework, project):

- 2 midterm exams instead of written exam, written exam
- oral exam

Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Hilbertovi prostori. Ortonormirani sistemi. Besslova neenakost. Kompletnost. Fourierove vrste. Parsevalova enakost.

Linearni operatorji in funkcionali na Hilbertovih prostorih.

Reprezentacija zveznega linearnega funkcionala.

Adjungirani operator. Sebiadjungirani in normalni operatorji.

Projektorji in idempotenti. Invariantni podprostori.

Kompaktni operatorji. Spekter kompaktne operatorja.

Diagonalizacija kompaktne sebiadjungirane operatorja.

Uporaba: Sturm-Liouville sistemi.

Banachovi prostori. Primeri.

Linearni operatorji in funkcionali na Banachovih prostorih.

Končnorazsežni normirani prostori. Kvocienti in produkti normiranih prostorov.

Hahn-Banachov izrek in posledice. Separacija konveksnih množic.

Hilbert spaces. Orthonormal systems. Bessel's inequality. Completeness. Fourier series. Parseval's identity.

Linear operators and functionals on Hilbert spaces.

The representation of a continuous linear functional.

Adjoint operator. Selfadjoint and normal operators.

Projectors and idempotents. Invariant subspaces.

Compact operators. The spectrum of a compact operator.

Diagonalization of a selfadjoint compact operator.

An application: Sturm-Liouville systems.

Banach spaces. Examples.

Linear operators and functionals on Banach spaces.

Finite dimensional normed spaces. Quotients and products of normed spaces.

The Hahn-Banach theorem and consequences.

Separation of convex sets.

Temeljni literatura in viri / Readings:

Cilji in kompetence:

Objectives and competences:

Študent spozna osnovne pojme teorije Hilbertovih prostorov in linearnih operatorjev med njimi. Z njeno uporabo se seznanijo pri reševanju Sturm-Liouville problema.

Nekoliko spozna tudi teorijo Banachovih prostorov, ki so posplošitev Hilbertovih prostorov.

Students acquire basic knowledge of the theory of Hilbert spaces and linear operators between them. The theory is applied for solving simple Sturm-Liouville problems. Students also learn some basic concepts from the theory of Banach spaces, which are a generalization of Hilbert spaces.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje teorije Hilbertovih prostorov s teoretičnega in uporabnega vidika.

Uporaba: Uporaba funkcionalne analize sega tudi v naravoslovje in druga področja znanosti kot na primer ekonomijo.

Refleksija: Razumevanje teorije na podlagi uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Sposobnost abstraktnega razmišljanja. Spretnost uporabe domače in tuje literature.

Intended learning outcomes:

Knowledge and understanding: Understanding of the theory of Hilbert spaces.

Application: Functional analysis is used in natural sciences and other areas of science such as economics.

Reflection: Understanding of the theory on the basis of examples.

Transferable skills: Ability to use abstract methods to solve problems. Ability to use a wide range of references and critical thinking.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Vpis v letnik študija

Enrollment into the program

Vsebina: _____ **Content (Syllabus outline):** _____

Predavatelj/ica izbere nekatere pomembne teme iz diskretne matematike, kot npr.:

Delno urejene množice.

Ramseyeva teorija.

Matroidi.

Diskretna geometrija.

Načrti in konfiguracije.

Simetrični grafi.

Simetrije kombinatoričnih objektov.

Simetrične funkcije.

Kombinatorno preštevanje.

Diskretna verjetnost.

Metrična teorija grafov.

Teorija dominacije.

Problem hanojskega stolpa.

Pri tem si prizadeva minimizirati prekrivanje z drugimi predmeti tega študijskega programa.

The lecturer selects some important topics in discrete mathematics, such as:

Partially ordered sets.

Ramsey theory.

Matroids.

Discrete geometry.

Designs and configurations.

Symmetric graphs.

Symmetries of combinatorial objects.

Symmetric functions.

Combinatorial enumeration.

Discrete probability.

Metric graph theory.

Domination theory.

The Tower of Hanoi problem.

Special care should be taken to minimize overlap with other courses in this program.

Temeljni literatura in viri / Readings:

- R. L. Graham, M. Grötschel and L. Lovász, editors: *Handbook of Combinatorics*, Elsevier Science B.V., Amsterdam; MIT Press, Cambridge, MA, 1995

Predavatelj poleg tega lahko izbere tudi primerne novejšje raziskovalne članke iz znanstvenih revij.

Cilji in kompetence:

Študent spozna nekatera pomembna področja diskretne matematike, kot so delno urejene množice, diskretna geometrija, diskretna verjetnost, razčlenitve in simetrične funkcije.

Objectives and competences:

Students encounter some of the important areas of discrete mathematics, such as partially ordered sets, discrete geometry, discrete probability, partitions, and symmetric functions.

Predvideni študijski rezultati:

Znanje in razumevanje: Študentje se seznanijo s tematiko, metodami in glavnimi rezultati različnih področij diskretne matematike.

Uporaba: Študent bo znal pridobljeno znanje uporabiti v različnih matematičnih in drugih kontekstih.

Intended learning outcomes:

Knowledge and understanding: Students get acquainted with the subject matter, the methods, and the main results of various areas of discrete mathematics.

Application: Students will be able to use their knowledge in different mathematical and other

Refleksija: Študentje spoznajo in razumejo medsebojno prepletanje in oplajanje različnih področij diskretne matematike.

Prenosljive spretnosti – niso vezane le na en predmet: Študentje spoznajo nekatere metode, uporabne pri konstrukciji in analizi diskretnih matematičnih modelov .

contexts.

Reflection: Students comprehend the interplay and mutual enrichment of various areas of discrete mathematics.

Transferable skills: Students learn methods which are useful in construction and analysis of discrete mathematical models.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

- Richard P. Stanley: Enumerative Combinatorics, Vol. 2, Cambridge University Press, New York-Cambridge, 1999.

Cilji in kompetence:

Slušatelj spozna predstavljene teme.

Objectives and competences:

Students become acquainted with the presented topics.

Predvideni študijski rezultati:

Znanje in razumevanje: Študent bo razumel predstavljene koncepte in rezultate.

Uporaba: Študent bo znal pridobljeno znanje uporabiti v različnih matematičnih in drugih kontekstih.

Refleksija: Pridobljeno znanje bo študent znal kritično reflektirati.

Prenosljive spretnosti – niso vezane le na en predmet: Veščina kritičnega mišljenja, prepoznavanje diskretnih struktur v naravi in

Intended learning outcomes:

Knowledge and understanding: Student will understand the presented topics and results.

Application: Student will know how to use the new knowledge in different mathematical and other contexts.

Reflection: Student will be able to critically reflect the topic.

Transferable skills: Skill of critical thought, identification of discrete structures in nature and society.

družbi.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homeworks, consultations

Načini ocenjevanja:

Način (domače naloge, pisni izpit, ustno izpraševanje, naloge, projekt):

- domače naloge ali projekt
- pisni izpit
- ustni izpit

Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

Delež (v %) /

Weight (in %)

Assessment:

Type (homeworks, examination, oral, coursework, project):

- homeworks or project
- written exam
- oral exam

Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)

- N. Prijatelj: *Matematične strukture I*, DMFA-založništvo, Ljubljana, 1996.

Cilji in kompetence:

Poglobliti temeljno znanje o aksiomatski teoriji množic ter se seznaniti z osnovami ordinalne in kardinalne aritmetike.

Objectives and competences:

Improvement of knowledge of axiomatic set theory and acquaintance with the basics of ordinal and cardinal arithmetic.

Predvideni študijski rezultati:

Znanje in razumevanje:

Razumevanje in uporaba aksiomatske teorije množic ter ordinalne in kardinalne aritmetike.

Uporaba:

Teorija množic je temeljno matematično področje, ki priskrbi osnovni jezik za druga področja. V tem okviru so Zornova lema in ordinalna ter kardinalna števila nepogrešljiva orodja, uporabna širom matematike, zanimiva pa so tudi za nekatere filozofe.

Refleksija:

Teorija množic združuje vse matematične vede v celoto.

Prenosljive spretnosti – niso vezane le na en predmet:

Ker za razumevanje predmeta ne bo potrebno kako predhodno specialistično predznanje, bo

Intended learning outcomes:

Knowledge and understanding:

Understanding and application of axiomatic set theory and ordinal and cardinal arithmetic.

Application:

Set theory is a fundamental branch of mathematics that provides the common language of mathematics. The Zorn lemma, ordinal and cardinal numbers are thus basic tools that find applications everywhere in mathematics. They are also interesting for philosophers.

Reflection:

Set theory provides a unifying approach to mathematics.

Transferable skills:

As no specific technical knowledge is necessary to follow the course, it is generally useful for

zelo primeren tudi za učenje in vadbo matematičnega razmišljanja.

development of mathematical technique and practice of mathematical thinking.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

- o Jack H. van Lint, Robin J. Wilson: *A Course in Combinatorics*, Cambridge University Press, Cambridge, 2001.

Cilji in kompetence:

Študent spozna glavne tehnike kombinatornega preštevanja.

Objectives and competences:

The student learns the main techniques of enumerative combinatorics.

Predvideni študijski rezultati:

Znanje in razumevanje: Študentje poznajo in razumejo vlogo rodovnih funkcij in algebrskih struktur pri študiranju kombinatornih problemov.

Uporaba: Študentje znajo uporabljati teorijo rodovnih funkcij in algebrskih struktur za reševanje kombinatornih problemov.

Refleksija: Študentje spoznajo povezavo med strukturo kombinatornega problema in algebraično naravo pripadajočih rodovnih funkcij oziroma drugih struktur.

Prenosljive spretnosti – niso vezane le na en predmet: Uporaba rodovnih funkcij v verjetnosti; poglobljeno razumevanje klasične Möbiusove funkcije; delovanje grup na množici.

Intended learning outcomes:

Knowledge and understanding: Students understand the role of generating functions and algebraic structures in the study of combinatorial problems.

Application: Students know how to use generating functions and algebraic structures to solve combinatorial problems.

Reflection: The students learn the connection between the structure of the combinatorial problem and the algebraic nature of the corresponding generating functions and other structures

Transferable skills:

Applications of generating functions in probability; a deeper understanding of the classical Möbius function; action of a group on a set.

Nosilec predmeta / Lecturer:

Jeziki / Languages:
Predavanja / Lectures:
Vaje / Tutorial:

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:

Content (Syllabus outline):

Osnovni del:

Komutativni kolobar, spekter kolobarja. Nilradikal in Jacobsonov radikal.

Moduli, podmoduli in homomorfizmi. Operacije na modulih, direktna vsota in produkt. Končno generirani moduli. Eksaktna zaporedja. Tenzorski produkt modulov in njegove eksaktnostne lastnosti. Razširitev in zožitev skalarjev. Algebre in njihovi tenzorski produkti.

Noetherski kolobarji, Hilbertov izrek o bazi. Izrek o noetherski normalizaciji.

Hilbertov izrek o ničlah, topologija Zariskega.

Kolobarji ulomkov, lokalizacija.

Primarni razcep. Prirejani praideali, primarne komponente, izreka o enoličnosti.

Izbirne vsebine:

Valuacijski kolobarji.

Filtracija. Artin-Reesova lema.

Napolnitev in Henselova lema.

Uvod v teorijo dimenzije.

Polinomi, Gröbnerjeve baze.

Basics:

Commutative ring, spectrum. Nilradical and Jacobson radical.

Modules, submodules and homomorphisms. Module operations, direct sum and product. Finitely generated modules. Exact sequences. Tensor product of modules and its exactness properties. Restriction and extension of scalars. Algebras and their tensor products.

Noetherian rings, Hilbert's Basis theorem. Noetherian normalization theorem.

Hilbert's Nullstellensatz, Zariski topology.

Rings of fractions, localization.

Primary decomposition. Associated prime ideals, primary components, uniqueness theorems.

Optional themes:

Valuation rings.

Filtration. Artin-Rees lemma.

Completion and Hensel's lemma.

Introduction to the dimension theory.

Polynomials, Gröbner bases.

Temeljni literatura in viri / Readings:

- M. Reid: *Undergraduate Commutative Algebra*, Cambridge Univ. Press, Cambridge, 1995.
- M. F. Atiyah, I. G. MacDonald: *Introduction to Commutative Algebra*, Addison-Wesley, Reading, 1994.
- D. Cox, J. Little, D. O'Shea: *Ideals, Varieties and Algorithms : An Introduction to Computational Algebraic Geometry and Commutative Algebra*, 2nd edition, Springer, New York, 2005.
- N. Lauritzen: *Concrete Abstract Algebra: From Numbers to Gröbner Bases*, Cambridge University Press, Cambridge, 2003.

Cilji in kompetence:

Slušatelj spozna osnove teorije komutativne algebre. Dopolni vsebine, ki jih sreča pri algebrskih predmetih na dodiplomskem študiju. Pridobljeno znanje praktično utrdi z domačimi nalogami in samostojnim reševanjem problemov.

Objectives and competences:

The student learns the basics of the theory of commutative algebra and upgrades notions and theories that were met during the undergraduate algebraic courses. The knowledge is consolidated by homeworks and individual problem solving exercises.

Predvideni študijski rezultati:**Intended learning outcomes:**

Znanje in razumevanje: Poznavanje osnovnih pojmov in izrekov komutativne algebre in njihovo prepoznavanje v drugih vejah matematike.

Uporaba: V algebraični geometriji in algebraični teoriji števil.

Refleksija: Razumevanje teorije na podlagi primerov in uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Formulacija problemov v primernem jeziku, reševanje in analiza doseženega na primerih, prepoznavanje algebraičnih struktur v geometriji in teoriji števil.

Knowledge and understanding: Learning the basic notions and theorem of commutative algebra and recognizing the concepts in other areas of mathematics.

Application: In algebraic geometry and algebraic number theory.

Reflection: Understanding the theory on the basis of examples and applications.

Transferable skills: Formulations of problems in appropriate language, solving and analysing the results on examples, recognizing algebraic structures in geometry and number theory.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homeworks, consultations

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:

Cilji in kompetence:

Pridobiti znanje iz osnov matematične logike in osnov matematike.

Objectives and competences:

Basic knowledge of foundations of mathematics and mathematical logic.

Predvideni študijski rezultati:

Znanje in razumevanje:

Razumevanje logičnih osnov matematike in fundamentalnih omejitev aksiomatične metode.

Uporaba:

Kot temeljni kamen matematike je logika osnovno sredstvo matematičnega izražanja.

Refleksija:

Dejstvo, da obstajajo nerešljivi matematični problemi, zahteva temeljit razmislek o naravi matematike same.

Intended learning outcomes:

Knowledge and understanding:

Understanding of logical foundations of mathematics and the fundamental limitations of the axiomatic method.

Application:

Logic, being the foundation of mathematics, provides the means for communication and methodology in mathematics.

Reflection:

The fact that there are mathematical problems without solutions invites a thorough

Prenosljive spretnosti – niso vezane le na en predmet:
Sposobnost formalnega izražanja matematične vsebine. Sposobnost meta-matematične obravnave.

reconsideration of the nature of mathematics.

45		30			105	6

Nosilec predmeta / Lecturer: prof. dr. Matjaž Omladič, prof. dr. Tomaž Košir

Jeziki / Languages:

Predavanja / Lectures:	slovenski/Slovene, angleški/English
Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Pomembnejši tipi neasociativnih algeber (alternativne algebre, jordanske algebre).

Definicija Liejeve algebre. Ideali in homomorfizmi. Rešljive in nilpotentne Liejeve algebre.

Liejev in Cartanov izrek. Killingova forma. Povsem razcepne upodobitve. Upodobitve algebre $sl(2, F)$. Razcep na korenske podprostore.

Korenski sistemi. Enostavni koreni in Weylova grupa. Klasifikacija (končnorazsežnih)

Content (Syllabus outline):

Important types of nonnassociative algebras (alternating algebras, Jordan algebras). The definition of Lie algebra. Ideals and homomorphisms. Solvable and nilpotent Lie algebras.

Lie's and Cartan's Theorems. The Killing form. Completely irreducible representations. Representations of $sl(2, F)$. Root subspace decomposition.

Root systems. Simple roots and the Weyl group. Classification of (finite-dimensional) simple Lie

enostavnih Liejevih algeber.
 Univerzalna ovojna algebra. Poicaré-Birkhoff-Wittov izrek.
 Upodobitve enostavnih Liejevih algeber.

algebras.
 Universal enveloping algebra. Theorem Poicaré-Birkhoff-Witt.
 Representation theory of simple Lie algebras.

Temeljni literatura in viri / Readings:

Jeziki / Languages:		Predavanja / Lectures: slovenski/Slovene, angleški/English				
		Vaje / Tutorial: slovenski/Slovene, angleški/English				
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:			Prerequisites:			
Vpis v letnik študija			Enrollment into the program			
Vsebina:			Content (Syllabus outline):			

Prerejanja in faktorji (min-max izreki, neodvisne množice in pokritja, Tutterov izrek o 1-faktorju)

Povezanost (struktura 2-povezanih in k-povezanih grafov, dokaz in uporabe Mengerjevih izrekov)

Barvanja grafov (meje, dokaz Brooksovega izreka, struktura k-kromatičnih grafov, Turanov izrek, kromatični polinom, tetivni grafi)

Ravninski grafi (dualni graf, izrek Kuratowskega, konveksne vložitve, barvanja ravninskih grafov, prekrizno število)

Predavatelj izbere še eno izmed naslednjih tem: barvanja povezav in graf povezav, hamiltonski grafi, popolni grafi, ekstremalni problemi, dominacija v grafih, simetrijske lastnosti grafov II.

Matchings and factors (min-max theorem, independent sets and coverings, Tutter's 1-factor theorem)

Graph connectivity (structure of 2-connected and k-connected graphs, Menger theorem and its applications)

Graph Colorings (bounds of the chromatic number, structure of k-chromatic graphs, Turan's theorem, chromatical polynom, chordal graphs)

Planar graphs (dual graph, Kuratowski's theorem, convex embedding, colorings of planar graphs, crossing number)

Instructor chooses an addition topic from the following list: edge colorings and line graphs, Hamiltonian graphs, perfect graphs, extremal graph problems, graph domination, symmetric graph properties II.

Temeljni literatura in viri / Readings:

- R. Diestel: *Graph Theory*, 3. izdaja, Springer, Berlin, 2005.
- A. Bondy, U.S.R. Murty: *Graph Theory*, 2. izdaja, Springer, Berlin, 2008.
- D. West: *Introduction to Graph Theory*, 2. izdaja, Prentice Hall, Upper Saddle River, 2005.
- R. J. Wilson, M. Watkins: *Uvod v teorijo grafov*, DMFA Slovenije, Ljubljana, 1997.

Cilji in kompetence:

Študent poglobi in razširi znanje teorije grafov. Spozna uporabnost grafov in omrežij na različnih področjih matematike ter možnosti za njihovo uporabo tudi v drugih vejah znanosti.

Objectives and competences:

Students will deepen and broaden their knowledge of graph theory. Learn about the usefulness of graphs and networks in different areas of mathematics and their potential use in other branches of science.

Predvideni študijski rezultati:

Znanje in razumevanje: Slušatelj poglobi znanje iz teorije grafov.

Uporaba: Grafi omogočajo matematično modeliranje različnih pojavov. Slušatelj se seznanj z vrsto matematičnih rezultatov, ki opisujejo lastnosti grafov in tako omogočajo matematično analizo modelov, opisanih z grafi.

Refleksija: Povezovanje teoretičnih spoznanj s praktičnimi uporabami na primer v optimizaciji in pri programiranju. Sposobnost prepoznavanja problemov, ki jih lahko uspešno opišemo z grafi.

Prenosljive spretnosti – niso vezane le na en predmet: Sposobnost opisa problemov iz vsakdanjega življenja s pomočjo matematičnih struktur, še posebej z grafi. Sposobnost uporabe matematičnih orodij za reševanje problemov.

Intended learning outcomes:

Knowledge and understanding: The student deepen their knowledge of graph theory.

Application: Graphs allow mathematical modeling of variety of phenomena. The student learns various mathematical results that describe the properties of graphs and thus provide a mathematical analysis of the models described by graphs.

Reflection: Integration of theoretical knowledge with practical applications such as optimization and programming. Ability to recognize problems that can be successfully described by graphs.

Transferable skills:

The ability to describe the problems of everyday life with the help of mathematical structures, in particular with graphs. The ability to use mathematical tools to solve problems.

Metode poučevanja in učenja:

Learning and teaching methods:

predavanja, vaje, domače naloge, konzultacije

lectures, exercises, homeworks, consultations

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:				Prerequisites:		
Vpis v letnik študija				Enrollment into the program		
Vsebina:				Content (Syllabus outline):		

I. Teorija polgrup

- Osnovni pojmi teorije polgrup; primeri polgrup.
- Greenove relacije.
- Regularne polgrupe; polgrupe z obrati.
- Enostavne polgrupe; povsem enostavne polgrupe.

II. Teorija grup

- Ponovitev osnovnih pojmov teorije grup.
- Kompozicijska vrsta in Jordan-Hölderjev izrek. Rešljive grupe. Hallov izrek za rešljive grupe. Nilpotentne grupe; p-grupe.
- Razcepne in nerazcepne razširitve grup; semidirektni produkt grup; Schur-Zassenhausov izrek.
- Končne enostavne grupe in problem njihove klasifikacije. Klasične grupe (splošne linearne, simplektične, unitarne in ortogonalne) ter pripadajoče enostavne grupe.
- Osnove teorije upodobitev končnih grup. Teorija karakterjev.

I. Semigroup theory

- basic notions and examples
- Green relations
- Regular semigroups; inverse semigroups.
- Simple semigroups; completely simple semigroups.

II. Group theory

- Basic notions
- Composition series, Jordan-Hölder theorem. Solvable groups, Hall's theorem. Nilpotent groups; p-groups.
- Split and non-split extensions of groups; semidirect product; Schur-Zassenhaus theorem.
- Finite simple groups and the classification problem. Classical groups (general linear, symplectic, unitary and orthogonal) and the corresponding simple groups.
- Fundamentals of representation theory of finite groups. Character theory.

Temeljni literatura in viri / Readings:

- J. M. Howie: *Fundamentals of semigroup theory*, Oxford University Press, Oxford, 1995.
- P. M. Higgins: *Techniques of semigroup theory*, Oxford University Press, Oxford, 1992.
- J. J. Rotman: *An introduction to the theory of groups*, 4. izd., Springer New York 1995.
- D. J. S. Robinson: *A course in the theory of groups*, 2. izd., Springer New York, 1996.

Cilji in kompetence:

Študent spozna osnovne pojme iz teorije polgrup in grup ter njihovo povezanost z drugimi področji matematike.

Objectives and competences:

Students get acquainted with basic notions of group theory and semigroup theory. They get familiar with connections between these two theories and other areas of mathematics.

Predvideni študijski rezultati:**Znanje in razumevanje:**

Poznavanje osnovnih pojmov in izrekov teorije polgrup in grup in njihovo prepoznavanje v drugih vejah matematike.

Uporaba:

Teorija polgrup in grup spada med temeljne matematične predmete. Uči nas prepoznavati simetrije v naravi. Uporablja se zlasti v fiziki in kemiji (na primer kristalografija). Znotraj matematike je uporabna v geometriji, asociativni algebri, funkcionalni analizi in teoriji števil.

Refleksija:

Razumevanje teorije na podlagi primerov in uporabe.

Prenosljive spretnosti – niso vezane le na en predmet:

Formulacija problemov v primernem jeziku, reševanje in analiza doseženega na primerih, prepoznavanje grup v geometriji in analizi.

Intended learning outcomes:**Knowledge and understanding:**

Basic notions of group theory and semigroup theory, applications in other areas of mathematics.

Application:

Group theory and semigroup theory are classical mathematical disciplines. They teach us how to recognize symmetries. They have immense applications in physics and chemistry (crystallography). Within mathematics, they play an important role in geometry, associative algebra, functional analysis, and number theory.

Reflection:

Understanding theory based on examples and applications.

Transferable skills:

Formulation of problems, solving problems and analysis of results using examples, applying groups in geometry and analysis.

Univerzitetna koda predmeta / University course code: še ni dodeljena/not assigned yet

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
45		30			105	6

Nosilec predmeta / Lecturer: prof. dr. Tomaž Košir, prof. dr. Boris Lavrič

Jeziki / Languages:	Predavanja / Lectures:	slovenski/Slovene, angleški/English
	Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Predavatelj izbere med naslednjimi vsebinami:
 1. Algebraična števila: diskriminanta, cela algebraična števila, celostna baza, norma in sled. Kvadratični in ciklotomični obsegi. Nerazcepni elementi. Problem enolične faktorizacije. Praelementi. Evklidski obsegi. Ramanujan-Nagellov izrek. Primarni razcep.
 2. Mreže v R^n . Kvocientni torus. Izrek Minkowskega. Razcep celih števil na vsoto

Content (Syllabus outline):

The lecturer selects from the following list of contents:
 1. Algebraic numbers: discriminant, algebraic integers, integral basis, norm and trace. Quadratic and cyclotomic fields. Irreducible elements. The problem of unique factorization. Prime elements. Euclidean fields. The Ramanujan-Nagell theorem. Prime factorization.

kvadratov. Dedekindov izrek. Konstante Minkowskega.

3. Legendrov simbol. Gaussov zakon o kvadratni recipročnosti. Dirichletov izrek o praštevilih v aritmetičnih zaporedjih. Jacobijev simbol.

4. Dirichletov izrek o obrnljivih elementih.

5. Praštevila. Eratostenovo rešeto. Testiranje razcepnosti celih števil. Pseudopraštevila. Fermateva in Mersennova števila. Carmichaelova števila. Razporeditev praštevil. Regularna praštevila. Hevristične metode. Eulerjeva pseudopraštevila. Nelinearne diofantske enačbe. Pitagorejske trojke. Pellova enačba. Kummerjeva teorija za regularna praštevila in Fermatev problem.

6. Lucasova zaporedja. Eulerjev polinom za iracionalna števila. Generiranje praštevil. Transcendentnost znanih števil.

7. Relativna sled in norma. Diskriminanta in diferenta. Primarni razcep v Galoisevih razširitvah. Izrek Kroneckerja in Webra. Teorija razredov.

8. p -adična števila. Formalne potenčne vrste.

2. Lattices in R^n . The quotient torus. Minkowski's theorem. Sums of squares. The Dedekind's theorem. Minkowski's constants.

3. The Legendre symbol. Gauss' quadratic reciprocity law. Dirichlet's theorem on primes in arithmetic progression. The Jacobi symbol.

4. Dirichlet's unit theorem. 5. Prime numbers. The sieve of Erathostenes. Testing of factorizability of integers. Pseudoprime numbers. Fermat and Mersenne numbers. Carmichael numbers. The distribution of prime numbers. Regular primes. Heuristic methods. Euler pseudoprimes. Nonlinear diophantine equations. Pythagorean triples. Pell's equation. Kummer's theory of regular primes and Fermat's problem.

6. Lucas sequences. Euler polynomial for irrational numbers. Generating prime numbers. Transcendancy of renown numbers. 7. Relative trace and norm. Discriminant and different. Factoring of prime ideals in Galois extensions. The theorem of Kronecker and Weber. The class-field theory.

8. p -adic numbers. Formal power series.

Cilji in kompetence:

Študent se seznanja z osnovami teorije števil in njihovo uporabo. Poudarek je na algebraini teoriji števil.

Objectives and competences:

The student learns the basics of the number theory and its applications. The emphasis is on the algebraic theory of numbers.

Predvideni študijski rezultati:**Znanje in razumevanje:**

Poznavanje osnovnih pojmov in izrekov teorije števil in njihovo prepoznavanje v drugih vejah matematike.

Uporaba:

V drugih vejah matematike, kriptografiji in teoriji kodiranja. Uporaba v računalništvu in informatiki, zlasti pri računalniški varnosti.

Refleksija:

Razumevanje teorije na podlagi primerov in uporabe.

Prenosljive spretnosti – niso vezane le na en predmet:

Formulacija problemov v primernem jeziku, reševanje in analiza doseženega na primerih, prepoznavanje algebraičnih struktur v teoriji števil.

Intended learning outcomes:**Knowledge and understanding:**

Knowledge of basic concepts and theorems of the number theory of and their recognition in other areas of mathematics.

Application:

In other areas of mathematics, cryptography and coding theory. Application in computer science and informatics, especially in computer safety

Reflection:

Understanding the theory on the basis of examples and applications.

Transferable skills:

Formulation of problems in appropriate language, solving and analysis of the result on examples, identifying algebraic structures in theory of numbers.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homeworks, consultations

Načini ocenjevanja:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

- izpit iz vaj (2 kolokvija ali pisni izpit)
- ustni izpit

Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

Delež (v %) /

Weight (in %) /

Assessment:

Type (examination, oral, coursework, project):

- 2 midterm exams instead of written exam, written exam
- oral exam

Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)

Nosilec predmeta / Lecturer: doc. dr. Alen Orbanić, prof. dr. Primož Potočnik, prof. dr. Riste Škrekovski

Jeziki / Languages:

Predavanja / Lectures:	slovenski/Slovene, angleški/English
Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija
Obvladovanje vsaj enega programskega jezika na osnovnem nivoju.

Prerequisites:

Enrollment into the program
Knowledge of a programming language on a basic level.

Vsebina:

Content (Syllabus outline):

Predstavimo več modelnih problemov, ki jih lahko rešimo s pomočjo modeliranja z metodami iz diskretne matematike.

Osredotočimo se na proces obravnave problema: identifikacija entitet in odnosov med njimi, identifikacija ciljev, postavitve podatkovnega modela, izdelava algoritmov, predvidevanje testiranja in testni podatki, specifikacije, implementacija, ocenjevanje in kakovostna presoja rezultatov.

Glede na izbrane modelne probleme se po potrebi spoznamo z matematičnimi orodji in metodologijo za naslavljanje problemov, npr. orodja in metode iz heuristične optimizacije, vizualizacije in predstavitve podatkov (grafi, diagrami, ...), kvalitativne analize diskretnih dinamičnih sistemov in drugo.

V seminarskem delu predmeta bodo študenti dobili individualne ali skupinske uporabne ter raziskovalne projekte, lahko tudi v sodelovanju s podjetji ali preko vključitve na domače ali mednarodne projekte.

Several model problems are presented and modeled by using methods from discrete mathematics.

We focus on the process of addressing a problem: identification of entities and relationships among them, identification of goals, data model design, algorithm implementation, design of testing procedures and test data, specification, implementation, evaluation and qualitative evaluation of the results.

Depending on the choice of the model problems, students get familiar with various mathematical tools and methodologies for addressing the problems, e.g. heuristic optimization procedures, data visualisation methods (graphs, charts, etc.), qualitative analysis of discrete dynamic systems, etc.

During the course seminar work, students will be assigned individual and team applied and research projects. If possible the students will be involved in projects with companies or in national or international applied research projects.

Temeljni literatura in viri / Readings:

- E. Zakrajšek: *Matematično modeliranje*, DMFA-založništvo, Ljubljana, 2004.
- R. Aris: *Mathematical modelling techniques*, Dover, 1994.
- M. Jünger, P. Mutzel: *Graph Drawing Software*, Springer-Verlag, Berlin, 2004.
- Z. Michalewicz: *Genetic Algorithms + Data Structures = Evolution Programs*, Springer-Verlag, Berlin, 1999.
- R. A. Holmgren: *A First Course in Discrete Dynamical Systems*, Springer-Verlag, Berlin, 1996.

Cilji in kompetence:

Študenti se naučijo identificirati problem, ki ga je mogoče obravnavati z matematičnimi tehnikami, problem formulirati v matematično obvladljivi obliki, identificirati orodja, s katerimi se problema lahko lotimo, preiskati kompetentno literaturo, razviti ali prilagoditi ustrezen model za reševanje, poiskati kritične

Objectives and competences:

Students become capable of identifying problems that can be addressed by various mathematical techniques. They learn how to formulate problems in mathematical form, identify relevant tools to deal with the problem, search through the relevant literature, develop or adapt a relevant model for solving the

dejavnike modela, rešitev problema implementirati v praksi. Pri izdelavi projekta je poudarek tudi na posebnostih skupinskega dela.

problem, find critical aspects of it and implement a solution in practice. Specifics of team work are emphasised during the work on projects.

Predvideni študijski rezultati:

Znanje in razumevanje: spoznavanje procesa obravnave problema od njegove identifikacije, prek formulacije in obravnave modela do implementacije rešitve.

Uporaba: izdelava modelov pri reševanju realnih problemov.

Refleksija: presojanje veljavnosti predpostavk teoretičnih modelov, kritično vrednotenje izdelanih rešitev, vrednotenje skupinskega dela.

Prenosljive spretnosti – niso vezane le na en predmet: sposobnost prepoznavanja relevantnih dejstev, formuliranja problema, prilagajanja znanih rešitev, predstavitve konceptov.

Intended learning outcomes:

Knowledge and understanding: Learning of the process of a problem identification and problem addressing, starting by forming of a model, dealing with it and progressing towards a solution implementation.

Application: Construction of models for solving of real problems.

Reflection: evaluation of validity of assumptions for theoretical models, critical evaluation of constructed solutions, evaluation of team work.

Transferable skills: Capabilities of recognizing of relevant facts, problem formulation, adaptation of known solutions, concept presentation.

Metode poučevanja in učenja:

predavanja, vaje, skupinsko načrtovanje rešitev, projektno delo, seminarski nastopi, konzultacije

Learning and teaching methods:

Lectures, exercises, team solution planning, projects, seminar presentations, consultations

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Homotopija, homotopska ekvivalenca, razširitve in dvigi homotopij, homotopska kategorija.

CW kompleksi, konstrukcija, topološke lastnosti, celularne preslikave.

Fundamentalna grupa, Seifert-van Kampenov izrek, uporaba (osnovni izrek algebre, Brouwerjev in Borsuk-Ulamov izrek, grupa vozla).

Krovni prostori, povezava s fundamentalno grupo, klasifikacija.

Homološke grupe, definicija in osnovne lastnosti, računanje, uporaba (stopnja preslikave, ovojna in spletna števila, indeks vektorskega polja, negibne točke). Očrt konstrukcije homoloških grup, osnove homološke algebre.

Homotopy, homotopy equivalence, extensions and liftings of homotopies, homotopy category.

CW complexes, construction, topological properties, cellular maps.

Fundamental group, Seifert-van Kampen theorem, applications (fundamental theorem of algebra, Brouwer and Borsuk-Ulam theorem, knot groups).

Covering spaces, relation to the fundamental group, classification.

Homology groups, definition and properties, computation, applications (degree of a map, winding and linking numbers, index of a vector field, fixed points). Outline of the construction of homology groups, basic facts of homological algebra.

Temeljni literatura in viri / Readings:

- A. Hatcher: *Algebraic Topology*, Cambridge Univ. Press, Cambridge, 2002.

Cilji in kompetence:

Študent spozna osnovne pojme algebraične topologije kot so homotopija, celični prostori, fundamentalna grupa in homološke grupe.

Objectives and competences:

Student learns basic concepts of algebraic topology: homotopy, cellular spaces, fundamental group, homology groups.

Predvideni študijski rezultati:

Znanje in razumevanje:

Poznavanje osnovnih pojmov in tehnik za delo s fundamentalno grupo in homološkimi grupami. Razumevanje homotopske invariance in prijemov za obravnavanje geometrijskih

Intended learning outcomes:

Knowledge and understanding:

Basic concepts and techniques for the computation of the fundamental group and homology groups. Understanding of the concepts of homotopy invariance and of

vprašanj s pomočjo algebre.

Uporaba:

V področjih matematike, ki delajo z geometričnimi objekti (kompleksna in globalna analiza, dinamični sistemi, geometrijska in diferencialna topologija, teorija grafov), v računalništvu (grafika, prepoznavanje vzorcev, **topološka analiza podatkov, robotika**), v teoretični fiziki.

Refleksija:

Razumevanje teorije na podlagi primerov in uporabe.

Prenosljive spretnosti – niso vezane le na en predmet:

Formulacija problemov v primernem jeziku, reševanje in analiza doseženega na primerih, prepoznavanje algebraičnih struktur v geometriji.

approaches to geometric problems by algebraic methods.

Application:

Parts of mathematics with strong geometric content (complex and global analysis, geometric and differential topology, graph theory), computer science (computer graphics, pattern recognition, topological data analysis, robotics), theoretical physics.

Reflection:

Understanding of theoretical concepts through examples and applications.

Transferable skills:

Recognition of algebraic structures in geometry, appropriate formulation of problems.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Predavanja / Lectures:	slovenski/Slovene, angleški/English
Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Homotopija, homotopska ekvivalenca, razširitve in dvigi homotopij, homotopska kategorija.

CW kompleksi, konstrukcija, topološke lastnosti, celularne preslikave.

Homotopske grupe, eksaktna zaporedja para in vlaknenja, homotopski izrez.

Kohomološke grupe, definicija in osnovne lastnosti, računanje, uporaba. Konstrukcija kohomoloških grup. Kohomološki kolobar.

Homotopy, homotopy equivalence, extensions and liftings of homotopies, homotopy category.

CW complexes, construction, topological properties, cellular maps.

Homotopy groups, exact sequences of a pair and of a fibration, homotopy excision.

Cohomology groups, definition and properties, computation, applications. Construction of cohomology groups. Cohomology ring.

Temeljni literatura in viri / Readings:

- A. Hatcher: *Algebraic Topology*, Cambridge Univ. Press, Cambridge, 2002.

Cilji in kompetence:

Študent spozna osnovne pojme algebraične topologije kot so homotopija, celični prostori, homotopske grupe in kohomološke grupe.

Objectives and competences:

Student learns basic concepts of algebraic topology: homotopy, cellular spaces, homotopy groups and cohomology groups.

Predvideni študijski rezultati:

Znanje in razumevanje:

Poznavanje osnovnih pojmov in tehnik za delo s homotopskimi in kohomološkimi grupami. Razumevanje homotopske invariance in prijemov za obravnavanje geometrijskih vprašanj s pomočjo algebre.

Uporaba:

V področjih matematike, ki delajo z geometričnimi objekti (kompleksna in globalna analiza, dinamični sistemi, geometrijska in diferencialna topologija, teorija grafov), v računalništvu (grafika, prepoznavanje vzorcev,

Intended learning outcomes:

Knowledge and understanding:

Basic concepts and techniques for the computation of homotopy and cohomology groups. Understanding of the concepts of homotopy invariance and of approaches to geometric problems by algebraic methods.

Application:

Parts of mathematics with strong geometric content (complex and global analysis, geometric and differential topology, graph theory), computer science (computer graphics, pattern recognition, topological data analysis, robotics),

topološka analiza podatkov, robotika), v teoretični fiziki.

Refleksija:

Razumevanje teorije na podlagi primerov in uporabe.

Prenosljive spretnosti – niso vezane le na en predmet:

Formulacija problemov v primernem jeziku, reševanje in analiza doseženega na primerih, prepoznavanje algebraičnih struktur v geometriji.

theoretical physics.

Reflection:

Understanding of theoretical concepts through examples and applications.

Transferable skills:

Recognition of algebraic structures in geometry, appropriate formulation of problems.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homeworks, consultations

Delež (v %) /

Weight (in %)

Vaje / Tutorial: slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Definicija gladke mnogoterosti in preslikave. Osnovne konstrukcije in primeri. **Diferencial preslikave**. Tangentni sveženj in tangenta preslikava. Mnogoterosti z robom. Delovanje grupe na mnogoterosti. Krovne in kvocientne mnogoterosti. **Svežnji in vektorski svežnji**. Imerzije in submerzije. **Podmnogoterosti**. Vložitve mnogoterosti v evklidske prostore.

Vektorska polja kot dinamični sistemi. Tok vektorskega polja. Komutator vektorskih polj. Frobeniusov izrek. **Izrek o obstoju cevaste okolice**. Indeks kritične točke vektorskega polja. Poincaré-Hopfov izrek.

Liejeve grupe. Eksponentna preslikava. **Invariantna vektorska polja**. **Liejeva algebra**. **Adjungirana reprezentacija**.

Sardov izrek. Thomov izrek o transversalnosti. Presečno število podmnogoterosti. Morsejeve funkcije.

Možne dodatne vsebine:

Diferencialne forme in integracija. Stokesov izrek. De Rhamova kohomologija. Poincaréjeva dualnost. Eulerjev razred in Thomov razred.

Riemannove mnogoterosti. Volumska forma in integracija. Hodgev *-operator. Laplaceov operator. Harmonične forme. Hodgejeva dekompozicija.

The notion of a smooth manifold and map. Basic constructions and examples. The differential. The tangent bundle and the tangent map. Manifolds with boundary. Group actions on manifolds. Covering and quotient manifolds. Fiber bundles and vector bundles. Immersions and submersions. Submanifolds. Embedding manifolds to Euclidean spaces.

Vector fields as dynamical systems Flows. Commutator of vector fields. The theorem of Frobenius. The tubular neighborhood theorem. Index of a critical point of a vector field. The Poincaré-Hopf theorem.

Lie groups. The exponential map. Invariant vector fields. The Lie algebra of a Lie group. The adjoint representation.

Sard's theorem. The Thom transversality theorem. The intersection number of submanifolds. Morse functions.

Other possible topics:

Differential forms and integration. Stokes' theorem. De Rham cohomology. Poincaréjeva dualnost. Eulerjev and Thomov class.

Riemannian manifolds. Volume form and integration. The Hodge *-operator. Laplace operator. Harmonic forms. Hodge decomposition.

Temeljni literatura in viri / Readings:

- W. M. Boothby: *An Introduction to Differentiable Manifolds and Riemannian Geometry*, 2nd edition, Academic Press, Orlando, 1986.
- V. Guillemin, A. Pollack: *Differential Topology*, Prentice Hall, Englewood Cliffs, 1974.

- M. Spivak: *Calculus on Manifolds*, W. A. Benjamin, New York-Amsterdam, 1965.
- F. W. Warner: *Foundations of Differentiable Manifolds and Lie Groups*, Springer, New York-Berlin, 1983.

Cilji in kompetence:

Slušatelj se seznani z osnovami teorije gladkih mnogoterosti in njihovo povezavo s sorodnimi področji matematike kot so analitična in algebraična geometrija, teorija Riemannovih ploskev, teorija Liejevih grup in druga. Pri tem uporabi znanje iz osnovne analize, algebre in topologije.

Objectives and competences:

Students learn some of the main basic concepts and methods of the theory of smooth manifolds and its connection to related fields of mathematics such as analytic and algebraic geometry, the theory of Lie groups, the theory of Riemann surfaces, etc. Basic methods of analysis, algebra and topology are applied in the course.

Predvideni študijski rezultati:

Znanje in razumevanje: Metode matematične analize, algebre in topologije, ki jih je študent spoznal na prvi stopnji študija, se obravnavajo in uporabijo v splošnejšem kontekstu gladkih mnogoterosti.

Uporaba: Teorija mnogoterosti je ena najbolj interdisciplinarnih področij sodobne matematike in je osnova vrsti področij kot so analitična, algebraična in diferencialna geometrija, teorija Liejevih grup, teorija Riemannovih ploskev, dinamika, itd. Mnogoterosti so nepogrešljivo orodje v naravoslovju in tehniki.

Refleksija: Razumevanje teorije na podlagi primerov. Razvoj sposobnosti uporabe teorije v različnih problemih znanosti in tehnike.

Prenosljive spretnosti – niso vezane le na en predmet: Identifikacija, formulacija in reševanje problemov s pomočjo metod teorije gladkih mnogoterosti. Spretnost uporabe domače in tuje literature.

Intended learning outcomes:

Knowledge and understanding: Methods of mathematical analysis, algebra and topology are applied and further developed in the context of smooth manifolds.

Application: The theory of smooth manifolds is one of the most interdisciplinary areas of modern mathematics. It is a basis of a number of areas such as analytic, algebraic and differential geometry, the theory of Lie groups, the theory of Riemann surfaces, dynamics, etc. Manifolds are a major tool in natural and technical sciences.

Reflection: Understanding the theory on the basis of examples. Acquiring skills in applying the theory to diverse scientific problems.

Transferable skills: The ability to identify, formulate and solve scientific problems using methods of smooth manifolds. Developing skills of using the domestic and foreign literature.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Obvezni del:

Uvod in osnovni pojmi: Vektorska polja in Liejev oklepaj. Temeljni pojmi teorije Liejevih grup in Liejevih algeber. Diferencialne forme. Vektorski svežnji in Riemannove strukture na njih.

Glavni svežnji, pridruženi svežnji, sveženj ogrodij, pojem redukcije svežnja.

Diferencialne forme z vrednostmi v Liejevih algebrah, povezave na glavnem svežnju. Horizontalni dvig poti. Ukrivljenost in holonomija. Različni opisi ukrivljenosti na glavnem svežnju.

Povezave na vektorskih svežnjih, kovariantni odvod. Chernovi razredi.

Temelji Riemannove geometrije: Riemannova metrika, Levi-Civítájeva povezava, Riemannov tenzor ukrivljenosti in njegove lastnosti, Riccijeva in Weylova ukrivljenost, avtoparalelnost, geodetske krivulje. Eksponentna preslikava.

Izbirni del:

Podgrupe grupe $GL(n, \mathbf{C})$ in simetrični prostori. Gaussova ukrivljenost na ploskvah. Poissonove in simplektične mnogoterosti. Pontrjaginski razredi in Bottov izrek. Konformnost in Weylov tenzor.

Core topics:

Introduction: Vector fields and Lie bracket.

Fundamental notions of the Lie theory.

Differential forms. Vector bundles, Riemann structures on vector bundles.

Principal bundles, associated bundles, frame bundles, reductions of bundles.

Differential forms with values in Lie algebras, connections on principal bundles. Horizontal lift of a path. Curvature and holonomy. Various descriptions of the curvature on a principal bundle.

Connections on vector bundles, covariant derivative. Chern classes.

Fundamental notions of Riemann geometry:

Riemannian metric, Levi-Civítá connection, Riemann curvature tensor and its properties, Ricci and Weyl curvatures, autoparallel curves, geodesic curves. Exponential map.

Additional topics: Subgroups of the group $GL(n; \mathbf{C})$ and symmetric spaces. Gaussian curvature on surfaces. Poisson and symplectic manifolds. Pontryagin classes and Bott's theorem. Conformality and Weyl tensor

Temeljni literatura in viri / Readings:

- J. Cheeger, D. Ebin, *Comparison Theorems in Riemannian Geometry*, AMS Chelsea Publishing, Providence, 2008

Cilji in kompetence:**Objectives and competences:**

Študent se spozna s temelji sodobne diferencialne geometrije. Osnovna pojma tega predmeta sta povezava na glavnem ali na vektorskem svežnju in ukrivljenost povezave. Ukrivljenost je predstavljena skozi optiko Frobeniusovega izreka. Vpeljan je pojem holonomije, opisana je zveza med ukrivljenostjo in holonomijo. Te pojme uporabimo pri obravnavi temeljev Riemannove geometrije. Prek Chernovih razredov poudarimo povezavo s topologijo.

Fundamental concepts of modern differential geometry are introduced. The central objects of the course are connections on principal or vector bundles and their curvatures. The curvature is described from the point of view of the Frobenius theorem. The notion of holonomy is introduced and the relationship between holonomy and curvature is described. These notions are then used in the presentation of the fundamentals of the Riemannian geometry. The relationship between differential geometry and topology is illustrated by means of Chern classes.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje in razumevanje osnovnih pojmov in definicij iz diferencialne geometrije.

Uporaba: Uporaba teorije pri reševanju problemov.

Refleksija: Razumevanje teorije na podlagi uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnosti uporabe domače in tuje literature in drugih virov, identifikacija in reševanje problemov, kritična analiza.

Intended learning outcomes:

Knowledge and understanding: Understanding the fundamental definitions and concepts of differential geometry.

Application: Solving problems by applying the relevant theory.

Reflection: Understanding the theory through its applications.

Transferable skills: Skills in the use of the relevant literature and other sources, formulating problems and solving them, critical analysis.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Cilji in kompetence:

Študent spozna osnovne pojme konveksne geometrije in konveksne analize. Seznan se z lastnostmi konveksnih množic in konveksnih funkcij v evklidskih in normiranih prostorih ter z uporabo teorije na raznih področjih matematike. Pri tem povezuje geometrijsko intuicijo z algebro, analizo in kombinatoriko.

Objectives and competences:

The student learns the basic concepts of convex geometry and convex analysis. The student gets familiar with the properties of convex sets and convex functions in euclidean and normed spaces and applications of the theory in different areas of mathematics. The student combines geometric intuition with algebra, analysis and combinatorics.

Predvideni študijski rezultati:

Znanje in razumevanje:

Poznavanje in razumevanje osnovnih pojmov teorije konveksnih množic in konveksnih funkcij. Sinteza metod iz linearne algebre, analize in geometrije.

Uporaba:

Uporaba teorije pri reševanju problemov na raznih področjih matematike in drugih znanosti.

Refleksija:

Intended learning outcomes:

Knowledge and understanding:

Knowledge and understanding of basic concepts of the theory of convex sets and convex functions. A synthesis of methods of linear algebra, analysis and geometry.

Application:

Solving problems in different areas of mathematics and other sciences using the theory.

Reflection:

Razumevanje teorije na podlagi primerov in uporabe.

Prenosljive spretnosti – niso vezane le na en predmet:
 Postavitev problema, njegova matematična formulacija ter reševanje in analiza. Prenos teorije v prakso.

Understanding the theory on the basis of examples and applications.

Transferable skills:
 Posing of a problem, its mathematical formulation, solving and analysis. The transfer of the theory into praxis.

Metode poučevanja in učenja:
 predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:
 Lectures, exercises, homeworks, consultations

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Način (pisni izpit, ustno izpraševanje, naloge, projekt): <ul style="list-style-type: none"> ▪ izpit iz vaj (2 kolokvija ali pisni izpit) ▪ ustni izpit Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)	50% 50%	Type (examination, oral, coursework, project): <ul style="list-style-type: none"> ▪ 2 midterm exams instead of written exam, written exam ▪ oral exam Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Liejeva grupa in njena Liejeva algebra. Eksponentna preslikava. Adjungirano delovanje.

Liejeva teorija.

Homogeni prostori. Izrek o rezini.

Kompaktne Liejeve grupe. Haarova mera.

Maksimalni torusi.

Možne dodatne vsebine:

Weylova grupa. Korenski prostori. Upodobitev kompaktnih Liejevih grup. Rešljive, nilpotentne in polenostavne Liejeve grupe in Liejeve algebre. Harmonična analiza na Liejevi grupi.

Lie group and the associated Lie algebra.

Exponential map. Adjoint action.

Lie theory.

Homogeneous spaces. Slice theorem.

Compact Lie groups. Haar measure. Maximal tori.

Other possible topics::

Weyl group. Root spaces. Representations of compact Lie groups. Solvable, nilpotent and semisimple Lie groups and Lie algebras.

Harmonic analysis on a Lie group.

Temeljni literatura in viri / Readings:

- J. F. Adams: *Lectures on Lie Groups*, W. A. Benjamin, New York-Amsterdam, 1969.

- J. J. Duistermaat, J. A. C. Kolk: *Lie Groups*, Springer, Berlin, 2000.

Cilji in kompetence:

Študent se spozna s pojmom Liejeve grupe in njene Liejeve algebre, ter z Liejevo teorijo. Posebej se seznanja s teorijo upodobitev kompaktnih Liejevih grup in homogenih prostorov. Liejeve grupe so centralni pojem diferencialne geometrije, njihova uporaba pa sega v številna področja matematike in matematične fizike.

Objectives and competences:

Student gets familiar with the basic concepts of Lie group with the associated Lie algebra, and with Lie theory. In particular, the student learns the basic theory of representations of compact Lie groups and homogeneous spaces. Lie groups are a central concept of differential geometry and are applied in many areas of mathematics and mathematical physics.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje in razumevanje osnovnih pojmov in definicij iz teorije Liejevih grup.

Uporaba: Uporaba teorije pri reševanju problemov.

Refleksija: Razumevanje teorije na podlagi uporabe.

Intended learning outcomes:

Knowledge and understanding: Knowledge and understanding of basic concepts and definitions of the theory of Lie groups.

Application: Solving problems using the theory.

Reflection: Understanding of the theory from the applications.

Transferable skills: Skills in using the literature and other sources, the ability to identify and

Prenosljive spretnosti – niso vezane le na en predmet: Spretnosti uporabe domače in tuje literature in drugih virov, identifikacija in reševanje problemov, kritična analiza.

Vsebina:

Content (Syllabus outline):

Definicija Riemannove ploskve. Osnovni primeri. Holomorfne in meromorfne funkcije in preslikave. Topologija Riemannovih ploskev.

Krovni prostori in krovne transformacije.

Analitično nadaljevanje. Algebraične funkcije. Integracija na Riemannovih ploskvah.

Riemannove ploskve kot kompleksne krivulje.

Osnovni pojmi teorije snopov.

Konstrukcija meromorfni funkcij z L_2 -metodo.

Weylova lema. Hilbertov prostor kvadratno integrabilnih form. Meromorfne funkcije in diferenciali. Harmonični in analitični diferenciali. Bilinearne relacije. Divizorji in holomorfni vektorski svežnji. Riemannov-Rochov izrek in uporaba.

Možne dodatne vsebine:

Odrte Riemannove ploskve. Dirichletov problem. Rungejev aproksimacijski izrek. Mittag-Lefflerjev in Weierstrassov izrek.

Riemann-Koebejev uniformizacijski izrek.

Riemann-Hilbertov robni problem. **Serrejev izrek o dualnosti.** **Abelov izrek in uporabe.**

Jacobijev inverzni problem. Kompleksni torusi. Eliptične funkcije. Weierstrassova funkcija.

The notion of a Riemann surface. Basic examples. Holomorphic and meromorphic functions and maps. Topology of Riemann surfaces. Covering spaces and deck transformations. Analytic continuation. Algebraic functions. Integration on Riemann surfaces. Riemann surfaces as complex curves. Basics of sheaf theory.

Construction of meromorphic functions by L_2 -method. Weyl lemma. Hilbert space of square integrable forms. Meromorphic functions and differentials. Harmonic and analytic differentials. Bilinear relations. Divisors and holomorphic line bundles. The Riemann-Roch theorem and applications.

Other possible topics: Open Riemann surfaces. The Dirichlet problem. The Runge approximation theorem. Theorems of Mittag-Leffler and Weierstrass. Riemann-Koebe uniformization theorem. Riemann-Hilbert boundary value problem. Serre duality. Abel's theorem and applications. Jacobi inverse problem. Complex tori. Elliptic functions. Weierstrass function.

Temeljni literatura in viri / Readings:

- H. M. Farkas, I. Kra: *Riemann Surfaces*, 2nd edition, Springer, New York, 1992.
- O. Forster: *Lectures on Riemann Surfaces*, Springer, New York, 1999.
- F. Kirwan: *Complex Algebraic Curves*, Cambridge Univ. Press, Cambridge, 1992.
- B. A. Dubrovin, A. T. Fomenko, S. P. Novikov: *Modern Geometry - Methods and Applications III : Introduction to Homology Theory*, Springer, New York, 1990.
- **D. Varolin: *Riemann surfaces by way of complex analytic geometry*. Amer. Math. Soc., Providence, RI, 2011.**

Cilji in kompetence:

Slušatelj se seznani z osnovami teorije Riemannovih ploskev in njihovo povezavo s sorodnimi področji matematike kot so kompleksna analiza in algebraična geometrija. Pri tem uporabi znanje iz osnovne analize, algebre in topologije.

Objectives and competences:

Students learn some of the basic concepts and methods of the theory of Riemann surfaces and its connection to related fields of mathematics such as complex analysis and algebraic geometry. Basic methods of analysis, algebra and topology are applied in the course.

Predvideni študijski rezultati:**Znanje in razumevanje:**

Spoznanje in razumevanje nekaterih bistvenih osnovnih pojmov teorije Riemannovih ploskev.

Uporaba: Riemannove ploskve so pojavljajo v vrsti matematični področij (analitična in algebraična geometrija, diferencialna geometrija, simplektična geometrija), nepogrešljive pa so tudi v mnogih vejah fizike (npr. teorija strun) in širše znanosti. Eliptične krivulje so bistvenega pomena v kriptografiji.

Refleksija: Razumevanje teorije na podlagi primerov. Razvoj sposobnosti uporabe teorije v različnih znanstvenih problemih.

Prenosljive spretnosti – niso vezane le na en predmet: Identifikacija, formulacija in reševanje problemov s pomočjo metod teorije Riemannovih ploskev. Spretnost uporabe domače in tuje literature. Privajanje na samostojno seminarsko predstavitev gradiva.

Intended learning outcomes:

Knowledge and understanding: Understanding of fundamental topics in the theory of Riemann surfaces.

Application: Riemann surfaces appear naturally in many areas of mathematics (e.g. in analytic and algebraic geometry, differential geometry, symplectic geometry and other areas), as well as in several areas of physics (such as string theory) and in other sciences. Elliptic curves are a fundamental tool in cryptography.

Reflection: Understanding the theory on the basis of examples. Acquiring skills in applying the theory to diverse scientific problems.

Transferable skills: The ability to identify, formulate and solve scientific problems using methods of Riemann surface theory. Developing skills of using the domestic and foreign literature. Developing skills of independent presentation of the material.

Metode poučevanja in učenja:

predavanja, seminarji, vaje, domače naloge, konzultacije

Learning and teaching methods:

Prerequisites:

Enrollment into the program

Vsebina:

Osnovni del:
 Afine raznoterosti. Hilbertov izrek o ničlah.
 Kolobar polinomskih funkcij. Racionalne funkcije.
 Lokalne lastnosti ravninskih krivulj.
 Projektivne raznoterosti. Regularne in racionalne funkcije.
 Projektivne ravninske krivulje. Bezoutov izrek.
 Izrek Maxa Noetherja.
 Preslikave med raznoterostmi. Resolucije

Content (Syllabus outline):

Fundamental part:
 Affine varieties. Hilbert Nullstellensatz.
 Ring of polynomial functions. Rational functions.
 Local properties of plane curves.
 Projective varieties. Regular and rational functions.
 Projective plane curves. Bezout's Theorem.
 Max Noether Theorem.
 Affine and rational maps. Resolutions of singularities.
 Hilbert polynomial and Hilbert function.
 Divisors on varieties.

singularnosti krivulj.
Hilbertov polinom in Hilbertova funkcija.
Delitelji na raznoterostih.
Krivulje. Ravninske kubične krivulje. Linearni sistemi na krivulji. Projektivne vložitve krivulj.
Izbirne vsebine:
Riemann-Rochov izrek.

Curves. Plane cubic curves. Linear systems on curves. Projective embeddings of curves.

Elective topics:
Riemann-Roch Theorem.

Temeljni literatura in viri / Readings:

Cilji in kompetence:

Študent se spozna z osnovnimi pojmi in izreki algebraične geometrije.

Objectives and competences:

Student masters basic concepts and tools of algebraic geometry.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje pojmov in izrekov algebraične geometrije in njihovo prepoznavanje v drugih vejah matematike.

Uporaba: V področjih matematike, ki delajo z geometričnimi objekti, v teoretični fiziki, in drugje.

Refleksija: Razumevanje teorije na podlagi primerov in uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Formulacija problemov v primernem jeziku, reševanje in analiza dobljenih rezultatov na primerih, prepoznavanje algebraičnih struktur v geometriji.

Intended learning outcomes:

Knowledge and understanding: Understanding of basic concepts and theorems of algebraic geometry, and their role in some other areas.

Application: In the areas of mathematics that deal with geometric objects, in theoretical physics, and elsewhere.

Reflection: Understanding the theory on the basis of examples and applications.

Transferable skills: Formulation and solution of problems in an appropriate setup, solution and analysis of the results in examples, recognizing algebraic structure in geometric objects.

Predavanja / Lectures:
Vaje / Tutorial:

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:

Content (Syllabus outline):

Kadar imamo opravka z velikimi razpršenimi matrikami, se moramo numeričnega reševanja linearnega sistema in problema lastnih vrednosti lotiti drugače kot z direktnimi metodami (na primer Gaussova eliminacija oziroma QR metoda), saj nam sicer zmanjka spomina ali pa računanje poteka prepočasi.

Iterativne metode za linearni sistem.

Jacobijeva, Gauss-Seidlova in SOR metoda.

Simetrična SOR metoda s pospešitvijo Čebiševa. Podprostor Krilova. Lanczosev in Arnoldijev algoritem, GMRES, MINRES in sorodne metode. Metoda konjugiranih gradientov. **Bi-konjugirani gradienti.**

Predpogojevanje.

Nelinearni sistemi. Newton-GMRES, Broydova metoda. **GMRES za najmanjše kvadrate.**

Iterativne metode za problem lastnih vrednosti. Rayleigh-Ritzeva metoda, Metode podprostorov Krilova, Jacobi-Davidsonova metoda. Posplošeni problem lastnih vrednosti, polinomski problem lastnih vrednosti.

In case of large sparse matrices we can not apply direct methods (e.g., Gaussian elimination or QR algorithm) to solve a linear system or compute the eigenvalues, as we run out of time or memory.

Iterative methods for linear systems. Jacobi, Gauss-Seidel and SOR method. Symmetric SOR with Chebyshev acceleration. Krylov subspace. Lanczos and Arnoldi algorithm, GMRES, MINRES and similar methods. Conjugate gradients. Bi-conjugate gradients. Preconditioning.

Nonlinear systems. Newton-GMRES, Broyden's method, GMRES for least squares.

Iterative methods for eigenvalue problems. Rayleigh-Ritz method, methods based on Krylov subspaces, Jacobi-Davidson method. Generalized eigenvalue problem, polynomial eigenvalue problem.

Cilji in kompetence:

Objectives and competences:

Slušatelj spozna iterativne numerične metode za reševanje linearnih sistemov in problemov lastnih vrednosti, ki se jih uporablja pri razpršenih matrikah. Dopolni vsebine, ki jih sreča pri Uvodu v numerične metode in Numerični linearni algebr. Pridobljeno znanje praktično utrdi z domačimi nalogami in reševanjem problemov s pomočjo računalnika.

Students learn iterative numerical methods for linear systems and eigenvalue problems where matrices are sparse. New knowledge complements the content of courses Numerical linear algebra and Introduction to numerical methods. The acquired knowledge is consolidated by homework assignments and solving problems using computer programs.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje osnovnih numeričnih algoritmov za razpršene matrike. Obvladanje numeričnega reševanja problemov z velikimi matrikami. Sposobnost izbire najprimernejšega algoritma glede na lastnosti matrike. Znanje programiranja in uporabe Matlaba oziroma drugih sorodnih orodij za reševanje tovrstnih problemov.

Uporaba: Ekonomično in natančno numerično reševanje linearnih sistemov oziroma lastnih problemov z razpršenimi matrikami.

Refleksija: Razumevanje teorije na podlagi uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnost uporabe računalnika pri reševanju matematičnih problemov. Razumevanje razlik med eksaktnim in numeričnim računanjem. Predmet konstruktivno nadgrajuje zahtevnejša znanja linearne algebre.

Intended learning outcomes:

Knowledge and understanding: Understanding of basic numerical algorithms for sparse matrices. Being able to numerically solve problems with large sparse matrices. The ability to choose an appropriate algorithm based on matrix properties. Knowledge of computer programming package Matlab or other similar software for solving such problems.

Application: Economical and accurate numerical computation of linear systems or eigenvalue problems with sparse matrices.

Reflection: Understanding of the theory from the applications.

Transferable skills: The ability to solve mathematical problems using a computer. Understanding the differences between the exact and the numerical computation. The subject enriches constructively the knowledge of linear algebra.

Vaje / Tutorial:

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:

Content (Syllabus outline):

Aproksimacija funkcij: Izbira prostorov aproksimativnih funkcij. Polinomi. Trigonometrijski polinomi. Odsekoma polinomske funkcije. **Stabilnost baz.** Weierstrassov izrek. Pozitivni operatorji. Optimalni aproksimativni problem. Eksistenca in enoličnost elementa najboljše aproksimacije. Enakomerna konveksnost, stroga normiranost.

Enakomerna aproksimacija s polinomi: Enoličnost za diskretni in zvezni primer. Alternacija residuala. Konstrukcija. Prvi in drugi Remesov postopek. Konvergenca. Polinomi Čebiševa. Posplošitve: Čebiševi sistemi funkcij, generalizirani polinomi.

Metoda najmanjših kvadratov v zveznem in diskretnem primeru: Ortogonalni polinomi. Tričlenska rekurzivna formula. Gram-Schmidtova ortogonalizacija in numerično stabilnejše izvedbe. Reortogonalizacija. Navezava diskretnega in zveznega primera. Enakomerna konvergenca L_2 -aproksimacij.

Interpolacija: Interpolacija s polinomi. Lagrangeva oblika interpolacijskega polinoma in ostanek. **Baricentrična Lagrangeova interpolacija.** Deljene diference. Newtonova oblika interpolacijskega polinoma, posplošena Hornerjeva shema. Divergenca interpolacijskih polinomov.

Odsekoma polinomske funkcije, zlepki: Eulerjevi poligoni, interpolacija in aproksimacija v drugi normi. Kubični zlepki. B-zlepki kot baza prostora odsekoma polinomskih funkcij. Bézierove krivulje. **Zlepki v dveh dimenzijah.**

Approximation of functions: Spaces of approximation functions. Polynomials. Trigonometric polynomials. Piecewise polynomial functions. **Stability of bases.** Weierstrass' Theorem. Positive operators. Optimal approximation. Existence and uniqueness of the best approximation. Uniform convexity and strong normed spaces.

Uniform approximation by polynomials: Uniqueness in the discrete and continuous case. Iteration of residuals. Construction. The first and the second Remes algorithm. Convergence. Chebyshev polynomials. Generalizations: Chebyshev systems, generalized polynomials.

Continuous and discrete least squares: Orthogonal polynomials. Three-term recurrence. Gram-Schmidt orthogonalization, basic and stable version. Reorthogonalization. Connection between discrete and continuous case. Uniform convergence of L_2 -approximants.

Interpolation: Polynomial interpolation. Lagrange form. **Barycentric Lagrange interpolation.** Divided differences. Newton form and generalized Horner scheme. Divergence of interpolating polynomials.

Piecewise polynomial functions, splines: Euler polygons, interpolation and approximation in the second norm. Cubic splines. B-spline bases of piecewise polynomial functions. Bézier curves. **Splines in two dimensions.**

- D. R. Kincaid, E. W. Cheney: *Numerical Analysis : Mathematics of Scientific Computing*, 3rd edition, Brooks/Cole, Pacific Grove, 2002.

Cilji in kompetence:

Slušatelj dopolni poznavanje analitičnih metod aproksimacije in interpolacije z numeričnimi. Ob domačih nalogah pridobljeno znanje praktično utrdi.

Objectives and competences:

Student supplements knowledge of analytical methods in approximation and interpolation by numerical aspects. By solving homeworks the obtained theoretical knowledge is consolidated.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje pojmov interpolacije in aproksimacije. Praktično obvladanje numeričnih postopkov za konstrukcijo interpolacijskih oziroma aproksimacijskih funkcij.

Uporaba: Numerična konstrukcija interpolacijskih ali aproksimacijskih funkcij s pomočjo računalnika in ocenjevanje napak na podlagi teorije. Interpolacija in aproksimacija se uporabljata **na mnogih področjih, še posebej** pri računalniško podprtem grafičnem modeliranju.

Refleksija: Razumevanje teorije na podlagi uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnost uporabe računalnika pri reševanju matematičnih problemov. Razumevanje razlik med eksaktnim in numeričnim računanjem.

Intended learning outcomes:

Knowledge and understanding: Understanding of interpolation and approximation. Ability of numerical algorithms for construction of interpolating or approximating functions.

Application: Numerical construction of interpolating and approximating functions using a computer and error estimation based on theory. Interpolation and approximation are used in several fields, in particular in computer aided graphical modelling.

Reflection: Understanding of theory based through applications.

Transferable skills: Skill of using computer for solving numerical problems. Understanding differences between exact and numerical computing.

Metode poučevanja in učenja:

Predavanja, vaje, domače naloge, konzultacije.

Learning and teaching methods:

Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:

Content (Syllabus outline):

Numerično odvajanje: Stabilno računanje odvodov. Diferenčne aproksimacije **za odvode.**

Numerična integracija: Stopnja in konvergenca. Newton–Cotesove formule. Gaussove kvadraturene formule. Sestavljena pravila. Ocene napak. Konvergenca. Euler-McLaurinovo sumacijsko pravilo in Rombergova ekstrapolacija. Singularni integrali. Večkratni integrali. Metode tipa Monte Carlo.

Reševanje navadnih diferencialnih enačb: Začetni problem. Enačbe prvega reda. Enačbe višjih redov. **Sistemi diferencialnih enačb.** Lokalna in globalna napaka. Eksplicitne in implicitne metode.

Enočlenske metode: Eulerjeva metoda. Uporaba Taylorjeve vrste. Metode tipa Runge-Kutta. Eksplicitna RK metoda četrtega reda, trapezno pravilo, Mersonova metoda, **Runge-Kutta Fehlbergova metoda.** Stabilnost, konsistentnost in konvergenca enočlenskih metod. A-stabilnost.

Veččlenske metode: Metode, **ki temeljijo** na numerični integraciji. Adamsove metode. Splošne linearne veččlenske metode. Rodovna polinoma in lokalna napaka. Prediktor–korektor metode. Milnova metoda. Ničelna stabilnost. Ocena reda ničelno stabilne veččlenske metode. Metode, **ki temeljijo** na diferenčnih aproksimacijah odvoda. Implicitne BDF metode. **Ničelna stabilnost, konsistentnost in konvergenca veččlenskih metod.**

Robni problemi: Linearne enačbe. Prevedba na začetne probleme in **strelska metoda.** Diferenčna metoda.

Numerical differentiation: Stable computing of derivatives. Differential approximations for derivatives.

Numerical integration: Degree of a rule and convergence. Newton-Cotes integration rules. Gauss quadratures. Composite rules. Error estimates. Convergence. Euler-Maclaurin formula and Romberg extrapolation. Singular integrals. Multiple integrals. Monte Carlo methods.

Ordinary differential equations: Initial value problems. First order ODE equations. Higher order ODE equations. Systems of ODE equations. Local and global error. Explicit and implicit methods.

One-step methods: Euler method. Methods based on Taylor's series. Runge-Kutta methods. Explicit RK method of order four, trapezoidal rule, Merson method, Runge-Kutta Fehlberg method. Stability, consistency and convergence of one-step methods. A-stability.

Multistep methods: Methods based on numerical integration. Adams methods. Linear multistep methods. Characteristic polynomials and a local error. Predictor-Corrector methods. Milne's method. Zero stability. Order estimation of a zero stable method. Methods based on derivative approximations. Implicit BDF methods. Stability, consistency and convergence of multistep methods.

Boundary value problems: Linear equations. Initial value and shooting methods. Finite difference methods.

Temeljni literatura in viri / Readings:

Cilji in kompetence:

Slušatelj dopolni poznavanje metod za numerično odvajanje, integracijo in numerično reševanje navadnih diferencialnih enačb. Ob domačih nalogah pridobljeno znanje praktično utrdi.

Objectives and competences:

Student supplements knowledge of numerical differentiation, integration and numerical solving of ODE equations. By solving homeworks the obtained theoretical knowledge is consolidated.

Predvideni študijski rezultati:

Znanje in razumevanje:

Razumevanje delovanja metod za numerično integriranje in reševanje navadnih diferencialnih enačb. Sposobnost numeričnega reševanja navadnih diferencialnih enačb in robnih problemov s pomočjo računalnika. Sposobnost izbire najprimernejšega algoritma glede na lastnosti problema.

Uporaba: Numerično računanje integralov in numerično reševanje navadnih diferencialnih enačb s pomočjo računalnika in ocenjevanje napak na podlagi teorije. V praksi (fizika, mehanika, kemija, ekonomija, ...) se pogosto pojavljajo integrali in diferencialne enačbe, ki jih ni možno rešiti drugače kot numerično.

Refleksija: Razumevanje teorije na podlagi uporabe.

Intended learning outcomes:

Knowledge and understanding: Understanding methods for numerical integration and ordinary differential equations. Ability of numerical solving of initial and boundary value problems with the help of computers. Capability of choosing the most appropriate algorithm according to some features of the problem.

Application: Numerical computing of integrals and numerical solving of ODE equations using a computer and error estimation based on theory. Problems that can not be solved any other way that numerically occurs very often in practise (physics, mechanics, chemistry, economy, ...).

Reflection: Understanding of theory through applications.

Transferable skills: Skill of using computer for solving numerical problems. Understanding differences between exact and numerical

Prenosljive spretnosti – niso vezane le na en predmet: Spretnost uporabe računalnika pri reševanju matematičnih problemov. Razumevanje razlik med eksaktnim in numeričnim računanjem. Predmet konstruktivno nadgrajuje zahtevnejša znanja analize in drugih področij matematike.

Predavanja / Lectures:
Vaje / Tutorial:

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:

Content (Syllabus outline):

Linearni sistemi upravljanja. Zvezni in diskretni sistemi. Vzhodno-izhodne diferencialne enačbe, prostor stanj. Stabilnost, vodljivost, spoznavnost. Regulatorji, odprtozankni in zaprtozankni sistemi.

Odziv sistema. Rešitev zveznega sistema. Računanje eksponentne funkcije matrike preko razvoja v Taylorjevo vrsto, Padéjeve aproksimacije in različnih faktorizacij.

Numerično testiranje vodljivosti in spoznavnosti. Oddaljenost od najbližjega nevodljivega sistema. Oddaljenost od najbližjega nestabilnega sistema.

Numerično reševanje in stabilnost Ljapunove in Sylvestrove matrične enačbe. Uporaba Jordanove forme, Bartels–Stewartov algoritem, Hessenberg–Schurova metoda, splošene Schurove metode.

Numerično reševanje in stabilnost Riccatijeve matrične enačbe. Uporaba lastnega razcepa, Schurova metoda, Newtonova metoda, splošene Schurove metode.

Uravnoteženje sistema. Redukcija modela. Stabilizacija s povratno informacijo in razporejanje lastnih vrednosti. Stabilizabilen sistem. Razporejanje polov.

Linear control systems. Continuous-time and discrete-time systems. Input-output differential equations, state space. Stability, controllability, observability. Regulators, open-loop and closed-loop systems.

System response. Solution of a continuous-time system. Numerical computation of matrix exponential using Taylor series, Padé approximation, and matrix factorizations.

Numerical tests for controllability and observability. Distance to the nearest uncontrollable system. Distance to the nearest unstable system.

Numerical methods for and stability of Lyapunov and Sylvester matrix equations. Application of Jordan canonical form, Bartels-Stewart algorithm, Hessenberg-Schur method, generalized Schur methods.

Numerical methods for and stability of Riccati matrix equations. Application of eigendecomposition, Schur method, Newton method, generalized Schur methods.

Internal balancing. Model reduction. State-feedback stabilization and eigenvalue assignment problem. Stabilizable system. Pole assignment.

Temeljni literatura in viri / Readings:

- P. Hr. Petkov, N. D. Christov, M. M. Konstantinov: *Computational Methods for Linear Control Systems*, Prentice Hall, New York, 1991.

Cilji in kompetence:

Slušatelj spozna osnove linearnih sistemov upravljanja, poudarek pa je na numeričnih metodah, ki jih potrebujemo za reševanje raznih matričnih problemov, ki se tu pojavijo. Pridobljeno znanje praktično utrdi z domačimi nalogami in reševanjem problemov s pomočjo računalnika.

Objectives and competences:

Student learns basics of linear control systems with emphasis on numerical methods for various related matrix problems. The acquired knowledge is consolidated by homework assignments and solving problems using computer programs.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje osnov linearnih sistemov upravljanja. Poznavanje osnovnih numeričnih pristopov za reševanje problemov s tega področja. Znanje programiranja in uporabe Matlaba oziroma drugih sorodnih orodij za reševanje tovrstnih problemov.

Uporaba: Numerično reševanje problemov iz linearnih sistemov upravljanja.

Refleksija: Razumevanje teorije na podlagi uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnost uporabe računalnika pri reševanju matematičnih problemov.

Intended learning outcomes:

Knowledge and understanding: Understanding of basics of control linear systems. The knowledge of basic numerical methods for related problems. Knowledge of computer programming package Matlab or other similar software for solving such problems.

Application: Numerical computation of problems from linear control theory.

Reflection: Understanding of the theory from the applications.

Transferable skills: The ability to solve mathematical problems using a computer.

Nosilec predmeta / Lecturer: prof. dr. Gašper Jaklič, doc. dr. Marjetka Krajnc, prof. dr. Emil Žagar

Jeziki / Languages:
Predavanja / Lectures: slovenski/Slovene, angleški/English
Vaje / Tutorial: slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Parcialne diferencialne enačbe: Uvod v PDE in modelni problemi drugega reda.

Enačbe eliptičnega tipa: Poissonova enačba. Diferenčna metoda. Diskretni maksimalni princip in ocena globalne napake. Iterativno reševanje diskretiziranih enačb. Jacobijeva, Gauss-Seidelova in SOR metoda. Simetrična SOR metoda s pospešitvijo Čebiševa. ADI metoda. Metode podprostorov Krilova. Večmrežne metode. Variacijske metode. Metoda končnih elementov.

Enačbe parabolničnega tipa: Prevajanje toplote. Eksplicitne in implicitne numerične sheme. Crank-Nicolsonova metoda. Konsistenca, stabilnost in konvergenca.

Enačbe hiperboličnega tipa: Valovna enačba. Karakteristike, karakteristične spremenljivke. Diferenčna metoda. Courantov pogoj. Konvergenca diferenčnih aproksimacij za modelni primer. Metoda karakteristik.

Partial differential equations: Introduction to PDE and examples of partial differential equations of the second order.

Elliptic equations: Poisson's equation. Finite difference method. Discrete maximum principle and global error estimation. Iterative methods for discretized equations. Jacobi, Gauss-Seidel and SOR iterative methods. Symmetric SOR and Chebyshev acceleration. ADI method. Krilov subspace methods. Multigrid methods. Variational methods. Finite element methods.

Parabolic equations: Heat transfer equation. Explicit and implicit numerical schemes. Crank-Nicolson's method. Consistency, stability and convergence.

Hyperbolic equations: Wave equation. Characteristics. Characteristical variables. Finite difference method. Courant's condition. Convergence of finite difference approximations for a model equation. Method of characteristics.

Cilji in kompetence:

Slušatelj spozna metode za numerično reševanje parcialnih enačb. Pridobljeno znanje praktično utrdi z reševanjem domačih nalog.

Objectives and competences:

Student supplements knowledge of numerical differentiation, integration and numerical solving of ODE equations. By solving homeworks the obtained theoretical knowledge is consolidated.

Predvideni študijski rezultati:

Znanje in razumevanje:

Razumevanje delovanja metod za numerično reševanje parcialnih diferencialnih enačb. Sposobnost numeričnega reševanja parcialnih diferencialnih enačb s pomočjo računalnika. Sposobnost izbire najprimernejšega algoritma glede na lastnosti problema.

Uporaba: Numerično reševanje parcialnih diferencialnih enačb s pomočjo računalnika in ocenjevanje napak na podlagi teorije. V praksi (fizika, mehanika, kemija, ekonomija, ...) se pogosto pojavljajo parcialne diferencialne enačbe, ki jih ni mogoče rešiti drugače kot numerično.

Refleksija: Razumevanje teorije na podlagi uporabe.

Prenosljive spretnosti – niso vezane le na en

predmet: Spretnost uporabe računalnika pri reševanju matematičnih problemov. Razumevanje razlik med eksaktnim in numeričnim računanjem. Predmet konstruktivno nadgrajuje zahtevnejša znanja analize in drugih področij matematike.

Intended learning outcomes:

Knowledge and understanding: Understanding of numerical methods for solving partial differential equations. Ability of solving partial differential equations with the computer. Capability of choosing the most appropriate algorithm according to some features of the problem.

Application: Numerical solution of partial differential equations using a computer and error estimation based on theory. Problems that can not be solved any other way that numerically occurs very often in practise (physics, mechanics, chemistry, economy, ...).

Reflection: Understanding of theory through applications.

Transferable skills: Skill of using computer for solving numerical problems. Understanding differences between exact and numerical computing. Knowledge of analysis and other fields of mathematics is constructively upgraded.

Cilji in kompetence:

Študent spozna osnove računalniškega oblikovanja. Uporaba Bezierovih krivulj in ploskev, racionalnih Bezierovih krivulj in geometrijsko zveznih zlepkov.

Objectives and competences:

An introduction to computer aided geometric design, use of Bezier curves and surfaces, rational Bezier curves and geometrically smooth splines.

Predvideni študijski rezultati:

Znanje in razumevanje:

Razumevanje osnovnih pojmov krivulj in ploskev. Osnovno znanje programiranja v Matlabu ali Mathematici. Sposobnost implementacije postopkov na računalniku.

Uporaba:

Uporaba postopkov interpolacije in aproksimacije s polinomi in zlepki pri računalniškem oblikovanju.

Intended learning outcomes:

Knowledge and understanding:

Knowledge of basic facts on curves and surfaces. Basic programming skill in Matlab or Mathematica. Skill to implement algorithms in programming language.

Application:

Application of interpolation and approximation with polynomials and splines in CAGD.

Refleksija:
Razumevanje teorije na podlagi uporabe.
Prenosljive spretnosti – niso vezane le na en predmet: Spretnost uporabe teorije v praksi. Sposobnost povezovanja znanj iz numerične matematike, analize in računalništva. Kritično presojanje razlik med teorijo in prakso.

Reflection:
Understanding theory based on application.
Transferable skills:
Skill of using theory in practical use. Skill of interconnecting knowledge from numerical mathematics, analysis and computer science. Critical judgement of differences between theory and practical applications.

Metode poučevanja in učenja:
predavanja, vaje, domače naloge, konzultacije

	Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Modeliranje v zavarovalništvu:

- porazdelitve izgub,
- izračun agregatnih izplačil,
- modeliranje pogostnosti zahtevkov,
- rekurzivne metode za izračun agregatnih škod,
- teorija kredibilnosti,
- verjetnost bankrota,
- modeli za odvisna tveganja,

Content (Syllabus outline):

Mathematical models for insurance:

- loss distribution,
- methods to compute aggregate payments,
- modeling of the claim frequencies,
- recursive methods for aggregate loss computation,
- credibility theory,
- probability of default,

- modeli za ekstremne dogodke,
- stabilnost.

- dependent risks modeling,
- extreme events modeling,
- stability.

Temeljni literatura in viri / Readings:

- H. H. Panjer, G. E. Willmot: *Insurance Risk Models*, Schaumburg, Society of Actuaries, 1992.
- R. Kaas, M. Goovaerts, J. Dhaene, M Denuit: *Modern Actuarial Risk Theory*, Boston, Kluwer, 2001.
- M. Denuit, J. Dhaene, M. Goovaerts, R. Kaas: *Dependent Risks, Measures, Orders and Models*, Wiley, 2005.

- H. Bühlmann: *Mathematical Methods in Risk Theory*, Springer, 2005.
- P. Embrechts, C. Klüppelberg, T. Mikosch: *Modelling Extremal Events for Insurance and Finance*, Springer, 1997.

Cilji in kompetence:

Bolj kompleksni zavarovalni produkti zahtevajo bolj poglobljene matematične modele in bolj rafinirane mere tveganja. Tečaj bo prikazal ustaljene načine matematičnega razmišljanja v zavarovalništvu.

Zaradi nepostredne uporabnosti vsebin bodo pri predmetu sodelovali tudi strokovnjaki iz prakse.

Objectives and competences:

The complexity of the insurance products requires more and more sophisticated mathematical models and more refined measures of risk. The course will cover current mathematical modelling for insurance.

Since the content is of great practical importance we expect that also specialists from financial practice will present their work experience during the course.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje pojma tveganja in merjenja tveganja je bistvenega pomena za vrednotenje in razvoj zavarovalnih produktov. Za oceno tveganja pa je potrebno razumevanje osnovnih stohastičnih modelov, ki jih uporabljajo aktuarji pri svojem delu.

Uporaba: Pridobljeno znanje je neposredno uporabno v zavarovalnem sektorju.

Refleksija: Medigra med uporabo, statističnim modeliranjem, povratno informacijo iz drugih ved in spodbude iz uporabe za matematično razmišljanje.

Intended learning outcomes:

Knowledge and understanding: Understanding of risks and its measuring is a central issue in pricing and development of modern insurance products. Knowledge of the basic stochastic models for insurance is needed to assess the risks involved.

Application: The knowledge is directly applicable in insurance sector of the economy.

Reflection: Interplay between applications, statistical modelling and feedback information from other fields. Mathematical thinking based on concrete applications.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnosti so prenosljive na druga področja matematičnega modeliranja, še najbolj pa je predmet pomemben zaradi svoje neposredne uporabnosti.

Transferable skills: Skills are transferable to many other fields of mathematical modelling. The value of the course is in concrete applications to insurance.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homeworks, consultations

Načini ocenjevanja:

Delež (v %) /

Weight (in %)

študijskih obveznosti:**

Prerequisites:

Vpis v letnik študija

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Bayesovi modeli z enim in več parametri. Povezava s standardnimi statističnimi metodami. Hierarhični modeli. Preverjanje modelov in analiza občutljivosti. Bayesovo načrtovanje poskusov.

Bayesov pristop k združevanju rezultatov več raziskav, potenčne apriorne porazdelitve, analiza odvisnosti združene analize od preteklih raziskav.

Uvod v regresijsko analizo. Analiza variance in kovariance, informativne hipoteze in njihovo ovrednotenje. Bayesov faktor, kompleksnost in prilaganje. Aposteriorne verjetnosti hipotez - modelov, vpliv apriorne porazdelitve, učni vzorec.

Povzemanje aposteriorne porazdelitve, ocene parametrov, centralni kredibilnostni interval, pomen konjugiranih porazdelitev. Gibbsov vzorčevalnik, konvergenca ocen, Metropolis Hastingsov algoritem. Aposteriorne simulacije. Drugi specifični modeli Bayesove analize.

Bayesian models with one and more parameters. Connection with standard statistical methods. Hierarchical models. Testing of models and sensitivity analysis. Bayesian design of experiment.

Bayesian approach to evidence synthesis of multiple surveys, power priors, analysis of dependence of synthesis analysis on previous surveys.

Introduction into regression analysis. Analysis of variance and covariance. Hypothesis testing via Bayes factor, complexity and fit. Posterior probabilities of hypotheses – models, and influence of priors on them, training sample.

More on posterior probabilities, estimating parameters, central credibility interval, the importance of conjugated distributions. Gibbs sampler, convergence of estimates, algorithm Metropolis-Hastings. Posterior simulations. Some other specific models of Bayesian analysis.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Uvod: primeri časovnih vrst, trend in sezonska odstopanja, avtokorelacijska funkcija. Krepka in šibka stacionarnost. Hilbertovi prostori in napovedovanje, časovne vrste v R.
Stacionarni procesi: linearni procesi, ARMA modeli, vzročnost in obrnljivost ARMA procesov. MA procesi neskončnih redov. lastnosti, avtokorelacijska funkcija, napovedovanje stacionarnih procesov.
ARMA modeli: avtokorelacijska in parcialna

Content (Syllabus outline):

Introduction: Examples of time series. Trend and seasonality. Autocorrelation function. Multivariate normal distribution. Strong and weak stationarity. Hilbert spaces and prediction. Introduction to R.
Stationary sequences: Linear processes. ARMA models. Causality and invertibility of ARMA processes. Infinite order MA processes.
Partial autocorrelation function. Estimation of autocorrelation function and other parameters.

avtokorelacijska funkcija, ocenjevanje parametrov, diagnostične metode, napovedovanje.

Spektralna analiza: spektralna gostota, Herglotzov izrek, periodogram..

Nestacionarne in nelinearne časovne vrste: ARCH in GARCH modeli, Momenti in stacionarne porzdelitve za GARCH procese. Ekspontentni ARIMA modeli, SARIMA modeli, napovedovanje pri nestacionarnih časovnih vrstah.

Statistika stacionarnih procesov: Asimptotični rezultati, ocenjevanje trendov in sezonskih vplivov. Neparametrične metode.

Večrazsežne časovne vrste: stacionarnost, večrazsežni ARMA in ARIMA modeli, ocenjevanje parametrov, napovedovanje, razcep variance.

Forecasting stationary time series.

Modeling and forecasting for ARMA processes. Asymptotic behavior of the sample mean and the autocorrelation function. Parameter estimation for ARMA processes.

Spectral analysis: Spectral density. Spectral density of ARMA processes. Herglotz theorem. Periodogram.

Nonlinear and nonstationary time series models: ARCH and GARCH models. Moments and stationary distributiopn of GARCH process. Exponential GARCH. ARIMA models. SARIMA models. orecasting nonstationary time series.

Statistics for stationary process: Asymptotic results for stationary time series. Estimating trend and seasonality. Nonparametric methods.

Multidimensional time series: stacionarity, multidimensional ARMA and ARIMA models, parameter estimation, forecasting, variance decomposition.

Temeljni literatura in viri / Readings:

- P. J. Brockwell, R. A. Davis: *Introduction to Time Series and Forecasting*, 2nd edition, Springer, 2002.
- C. Chatfield: *The Analysis of Time Series: An Introduction*, 6th Edition, Chapman & Hall/CRC, 2003.

- W.N. Shumway, D. Stoffer: *Time Series Analysis and Its Applications*, Springer, 2006.

Cilji in kompetence:

Časovne vrste so eno od temeljnih področij uporabne statistike z možnimi uporabami tako v tehniki kot tudi v ekonomiji. Osnovni koncepti časovnih vrst so del statistične izobrazbe, poleg tega pa poglobijo in na novo osvetlijo že znane pojme iz statistike.

Zaradi nepostredne uporabnosti vsebin bodo pri predmetu sodelovali tudi strokovnjaki iz prakse.

Objectives and competences:

Time series course is one of fundamental courses of applied statistics with several applications to engineering and economics. Basic concepts of the time series analysis are part of necessary background of any statistical education. They deepen and shed new light on basic notions of statistics.

Since the content is of great practical importance we expect that also specialists from financial practice will present their work experience during the course.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje:

Predmet predstavi pomembno področje statistike, ki je vedno bolj pomembno v modeliranju finančnih in ekonomskih podatkov.

Uporaba

Makroekonomski analitiki ter ponudniki električne energije ali goriv uporabljajo časovne vrste za svoje napovedi. Poleg tega področje osvetljuje že prej znane pojme iz statistike.

Refleksija

Medigra med uporabo, statističnim modeliranjem, povratno informacijo ekonomije in tehnike in spodbude iz uporabe za matematično razmišljanje.

Prenosljive spretnosti – niso vezane le na en predmet

Spretnosti so neposredno uporabne v finančnem in zavarovalnem sektorju, predstavljajo pa tudi pomembno orodje za ekonomiste.

Knowledge and understanding:

Understanding of statistical applications to economics, modelling of economics and financial data.

Application:

In macroeconomic analysis or on energy markets, time series methods are the fundamental forecasting tool. This analysis deepens and sheds new light on basic notions of statistics.

Reflection:

The interplay between application, statistical modelling, economics feedback information, and application stimulation for mathematical reasoning.

Transferable skills:

The skills are directly applicable in finance and insurance. They are also an important tool for the economists.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije, seminarske naloge

Learning and teaching methods:

Lectures, exercises, homeworks, consultations, seminars

Načini ocenjevanja:

Delež (v %) /

Weight (in %)

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

vpis v letnik

Prerequisites:

enrollment to the program

Vsebina:

Uvod: definicija in mesto ekonometrije v ekonomski znanosti, osnovna metodologija ekonometričnih raziskav.
Linearna regresija: metoda najmanjših kvadratov, izrek Gauss-Markova, testiranje splošne linearne domneve, diagnostične metode, pomembne opazovane vrednosti, testi za ostanke, testi za linearnost, Cookov test.

Content (Syllabus outline):

Introduction: the definition and the place of econometrics in the economics, basic methodology of the econometric research.
Linear regression: the method of least squares, The Gauss-Markov Theorem, testing of the general linear assumption, diagnostic methods, important empirical values, residue tests, linearity tests, the Cook Test.
Generalized linear model: heteroskedasticity,

Posplošitve linearnega modela: heteroskedastičnost, avtokorelacija napak, stohastične neodvisne spremenljivke, nelinearni regresijski modeli, modeli z nepravilnimi spremenljivkami. **Kointegracija.**

Logit in probit modeli za dihotope in politome podatke.

Panelni podatki: ozadje modelov in definicije, ocenjevanje parametrov, preizkušanje domnev, večstopenjski panelni podatki, **modeli diskretne izbire.**

Simultani sistemi več regresijskih enačb: zapisi simultane sistema regresijskih enačb, identifikacija enačb sistema, izbrane metode ocenjevanja simultane sistema enačb.

Vektorska avtoregresija, preverjanje pravilnosti modela. Kointegrirana vektorska avtokorelacija.

autokorelacija napak, stohastično neodvisne spremenljivke, nelinearni regresijski modeli, modeli z instrumentalnimi spremenljivkami.

Cointegracija, logit in probit modeli za dihotope in politome podatke.

Panelni podatki: modeliranje in definicije, ocenjevanje parametrov, preizkušanje domnev, večstopenjski panelni podatki, **diskretne izbire.**

Simultani sistemi regresijskih enačb: različne oblike sistemov, identifikacijska enačba sistema, različne metode ocenjevanja simultane sistema enačb.

Vector autoregression, model verification. Cointegrated vector autocorrelation.

Temeljni literatura in viri / Readings:

- B. H. Baltagi: *Econometrics*, Springer, 1998.

Cilji in kompetence:

Uporaba statistike v ekonomskih vedah nujno vodi do ekonometrije. S tem nastane nov in globlji pogled na statistiko samo na eni strani, po drugi strani pa predmet da občutek za soigro ekonomskega in statističnega razmišljanja. Predmet je tudi nujen korak do uporabe statistike za ekonomsko analizo.

Zaradi neposredne uporabnosti vsebin bodo

Objectives and competences:

Statistical applications in economics naturally lead to econometrics. This gives new, deeper perspective to the statistics itself on one side, and to the interplay between statistics and economics on the other side. The course is a necessary prerequisite for anybody who will use statistics for the analysis of the processes in the economics.

pri predmetu sodelovali tudi strokovnjaki iz prakse.

Since the content is of great practical importance we expect that also specialists from financial practice will present their work experience during the course.

Predvideni študijski rezultati:

Znanje in razumevanje

Predmet omogoča neposreden vpogled v uporabo statistike v ekonomiji, nakaže načine razmišljanja in osvetli medigro med ekonomskim in statističnim razmišljanjem.

Uporaba

Statistika je jezik bolj kvantitativno usmerjene ekonomije. Ta predmet bo omogočal neposredno uporabo statistike po eni strani, po drugi pa se bodo diplomanti lahko brez težav vpisali tudi na doktorski študij ekonomije.

Refleksija

Medigra med uporabo, statističnim modeliranjem, povratno informacijo ekonomije in spodbude iz uporabe za matematično razmišljanje.

Prenosljive spretnosti – niso vezane le na en predmet

Spretnosti so prenosljive na druga področja matematičnega modeliranja, še najbolj pa je predmet pomemben zaradi svoje neposredne uporabnosti in brušenja zmožnosti matematičnega modeliranja.

Intended learning outcomes:

Knowledge and understanding:

Understanding of statistical applications to economics, interplay between statistical reasoning and economics.

Application:

Statistics is the language of the quantitative economics. On one side, application is immediate, on the other side the knowledge will satisfy to persue doctoral studies in economics.

Reflection:

The interplay between application, statistical modelling, economics feedback information, and application stimulation for mathematical reasoning.

Transferable skills:

The skills obtained are transferable to other areas of mathematical modelling, but the gist of the course is its immediate applicability.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homeworks, consultations

Načini ocenjevanja:

Delež (v %) /

Weight (in %) **Assessment:**

Prerequisites: Enrollment into the program

Vsebina: _____ **Content (Syllabus outline):** _____

Stohastična integracija:

Pregled sredstev iz analize, teorije mere in verjetnosti, Brownovo gibanje, martingali v zveznem času, stohastični integral, Itôva formula, stohastične diferencialne enačbe.

Vrednotenje izvedenih inštrumentov:

Black-Scholesov model, izvedeni inštrumenti, arbitraža in varovanje v splošnem, kompletnost modelov, zamenjava mere in izrek Girsanova, paritetne enakosti.

Modeli obrestnih mer:

Obveznice in obresti, nekaj klasičnih martingalskih modelov, vrednotenje opcij na obrestne mere.

Po potrebi predavatelj v tečaj vključi tudi druge aktualne teme iz novejše znanstvene periodike.

Stochastic integration:

Recapitulation of prerequisites from analysis, measure theory and probability, Brownian motion, continuous time martingales, stochastic integral, Itô formula, stochastic differential equations.

Pricing of financial derivatives:

Black-Merton-Scholes model, derivatives, arbitrage and hedging in general, model completeness, change of measure and Girsanov theorem, parity equations.

Interest rate models:

Bonds and interest, some classical martingale models, pricing of interest rate options. The lecturer can also include other current topics from recent scientific periodicals in the course.

Temeljni literatura in viri / Readings:

- B. Øksendal: Stochastic Differential Equations: An Introduction with Applications, 6th edition, Springer, Berlin, 2006.

Cilji in kompetence:

Modernejši modeli trga slonijo na stohastičnem računu. Predmet bi najprej predstavil stohastično integracijo do mere, ki je nujno potrebna za razumevanje modelov v finančni matematiki v zveznem času. Stohastične diferencialne enačbe potem omogočajo po eni strani sredstvo za modeliranje trgov, obrestnih mer in portfeljev, po drugi strani pa omogočajo njihovo učinkovito obravnavo, ki vodi do

Objectives and competences:

Modern market models are based on stochastic calculus. The course starts with a short introduction of stochastic integration which is needed for understanding the continuous time models in financial mathematics. Stochastic differential equations present on one hand the means for modeling the financial markets, interest rates and portfolios and on the other hand the tool for their efficient study, which leads to optimal

problemov optimalnega ustavljanja in stohastične kontrole.

stopping problems and to stochastic control theory.

Predvideni študijski rezultati:

Znanje in razumevanje:

Razumevanje matematičnih modelov, ki se uporabljajo v matematičnih financah in sredstev za njihovo obravnavo.

Uporaba:

Pridobljeno znanje je po eni strani neposredno prenosljivo, po drugi strani pa je izhodišče za kombiniranje matematičnega znanja z ekonomskimi vsebinami.

Refleksija:

Področje, in s tem posledično predmet, združuje številna znanja iz matematike od linearne algebre, do parcialnih diferencialnih enačb.

Prenosljive spretnosti – niso vezane le na en predmet:

Pridobljeno znanje je neposredno uporabno v finančnih ustanovah kot so banke in zavarovalnice. Vsebina predmeta tudi pomaga izostriti sposobnost matematičnega modeliranja.

Intended learning outcomes:

Knowledge and understanding:

Understanding of mathematical models, which are used in mathematical finance, and the means for their treatment.

Application:

The acquired knowledge is both: directly transferable and it also serves as a base for combining mathematical knowledge with economical content.

Reflection:

The area itself, and hence also the course, combines various mathematical disciplines: from linear algebra to partial differential equations.

Transferable skills:

The acquired knowledge is directly applicable in financial institutions, e.g. banks, insurance companies, ... The content of the course contributes to the sharpening of the ability of mathematical modeling.

Metode poučevanja in učenja:

predavanja, vaje, samostojna seminarska naloga

Predavanja / Lectures: slovenski/Slovene, angleški/English
Vaje / Tutorial: slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Osnove: obrestne mere, krivulje donosov, struktura obveznic, LIBOR obrestne mere. Nekaj elementarnih modelov, kratkoročni modeli, pojem arbitraže v teh modelih, Vasičkov model, model Cox-Ingersoll-Ros, model Hull-White. Modeli terminskih obrestnih mer v modelih z diskretnim in z zveznim časom. Klasični modeli, teorija Heatha. Jarrova in Mortona (HJM), modeli terminskih obrestnih mer, ki jih ženejo slučajna polja.

Content (Syllabus outline):

Basic notions: interest rates, yield curves, bond structures, LIBOR rates. Some elementary models, short rate models, no-arbitrage in short rate models, Vasicek, Cox-Ingersoll-Ross, Hull-White models. Forward interest rate models in discrete and continuous time settings. Classical cases, Heath-Jarrow-Morton (HJM) framework and forward rate models driven by random fields. No arbitrage criteria and drift conditions, change of numeraire, martingale methods.

Kriterij neobstoja arbitraže in pogoji usmeritve, zamenjava numerarja, martingalske metode.

Posebne teme: LIBOR modeli, obveznice in možnost propada, problemi vrednotenja izvedenih instrumentov na obrestne mere.

Statistična vprašanja v modelih obrestnih mer: metode za kalibracijo modelov, ocenjevanje parametrov.

Some special topics: LIBOR models, defaultable bonds, pricing problems of certain interest rate derivatives.

Statistical questions in interest rate models, calibration methods, parameter estimation.

Temeljni literatura in viri / Readings:

- T. Bjork., Arbitrage Theory in Continuous Time, Oxford University Press, Oxford, New York, 1998.

- A. Pelsser. Ecient Methods for Valuing Interest Rate Derivatives, Springer-Verlag, London, 2000.

Cilji in kompetence:

Predmet pokriva poglavja iz matematičnih financ, ki so pomembna za modeliranje krivulj obrestnih mer.

Zaradi nepostredne uporabnosti vsebin bodo pri predmetu sodelovali tudi strokovnjaki iz prakse.

Objectives and competences:

The course covers the chapter of mathematical finance that deal with modelling of the interest rate curves.

Since the content is of great practical importance we expect that also specialists from financial practice will present their work experience during the course.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje:

Razumevanje matematičnih modelov, ki se uporabljajo v matematičnih financah, in sredstev za njihovo obravnavo.

Uporaba:

Pridobljeno znanje je po eni strani neposredno prenosljivo, po drugi strani pa je izhodišče za kombiniranje matematičnega znanja s finančnimi vsebinami.

Refleksija:

Področje, in s tem posledično predmet, združuje številne znanja iz matematike, predvsem tistih povezanih s teorijo verjetnosti in matematično statistiko.

Prenosljive spretnosti – niso vezane le na en predmet:

Pridobljeno znanje je neposredno uporabno v finančnih ustanovah kot so banke in investicijske družbe.

Knowledge and understanding:

Understanding of mathematical models used in finance. Mathematical tools necessary in modelling.

Application:

The knowledge is directly usable in practice, it is also the source for combining of mathematical theories with finance.

Reflection:

The subject connects many mathematical topics, specially those of probability theory and statistics, with application.

Transferable skills:

The knowledge is directly applicable in everyday practice in financial institutions such as banks and investment companies.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije, seminarske naloge

- P. Embrechts, C. Klüppelberg, T. Mikosch: Modelling extremal events for insurance and finance, Springer-Verlag, Berlin, 1997.

Cilji in kompetence:

Predmet pokriva poglavja iz matematičnih financ, pri katerih se prepleta ekonomsko razmišljanje z zapletenimi matematičnimi orodji. Nekatera poglavja so nadgradnja prejšnjih z dodatnimi interpretacijami, nekatera pa so pomemben del razmišljanja o tveganju.

Zaradi nepostredne uporabnosti vsebin bodo pri predmetu sodelovali tudi strokovnjaki iz prakse.

Objectives and competences:

The course covers topics in mathematical finance in which economic reasoning is combined with advanced mathematical tools. Some of them are based on previous courses and give additional interpretation, some contribute to understanding of the risks.

Since the content is of great practical importance we expect that also specialists from financial practice will present their work experience during the course.

Predvideni študijski rezultati:

Znanje in razumevanje:

Razumevanje matematičnih modelov, ki se uporabljajo v matematičnih financah in sredstev za njihovo obravnavo.

Uporaba:

Pridobljeno znanje je po eni strani neposredno prenosljivo, po drugi strani pa je izhodišče za kombiniranje matematičnega znanja z ekonomskimi vsebinami.

Intended learning outcomes:

Knowledge and understanding:

Understanding of mathematical models used in mathematical finance and the mathematical tools used in solutions.

Application:

The knowledge and skills acquired are directly transferable and can also serve for combining mathematical reasoning with economic topics.

Refleksija:

Področje, in s tem posledično predmet, združuje številne znanja iz matematike od linearna algebre do parcialnih diferencialnih enačb.

Prenosljive spretnosti – niso vezane le na en predmet:

Pridobljeno znanje je neposredno uporabno v finančnih ustanovah kot so banke in zavarovalnice. Vsebina predmeta tudi pomaga izostriti sposobnosti matematičnega modeliranja.

Reflection:

The subject of the course, hence the course itself, combines numerous mathematical skills starting from linear algebra to partial differential equations.

Transferable skills:

The knowledge and skills acquired are immediately applicable in financial institutions such as banks and insurance companies. The content also serves to deepen the ability to use mathematical models.

Metode poučevanja in učenja:

predavanja, vaje, konzultacije, seminarske naloge

Learning and teaching methods:

Lectures, exercises, consultations, seminars

Načini ocenjevanja:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

- samostojna seminarska naloga
- opravljena seminarska naloga za pristop k teoretičnemu delu izpita

Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

Delež (v %) /

Weight (in %) /

Assessment:

Type (examination, oral, coursework, project):

- individual seminar
- completed seminar work is required for the exam on the course content

Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Predavatelj izbira med naslednjimi in drugimi aktualnimi temami:

Modeli pri upravljanju portfeljev: model povprečje-varianca. Markowitzeva teorija. Razpršenost donosov in njeno merjenje. Optimalne strategije. Teorija vrednotenja brez arbitraže. CAPM model. Enofaktorski in večfaktorski modeli. Modeli Bayesovega tipa. Black- Littermanov algoritem. Enoobdobni in večobdobni modeli. Linearni faktorski modeli. Vrednotenje naložb v zveznem času.

Content (Syllabus outline):

Lecturer can choose among the following and some other current topics:

Portfolio management: mean-variance model. Markowitz theory. Volatility of returns and its measurement. Arbitrage pricing. CAPM model. One and multifactor models. Bayesian models. Black-Litterman algorithm. One period and multiperiod models. Pricing in continuous time. Mathematical models for high frequency trading.
Consumption and investment: definitions,

Matematični modeli za algoritmično in visokofrekvenčno trgovanje.

Potrošnja in naložbe: definicije, optimizacijski problemi, ravnovesje, problemi s stranskimi pogoji, nepolni trgi.

Stohastična optimizacija: stohastična teorija upravljanja, Malliavinov račun. Viskoznostne rešitve.

optimization problems, general equilibrium, side conditions, incomplete markets.

Stochastic optimization: stochastic control theory, Malliavin calculus. Viscosity solutions.

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:		Prerequisites:	
Vpis v letnik študija		Enrollment into the program	

Vsebina:

Predavatelj izbere nekatere pomembne teme s področja teorije iger, kot so na primer:
Bimatrične igre. Število ravnovesij, njihovo učinkovito odkrivanje, stabilnost.
Kombinatorne igre. Igre na grafih.
Igre s ponavljanji.
Pogajanja, dražbe.
Uporabe teorije iger v družboslovju.
Teorija odločanja. Teorija socialne izbire.
Evolucijska teorija iger.
Eksperimentalna teorija iger.
Diferencialne igre.

Content (Syllabus outline):

The lecturer choose some important topics in game theory, for example:
Bimatrix games. Number of equilibria, efficient methods for finding equilibria, stability.
Combinatorial games. Games on graphs.
Repeated games.
Bargaining, auctions.
Applications of game theory in social sciences.
Decision theory. Social choice theory.
Evolutionary game theory.
Experimental game theory.
Differential games.

Temeljni literatura in viri / Readings:

A. Fraenkel: Combinatorial Games, Electron. J. Combinatorics, DS2, zadnja dopolnitev, 2006.
D. Fudenberg, J. Tirole: Game Theory, MIT Press, Cambridge MA, 1991.
P. Morris: Introduction to Game Theory, Springer, New York, 1994.
M. J. Osborne: An Introduction to Game Theory, Oxford University Press, Oxford, 2004.
M. J. Osborne, A. Rubinstein: A Course in Game Theory, 10. natis, MIT Press, Cambridge MA, 2004.

Cilji in kompetence:

Študent podrobneje spozna eno ali več pomembnejših področij teorije iger. Pri tem spozna nekatere najnovejše rezultate z obravnavanega področja.

Objectives and competences:

The student gains a deeper knowledge of some areas of game theory, including recent results.

Predvideni študijski rezultati:

Znanje in razumevanje:
Slušatelj natančneje spozna izbrano področje teorije iger. Seznan se z najnovejšimi rezultati tega področja in z njegovimi uporabami v praksi.
Uporaba: Modeliranje vsaj potencialno konfliktnih situacij in njihovo razreševanje s

Intended learning outcomes:

Knowledge and understanding:
The student gains a deeper understanding of the chosen area of game theory. He or she learns the newest results in the field and their applications.
Application:

pomočjo formalnih metod.

Refleksija: Uporabe in pomanjkljivosti opisovanja in raziskovanja pojavov iz vsakdanjega življenja s pomočjo formalnih modelov.

Prenosljive spretnosti – niso vezane le na en predmet: Sposobnost natančnega matematičnega opisa in zavedanje njegovih pomanjkljivosti. Sposobnost samostojnega študija sodobne strokovne in izbrane znanstvene literature.

Modelling in situations with a potential for conflict, finding the solution using formal methods.

Reflection:
Applications and shortcomings of descriptions and study of everyday life with the help of formal models.

Transferable skills:
Ability to set up a rigorous mathematical framework and understand its shortcomings.
Ability to study modern scientific papers and monographs independently.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije, **seminarske naloge**

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Aktuarski del:
Lundbergov proces, verjetnosti bankrota, martingalske metode, verjetnosti bankrota v končnem času, posplošitve Lundbergovega modela.
Modeliranje z markovskimi verigami, enačbe Kolmogorova, Thielejeve diferencialne enačbe, izračun matematičnih rezervacij, zvarovalni produkti z izplačili odvisnimi od matematičnih

Content (Syllabus outline):

Actuarial part:
Lundberg process, the probability of ruin, martingale methods, the probability of ruin in finite time, generalized Lundberg model. Markov chain models, Kolmogorov equations, Thiele differential equation, mathematical reserves calculation, reserves dependent payoffs, stochastic interest rates via Markov chains.

rezervacij, vpeljava slučajnih obrestnih mer z markovskimi verigami.

Finančni del:

Optimalna kontrola: formulacija problema, Hamilton-Jacobi-Bellmanove enačbe, linearni regulator, primeri uporabe.

Optimalno ustavljanje: formulacija problema, primeri, ameriške opcije.

Osnovni izrek vrednotenja opcij: formulacija, dokaz, enačbe za varovanje, povezava s parcialnimi diferencialnimi enačbami, primeri nekompletnih trgov.

Nekompletni trgi: Lévyjevi modeli, super-varovanje, vrednotenje, optimizacija.

Financial part:

Optimal control: formulation of the problem, Hamilton-Jacobi-Bellman equations, linear regulator, applications.

Optimal stopping: formulation of the problem, examples, American options.

Fundamental theorem of asset pricing: formulation, proof, hedging equations, connections to partial differential equations, examples of incomplete markets.

Incomplete markets: Lévy models, superhedging, pricing, optimization.

Temeljni literatura in viri / Readings:

- M. Denuit, J. Dhaene, M. Goovaerts, R. Kaas: *Dependent Risks, Measures, Orders and Models*, Wiley, New York, 2005.

- W. Schoutens: *Lévy Processes in Finance: Pricing Financial Derivatives*, Wiley, New York, 2003.

Cilji in kompetence:

Slučajni procesi so osnova za številne modele, ki se uporabljajo v finančnem in aktuarskem svetu. Tečaj se navezuje na teoretična tečaja iz slučajnih procesov in po eni strani odpira pot do uporabe, po drugi pa na drugačen način osvetli teoretične osnove.

Zaradi nepostredne uporabnosti vsebin bodo pri predmetu sodelovali tudi strokovnjaki iz prakse.

Objectives and competences:

Stochastic processes form a basis for numerous models in finance and insurance. The course links theoretical parts learned in other courses on stochastic processes by showing their applications on one side and elucidates the theoretical background on the other.

Since the content is of great practical importance we expect that also specialists from financial practice will present their work experience during the course.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje modeliranja s slučajnimi procesi v financah in aktuarstvu in razumevanja matematičnih orodij in predpostavk.

Uporaba: Uporaba je neposredna, saj so obravnavani modeli izhodišče za vrednotenje mnogih finančnih in zavarovalnih produktov.

Refleksija: Uporaba slučajnih procesov utrdi znanje iz verjetnosti in slučajnih procesov po eni strani, po drugi pa odpira pot do praktične uporabe teorije slučajnih procesov.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnosti so prenosljive na druga področja matematičnega modeliranja, še najbolj pa je predmet pomemben zaradi svoje neposredne uporabnosti.

Intended learning outcomes:

Knowledge and understanding: Understanding of stochastic modelling in finance and insurance and understanding of mathematical framework.

Application: Application is immediate as the models under consideration form a basis for Pricing many financial and insurance products.

Reflection: The application of stochastic processes deepens the knowledge of probability calculus and stochastic processes and paves the way for their application.

Transferable skills: The skills obtained are transferable to other areas of mathematical modelling, but the gist of the course is its immediate applicability.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije, seminarsek naloge

Vrsta predmeta / Course type: izbirni predmet/elective course

Univerzitetna koda predmeta / University course code: še ni dodeljena/not assigned yet

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
30	15	30			105	6

Nosilec predmeta / Lecturer: prof. dr. Matjaž Omladič, doc. dr. Dejan Velušček

Jeziki / Languages:
Predavanja / Lectures: slovenski/Slovene, angleški/English
Vaje / Tutorial: slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Algoritmi za vrednotenje opcij v diskretnem času. Monte Carlo metode za evropske opcije. Simulacije klasičnih porazdelitev. Metoda inverzne transformacije. Izračun matematičnega upanja.
 Tehnike za zmanjšanje variance. Drevesne metode za evropske in ameriške opcije. Red konvergence v binomskih metodah.
 Ocenjevanje občutljivosti. Numerični algoritmi za zaščito portfeljev. Drevesne metode in metode Monte Carlo za eksotične opcije

Content (Syllabus outline):

Algorithms for option pricing in discrete models. Monte Carlo Methods for European options.
 Simulation methods of classical law. Inverse transform method. Computation of expectation.
 Variance reduction techniques. Tree methods for European and American options. Convergence orders of binomial methods. Estimating sensitivities. Numerical algorithms for portfolio insurance. Tree methods and Monte Carlo methods for Exotic options (barrier options,

(opcije z mejo, azijske opcije, povratne opcije, mavrične opcije).

Monte Carlo metode za ameriške opcije.

Metode končnih diferenc za Black-Scholesovo parcialno diferencialno enačbo.

asian options, lookback options, rainbow options).

American Monte Carlo methods.

Finite difference methods for the Black-Scholes partial differential equation.

Temeljna literatura in viri / Readings:

- J. Hull. Options, Futures, and Other Derivatives. Prentice Hall, 2011.
- N. H. Bingham, R. Kiesel. Risk-Neutral Valuation: Pricing and Hedging of Financial Derivatives. Springer Finance, 2004.
- P. Glasserman. Monte Carlo Methods in Financial Engineering. Springer, 2003.

Cilji in kompetence:

Predmet pokriva poglavja iz matematičnih financ, ki so pomembna za numerične izračune pri vrednotenju izvedenih finančnih instrumentov vseh vrst.

Zaradi nepostredne uporabnosti vsebin bodo pri predmetu sodelovali tudi strokovnjaki iz prakse.

Objectives and competences:

The course covers the chapter of mathematical finance that deal with numerical methods for pricing of derived financial instruments of all kinds.

Since the content is of great practical importance we expect that also specialists from financial practice will present their work experience during the course.

Predvideni študijski rezultati:

Znanje in razumevanje:

Razumevanje matematičnih modelov, ki se uporabljajo v matematičnih financah, in sredstev za njihovo obravnavo.

Uporaba:

Pridobljeno znanje je po eni strani neposredno prenosljivo, po drugi strani pa je izhodišče za kombiniranje matematičnega znanja s finančnimi vsebinami.

Refleksija:

Področje, in s tem posledično predmet, združuje številne znanja iz matematike, predvsem tistih povezanih s numeričnimi metodami in teorijo verjetnosti.

Prenosljive spretnosti – niso vezane le na en predmet:

Intended learning outcomes:

Knowledge and understanding:

Understanding of mathematical models used in finance. Mathematical tools necessary in modelling.

Application:

The knowledge is directly usable in practice, it is also the source for combining of mathematical theories with finance.

Reflection:

The subject connects many mathematical topics, specially those of numerical methods and probability theory, with application.

Transferable skills:

The knowledge is directly applicable in everyday practice in financial institutions.

Pridobljeno znanje je neposredno uporabno v finančnih ustanovah .

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije, seminarske naloge

Learning and teaching methods:

Lectures, exercises, homeworks, consultations, seminars

Načini ocenjevanja:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

- samostojna seminarska naloga
- ustni izpit

Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

Delež (v %) /

Weight (in %) /

Assessment:

Type (examination, oral, coursework, project):

- seminar work
- oral exam

Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)

Predavanja / Lectures:	slovenski, angleški/Slovene, English
Vaje / Tutorial:	slovenski, angleški/Slovene, English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
Vpis v letnik študija	Enrollment into the program

Vsebina: **Content (Syllabus outline):**

Linearno Programiranje:

Teorija in algoritmi, metoda simpleksov, metode notranjih točk, programski paketi za praktično reševanje. Linearni modeli v financah: osnovni izrek o vrednotenju, vrednotenje izvedenih finančnih instrumentov v odsotnosti arbitraže, uporaba linearnega programiranja pri klasifikaciji podatkov ipd

Kvadratično programiranje:

Pogoj optimalnosti, dualnost, metode notranjih točk, programska orodja za praktično reševanje. Finančni modeli: različni načini izbire in upravljanja portfelja, maksimiziranje Sharpeovega razmerja, mean-variance optimizacija idr.

Optimizacija na stožcih:

Pregled teorije in praktičnih algoritmov. Finančni modeli: arbitraža z minimalnim tveganjem, aproksimacija kovariantnih matrik idr.

Stohastično programiranje:

Uporaba stohastičnih modelov, modeliranje ob upoštevanju negotovosti, metode za reševanje. Primeri finančnih modelov: izbor in upravljanje s portfelji, optimizacija z izogibanjem tveganja ipd.

Dinamično programiranje:

Pregled teorije in osnovnih metod za reševanje, dinamično programiranje v diskretnem in zveznem času, zvezni prostor stanj, optimalno upravljanje. Primeri finančnih modelov: dinamična analiza portfelja, problem optimalnega ustavljanja idr.

Po potrebi predavatelj v tečaj vključi tudi druge aktualne teme iz novejših znanstvenih periodik.

Zaradi neposredne uporabnosti vsebin bodo pri predmetu sodelovali tudi strokovnjaki iz prakse.

Linear programming:

Theory and algorithms, simplex method, interior point methods, software packages for practical problem solving. Linear models in finance: the basic theorem of asset pricing, the pricing of financial derivatives in the arbitrage-free setting, use of linear programming for data classification, etc.

Quadratic programming:

Condition for optimality, duality, interior point methods, software packages for practical problem solving. Financial models: various methods for creating and managing a portfolio, maximization of the Sharpe's ratio, mean-variance optimization, etc.

Cone programming:

Overview of the theory and of the practical algorithms.

Financial models: minimal risk arbitrage, covariant matrix approximation, etc.

Stochastic programming:

Use of stochastic models, modeling with uncertainty, methods for solving various stochastic programming problems. Examples in finance: portfolio building and management, risk averse optimization, etc.

Dynamic programming:

Overview of the theory and of the basic methods for problem solving, dynamic programming in discrete and continuous time, continuous state space, optimal control. Examples in financial models: dynamic portfolio analysis, optimal stopping problem, etc.

The lecturer can also include other current topics from recent scientific periodicals in the course.

Since the content is of great practical importance we expect that also specialists from financial practice will present their work experience during the course.

Temeljni literatura in viri / Readings:

- D. P. Bertsekas, Dynamic programming and optimal control, Athena Scientific, 2005.
- V. Chvátal: Linear Programming, Freeman, New York, 1983.
- G. Cornuejols, R. Tütüncü: Optimization Methods in Finance, Cambridge Univ. Press, Cambridge, 2007.

- S. Zenios: Financial Optimization, Cambridge Univ. Press, Cambridge, 1996.

Cilji in kompetence:

Študent spozna nekatere osnovne vrste optimizacijskih problemov, še posebej tiste, s katerimi lahko modeliramo probleme s področja financ. Seznan se z osnovnimi matematičnimi prijemi za njihovo reševanje, hkrati pa za praktično reševanje uporablja tudi primerne programske pakete.

Objectives and competences:

Students acquire knowledge on the basic types of optimization problems, the stress being on the problems suitable for modeling problems coming from the field of finance. The students get acquainted with the basic mathematical approaches for solving the above optimization problems and use suitable software packages for solving practical problems.

Predvideni študijski rezultati:

Znanje in razumevanje:

Sposobnost dobro opisati različne probleme s področja financ z matematičnim modelom. Poznavanje osnovnih prijemov in računalniških orodij za učinkovito reševanje dobljenih optimizacijskih problemov.

Uporaba:

Reševanje zahtevnejših praktičnih optimizacijskih problemov s področja financ.

Refleksija:

Pomen predstavitve praktičnih problemov v formalizirani obliki, ki omogoča njihovo učinkovito in pravilno reševanje.

Prenosljive spretnosti – niso vezane le na en predmet:

Modeliranje nalog iz vsakdanjega življenja v obliki matematičnih optimizacijskih nalog, zmožnost razločevanja med računsko obvladljivimi in neobvladljivimi problemi, sposobnost samostojnega modeliranja in reševanja z računalnikom.

Intended learning outcomes:

Knowledge and understanding:

The ability to describe various problems from the field of finance with a mathematical model. Knowledge on the basic approaches and software tools for efficient solving of the acquired optimization problems.

Application:

Solving more demanding practical optimization problems in finance.

Reflection:

The importance of presenting practical problems in formalized form which enables their efficient and correct solving.

Transferable skills:

Modeling the real-life problems in the form of a mathematical optimization problem, the ability to distinguish between computationally tractable and intractable problems, the ability to model and solve the problem on one's own using the computer.

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Arrow-Debreujev model za izmenjalne ekonomije s končno mnogo dobrinami in porabniki.

Kakutanijev izrek o negibni točki.

Walrasovo ravnovesje v neoklasični izmenjalni ekonomiji.

Izreka o blagostanju.

Rieszovi prostori. Linearni funkcionali in linearni operatorji.

Rieszovi prostori dobrin in cen.

Model izmenjalne ekonomije z neskočnorazsežnim prostorom dobrin in števno mnogo porabniki.

The Arrow-Debreu model for exchange economies with a finite number of commodities and consumers.

Kakutani fixed-point theorem.

A Walras equilibrium in a neoclassical exchange economy.

Welfare theorems.

Riesz spaces. Linear functionals and linear operators.

Riesz spaces of commodities and prices.

Model for exchange economy with infinite-dimensional space of commodities and countably many consumers.

Temeljni literatura in viri / Readings:

- C. D. Aliprantis, O. Burkinshaw: *Locally solid Riesz spaces with applications to economics*, Mathematical Surveys and Monographs 105, American Mathematical Society, Providence, RI, 2003.

Cilji in kompetence:

Študent spozna uporabo teorije Rieszovih prostorov v matematični ekonomiji. Pri tem se seznanja z nekaterimi modeli za izmenjalne ekonomije.

Objectives and competences:

Students learn about the application of the theory of Riesz spaces in mathematical economics. They get acquainted with some models of exchange economies.

Predvideni študijski rezultati:

Znanje in razumevanje:

Poznavanje in razumevanje osnovnih pojmov teorije Rieszovih prostorov. Sposobnost njene uporabe v matematični ekonomiji.

Uporaba:

Uporaba teorije Rieszovih prostorov na modelih za izmenjalne ekonomije.

Intended learning outcomes:

Knowledge and understanding:

Knowledge and understanding of the basic concepts of the theory Riesz spaces. The ability of its use in mathematical economics.

Application:

Using the theory of Riesz spaces on models of exchange economies.

Refleksija:

Razumevanje teorije na podlagi primerov in uporabe.

Prenosljive spretnosti – niso vezane le na en predmet:

Identifikacija in reševanje problemov.

Formulacija nematematičnih problemov v matematičnem jeziku.

Spretnost uporabe domače in tuje literature.

Reflection:

Understanding of the theory and the ability to apply it to concrete examples.

Transferable skills:

Identifying and solving problems.

Formulation of nonmathematical problems in mathematical language.

Ability to use domestic and foreign literature.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije, seminarske naloge

Learning and teaching methods:

Jeziki / Languages:

Predavanja / Lectures:	slovenski/Slovene
Vaje / Tutorial:	slovenski/Slovene

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vpis v letnik študija

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Brownovo gibanje:

Osnovne lastnosti, obstoj, lastnosti trajektorij, naravna filtracija, čas prvega dotika, markovske lastnosti, krepka lastnost Markova, princip zrcaljenja, pridruženi procesi (proces tekočega supremuma, Brownov most itd.), kvadratična variacija.

Martingali v zveznem času:

Filtracije, časi ustavljanja, martingali, izreki o ostavljanju, enakomerna integrabilnost, maksimalne neenakosti, konvergenca martingalov.

Stohastični integral:

Stohastični integral glede na Brownovo gibanje, Itôva izometrija, zvezni polmartingali, zvezni lokalni martingali, kvadratična variacija in kovariacija, stohastični integral glede na zvezne polmartingale, Itôva formula, izrek Girsanova, izrek o reprezentaciji martingalov.

Brownian motion:

Basic properties, existence, path properties, natural filtration, first hitting time, Markov properties, strong Markov property, reflection principle, associated processes (running supremum process, Brownian bridge etc.), quadratic variation.

Continuous time martingales:

Filtrations, stopping times, stopping theorems, uniform integrability, maximal inequalities, convergence of martingales.

Stochastic integral:

Stochastic integral wrt Brownian motion, Itô isometry, continuous semimartingales, local martingales, quadratic variation and covariation, stochastic integral wrt continuous semimartingales, Itô's formula, Girsanov Theorem, representation of martingales.

Temeljni literatura in viri / Readings:

- S. Resnick: *Adventures in Stochastic Processes*, Birkhäuser Boston, 2002.
- I. Karatzas, S. E. Shreve: *Brownian Motion and Stochastic Calculus*, 2nd Edition, Springer, 2005.
- M. Yor, D. Revuz: *Continuous Martingales and Stochastic Calculus*, 2nd Edition, Springer, 2004
- J. M. Steele: *Stochastic Calculus and Financial Applications*, Springer, New York, 2001.

Cilji in kompetence:**Objectives and competences:**

Predmet predstavlja uvod v teorijo slučajnih procesov v zveznem času z zveznimi trajektorijami. Rigorozno obravnava Brownovo gibanje kot osnovni primer in gradnik, vpelje martingale v zveznem času, Itôv stohastični račun in Itovo formulo.

This course is an introduction to the theory of stochastic processes in continuous time with continuous sample paths. It rigorously treats Brownian motion as a basic example and building block, introduces martingales in continuous time, stochastic calculus and Ito's formula.

Predvideni študijski rezultati:

Znanje in razumevanje:

Matematična orodja za strogo obravnavo in uporabo slučajnih procesov.

Uporaba:

Osnova za modeliranje v mnogih vejah matematike in njene uporabe.

Refleksija:

Vsebina predmeta pomaga za nazaj poglobiti razumevanje konceptov verjetnosti, koncepta odvisnosti in časa.

Prenosljive spretnosti – niso vezane le na en predmet:

Spretnosti so prenosljive na druga področja matematičnega modeliranja, še najbolj pa je predmet pomemben zaradi svoje neposredne uporabnosti pri finančnem modeliranju.

Intended learning outcomes:

Knowledge and understanding:

Mathematical tools for rigorous treatment and applications of stochastic processes.

Application:

Basic tools for modelling in many branches of Mathematics and its applications.

Reflection:

The contents of the course help in retrospect to deepen the understanding of the concepts of probability, dependence and time.

Transferable skills:

The skills acquired are transferable to other areas of mathematical modelling, in particular it is immediately applicable to financial models.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homeworks, consultations

Nosilec predmeta / Lecturer: prof. dr. Mihael Perman, prof. dr. Matjaž Omladič, doc. dr. Oliver Dragičević

Jeziki / Languages:

Predavanja / Lectures:	slovenski/Slovene
Vaje / Tutorial:	slovenski/Slovene

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vpis v letnik študija

Enrollment into the program

Vsebina:

Lévyjevi procesi, Lévy-Hinčinova formula, skočne mere, konstrukcija Lévyjevih procesov; Potencialna teorija, reševanje parcialnih diferencialnih enačb s pomočjo stohastičnih procesov; Osnove stohastičnih diferencialnih enačb, Ornstein-Uhlenbeckov proces.

Content (Syllabus outline):

Lévy processes, Lévy-Khintchine formula, jump measures, construction of Lévy processes; Potential theory, solving PDE by means of stochastic processes; Basic concepts of stochastic differential equations, the Ornstein-Uhlenbeck process.

Temeljni literatura in viri / Readings:

- N.V. Krylov: Introduction to the Theory of Random Processes, Graduate Studies in Mathematics, vol. 43, American Mathematical Society, 2002.
- D.W. Stroock: Probability Theory: an analytic view, Cambridge University Press, 2003.
- R. Bass: Probabilistic Techniques in Analysis, Springer-Verlag, 1995.
- R. Durrett: Stochastic Calculus: A Practical Introduction, CRC Press, 1996.

Cilji in kompetence:

V okviru predmeta opravimo uvod v teorijo Lévyjevih procesov, prikaz probabilističnega pristopa k potencialni teoriji ter parcialnim diferencialnim enačbam, na koncu pa spoznamo še osnove stohastičnih diferencialnih enačb.

Objectives and competences:

Within the course we present an introduction to the theory of Lévy processes, we learn about the probabilistic approach to the potential theory and partial differential equations, and finally we meet the basics of stochastic differential equations.

Predvideni študijski rezultati:**Znanje in razumevanje:**

Poglobitev študija in rigorozna obravnava nekaterih posebnih lastnosti slučajnih procesov, verjetnostni pristop k problemom iz parcialnih diferencialnih enačb.

Uporaba:

Osnova za modeliranje v mnogih vejah matematike in njene uporabe.

Refleksija:

Spoznavanje globljih povezav med različnimi vejami matematike, podrobna obravnava skokov.

Prenosljive spretnosti – niso vezane le na en predmet:

Spretnosti so prenosljive na druga področja matematičnega modeliranja, med drugim finančnem modeliranju.

Intended learning outcomes:**Knowledge and understanding:**

Deepening of study and rigorous treatment of certain particular features of stochastic processes, probabilistic approach to problems from PDE.

Application:

Basic tools for modelling in many branches of mathematics and its applications.

Reflection:

Learning about deeper connections between various areas of mathematics, meticulous treatment of jumps.

Transferable skills:

The skills acquired are transferable to other areas of mathematical modelling, among the rest to financial models.

Metode poučevanja in učenja:**Learning and teaching methods:**

predavanja, vaje, domače naloge, seminarske naloge	Lectures, exercises, homeworks, seminars

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
Vpis v letnik študija	Enrollment into the program

Vsebina:	Content (Syllabus outline):
<p>Linearne metode pri obdelavi podatkov: Linearna regresija, multipli in parcialni korelacijski koeficient, cenilke po metodi najmanjših kvadratov, izrek Gauss-Markova, kanonična redukcija linearnega modela, preizkušanje domnev, diagnostične metode, napovedovanje, posplošitve linearne regresije.</p> <p>Analiza variance: Klasifikacija po enem faktorju, klasifikacija po dveh faktorjih, preizkusi značilnosti.</p>	<p>Linear methods for data analysis: Linear regression, multiple and partial correlation coefficients), canonical correlation analysis, least square estimators, Gauss-Markov theorem, canonical reduction of the linear model, hypothesis testing, prediction, generalizations of linear regression.</p> <p>Analysis of variance: One factor classification, two-factor classification, test of significance.</p>

Ocenjevanje parametrov: zadostnost, kompletnost, nepristranskost, cenilke z enakomerno najmanjšo disperzijo, Rao-Cramérjeva meja, metoda največjega verjetja, metoda minimax, asimptotične lastnosti cenilk.

Preizkušanje domnev: Osnove (neslučajne in slučajne domneve, napake pri preizkušanju, moč preizkusa). Enakomerno najmočnejši preizkusi, Neyman-Pearsonova lema, preizkušanje v splošnih parametričnih modelih, preizkušanje na podlagi razmerja verjetij, Wilksov izrek, preizkušanje v neparametričnih modelih.

Območja zaupanja: Konstrukcija, pivotne količine, lastnosti, asimptotična območja zaupanja. Konstrukcija intervalov zaupanja s bootstrap metodo.

Multivariatne metode: Metoda glavnih komponent, faktorska analiza, diskriminantna analiza, razvrščanje.

Osnove Bayesove statistike Bayesova formula, podatki, verjetje, apriorne in aposteriorne porazdelitve, konjugirani pari porazdelitev, ocenjevanje parametrov v Bazseovi statistiki, preizkušanje domnev v Bayesovem okviru.

Parameter estimation: consistency, completeness, unbiased estimators, efficient estimators, best linear estimator, Rao-Cramer boundary, maximum likelihood method, minimax method, asymptotical properties of estimators.

Testing of hypotheses: Fundamentals (probablistic and nonprobablistic hypotheses, types of errors, best tests). Neyman-Pearson lemma, uniformly most powerful tests, test in general parametric models, Wilks theorem, non-parametric tests.

Confidence intervals: Constructions, pivots, properties of confidence regions, asymptotic properties, the bootstrap.

Multivariate analysis: Principal component analysis, factor analysis, discriminant analysis, classification methods.

Basic Bayesian statistics: Bayes formula, data, likelihood, apriori and aposteriory distributions, conjugate distributions pairs, Bayesian parameter estimation, Bayesian hypothesis testing.

Temeljni literatura in viri / Readings:

- K. V. Mardia, J. T. Kent, J. M. Bibby: *Multivariate Analysis*, Academic Press, 1979.

Cilji in kompetence:

Objectives and competences:

Pri predmetu bi postavili teoretične osnove statističnega modeliranja in obdelali osnovne sklope statističnega razmišljanja. Nekaj globlje matematično znanje je potrebno za dobro utemeljeno uporabo statistike. **Spoznali bomo tudi osnove Bayesove statistike.**

Theoretical basis for the statistical modeling will be presented. Deeper mathematical methods are needed for well grounded statistical applications. **Fundamentals of Bayesian analysis will be presented.**

Predvideni študijski rezultati:

Znanje in razumevanje:

Razumevanje pojma statističnega modela in matematičnega ozadja modeliranja, ocenjevanja in testiranja statističnih modelov.

Uporaba:

Statistika je eno najbolj uporabnih področij matematike. Študent bo na podlagi samostojnih projektov usposobljen za uporabo statistike na vseh področjih.

Refleksija:

Medigra med uporabo, statističnim modeliranjem, povratno informacijo iz drugih ved in spodbude iz uporabe za matematično razmišljanje.

Prenosljive spretnosti – niso vezane le na en predmet:

Spretnosti so prenosljive na druga področja matematičnega modeliranja, še najbolj pa je predmet pomemben zaradi svoje neposredne uporabnosti.

Intended learning outcomes:

Knowledge and understanding:

Understanding of statistical applications to economics, interplay between statistical reasoning and economics.

Application:

Statistics is the language of the quantitative economics. On one side, application is immediate, on the other side the knowledge will satisfy to persue doctoral studies in economics.

Reflection:

The interplay between application, statistical modelling, economics feedback information, and application stimulation for mathematical reasoning.

Transferable skills:

The skills obtained are transferable to other areas of mathematical modelling, but the gist of the course is its immediate applicability.

Metode poučevanja in učenja:

predavanja, vaje, 2 samostojna projekta

Learning and teaching methods:

	Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vpis v letnik študija

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Markovske verige v diskretnem času: Slučajni procesi in markovska lastnost. Teorija markovskih verig. Povezava s teorijo grafov in linearno algebro. Osnovna struktura verig. Časi prvih prehodov in vrnitev. Povrnjiva in minljiva stanja. Poljubno mnogo obiskov stanja. Ergodično obnašanje verige. Limitni izreki. Posebnosti v končnem.

Markovske verige v zveznem času: Poissonov tok in Poissonov proces. Rojstni procesi: reševanje enačb Kolmogorova. Zvezna markovska lastnost. Naprejšnje in nazajšnje enačbe Kolmogorova in njihove rešitve. Stacionarna porazdelitev. Obratna pot do markovskih verig. Stabilnost in eksplozije. Diferencialne enačbe in generator polgrupe.

Uporaba markovskih verig: Čakalni sistemi (rojstno smrtni čakalni sistem, čakalni sistem M/M/1, osnovni pojmi teorije strežnih sistemov, nekateri pomembni primeri čakalnih sistemov). Metoda Monte Carlo markovskih verig (Bayesova statistika in Monte Carlo simulacije, algoritma Gibbsov vzorčevalnik in Metropolis-Hastings, konvergenca algoritmov, aplikacije v finančni matematiki).

Discrete time markov chains: Random processes and Markov property. Markov chain theory. Connections to graph theory and linear algebra. Basic structure of a chain. Times of first passage and first return. Recurrent and transient states. Infinitely many visits of a state. Ergodic behaviour of a chain. Limit theorems. Specific results for the case of finite number of states.

Continuous time markov chains: Poisson flow and Poisson process. Birth processes: solving Kolmogorov equations. Continuous time Markov property. Forward and backward Kolmogorov equations and their solutions. Stationary distribution. Reverse approach. Stability and explosions. Differential equations and generator of a one-parameter semigroup.

Applications of markov chains: Waiting queue systems (birth&death system, M/M/1, introduction into the general theory, some important cases of waiting queue systems). Monte Carlo markov chains (Bayesian statistics and Monte Carlo simulations, Gibbs sampler and Metropolis-Hastings algorithm, convergence of MCMC algorithms, applications in Financial Mathematics).

Temeljni literatura in viri / Readings:

- J. R. Norris: *Markov Chains*, Cambridge Univ. Press, Cambridge, 1999.
- S. I. Resnick: *Adventures in Stochastic Processes*, Birkhäuser, Boston, 1992.

Cilji in kompetence:

Pri predmetu obravnavamo vrsto posebnih verjetnostnih vsebin, pri katerih ni potrebno globoko teoretično predznanje, so pa pomembne za uporabo. Poudarek je predvsem na ergodični teoriji, tako v diskretnem kot zveznem času. Uporabe vključujejo teorijo čakalnih sistemov ter MCMC metode.

Objectives and competences:

The course provides a certain number of probability themes that do not need deep theoretical knowledge. However they are important in view of applications. The emphasis is on ergodic theory, both in discrete and continuous time. Applications include waiting queue systems and MCMC methods.

Predvideni študijski rezultati:**Znanje in razumevanje:**

Spoznavanje nekaterih najpomembnejših aplikacij verjetnosti.

Intended learning outcomes:**Knowledge and understanding:**

The knowledge of some of the most important applications of probability is acquired.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Prerequisites:

Enrollment into the program

Vsebina:

V dogovoru s strokovnimi sodelavci v podjetjih bomo na Oddelku za matematiko pripravili seznam možnih podjetij in ustanov, na katerih lahko študenti opravljajo praktično usposabljanje. Usposabljanje bo koordinirano in pripravljeno v sodelovanju med učiteljem na fakulteti in zaposlenimi v podjetjih. Študent lahko obveznosti predmeta opravi tudi z izdelavo projektne dela.

Content (Syllabus outline):

Department of Mathematics will prepare a list of possible providers of working experience (based on previous agreement). Working experience will be planned and coordinated by the lecturer and the responsible person from the company. Student can fulfill the course requirements also by a project work.

Temeljna literatura in viri / Readings:

- Navodila za delo/work instructions.
- Priročniki/manuals.
- Notranji akti organizacije, ki nudi praktično usposabljanje/ Organization's internal acts.

Cilji in kompetence:

Študenti se ob praktičnem usposabljanju povežejo pridobljeno znanje s prakso. Pridobijo praktične izkušnje v delovnem okolju. Spoznajo se s problematiko sodobnega informacijskega ali tehnološkega podjetja ali druge ustanove.

Objectives and competences:

Students combine working experience and professional knowledge. They acquire practical experiences in the frame of working environment. Students acquire knowledge about modern information or technological company or some other institution.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje in razumevanje zapletenih odnosov praktičnega sodelovanja matematika v delovnem okolju.

Uporaba: Uporaba praktičnih izkušenj pri oblikovanju poklicne poti.

Refleksija: Razumevanje praktičnega dela v konkretnem delovnem okolju in uporaba pridobljenega znanja pri praktičnih problemih.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnost uporabe matematičnega znanja v delovnem okolju.

Intended learning outcomes:

Knowledge and understanding: Knowledge and understanding of complicated relationships between a mathematician and working environment.

Application: Application of practical experiences into working carrier.

Reflection: Understanding of practical work in a particular working environment and application of the academic knowledge for solving practical problems.

Transferable skills: Ability of transferring mathematical knowledge into a working environment.

Metode poučevanja in učenja:

praktično usposabljanje

Learning and teaching methods:

working experience

Načini ocenjevanja:

Praktično delo, zaključno poročilo o praktičnem usposabljanju
Ocene: opravljen/nepopravljen (po Statutu UL)

Delež (v %) /

Weight (in %)

Assessment:

Practice, final report

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet: Delovna praksa 2
Course title: Work experience 2

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Magistrski študijski program 2. stopnje Finančna Matematika	ni smeri	drugi	drugi
Second cycle master study program Financial Mathematics	none	drugi	drugi

Vrsta predmeta / Course type izbirni predmet/elective course

Univerzitetna koda predmeta / University course code: še ni določena/not assigned yet

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
0	15	0			165	6

Nosilec predmeta / Lecturer: prof. dr. Matjaž Omladič, prof. dr. Tomaž Košir, doc. dr. Janez Bernik

Jeziki / Languages:
Predavanja / Lectures: slovenski/Slovene, angleški/English
Vaje / Tutorial: slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

V dogovoru s strokovnimi sodelavci v podjetjih bomo na Oddelku za matematiko pripravili seznam možnih podjetij in ustanov, na katerih lahko študenti opravljajo praktično usposabljanje. Usposabljanje bo koordinirano in pripravljeno v sodelovanju med učiteljem na fakulteti in zaposlenimi v podjetjih. Študent lahko obveznosti predmeta opravi tudi z izdelavo projektnega dela.

Content (Syllabus outline):

Department of Mathematics will prepare a list of possible providers of working experience (based on previous agreement). Working experience will be planned and coordinated by the lecturer and the responsible person from the company. Student can fulfill the course requirements also by a project work.

Temeljni literatura in viri / Readings:

- Navodila za delo/work instructions.
- Priročniki/manuals.
- Notranji akti organizacije, ki nudi praktično usposabljanje/ Organization's internal acts.

Cilji in kompetence:

Študenti se ob praktičnem usposabljanju povežejo pridobljeno znanje s prakso. Pridobijo praktične izkušnje v delovnem okolju. Spoznajo se s problematiko sodobnega informacijskega ali tehnološkega podjetja ali druge ustanove.

Objectives and competences:

Students combine working experience and professional knowledge. They acquire practical experiences in the frame of working environment. Students acquire knowledge about modern information or technological company or some other institution.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje in razumevanje zapletenih odnosov praktičnega sodelovanja matematika v delovnem okolju.

Uporaba: Uporaba praktičnih izkušenj pri oblikovanju poklicne poti.

Refleksija: Razumevanje praktičnega dela v konkretnem delovnem okolju in uporaba pridobljenega znanja pri praktičnih problemih.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnost uporabe matematičnega znanja v delovnem okolju.

Intended learning outcomes:

Knowledge and understanding: Knowledge and understanding of complicated relationships between a mathematician and working environment.

Application: Application of practical experiences into working carrier.

Reflection: Understanding of practical work in a particular working environment and application of the academic knowledge for solving practical problems.

Transferable skills: Ability of transferring mathematical knowledge into a working environment.

Metode poučevanja in učenja:

praktično usposabljanje

Learning and teaching methods:

working experience

Načini ocenjevanja:

Praktično delo, zaključno poročilo o praktičnem usposabljanju
Ocene: opravljen/nepopravljen (po Statutu UL)

Delež (v %) /

Weight (in %)

Assessment:

Practice, final report
Grading: passed/not passed (according to the Statute of UL)

100%

Univerzitetna koda predmeta / University course code:

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
30	15	30			105	6

Nosilec predmeta / Lecturer:

Jeziki / Languages: **Predavanja / Lectures:**
Vaje / Tutorial:

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:

Content (Syllabus outline):

Predavatelj izbere nekatere pomembne teme s področja optimizacije, kot so na primer:

- Matematične osnove metod notranjih točk.
- Zahtevnejši problemi kombinatorične optimizacije.
- Celoštevilsko programiranje.
- Iterativne metode v optimizaciji.
- Hevristike, **evolucijsko in** genetsko programiranje.
- **Praktična uporaba** optimizacijskih metod v financah, ekonomiji, **logistiki**, telekomunikacijah ipd.
- Stohastično programiranje, itd.

The lecturer selects some important topics in optimization, such as:

- Mathematical foundations of interior-point methods.
- Advanced problems of combinatorial optimization.
- Integer programming.
- Iterative methods in optimization.
- Heuristics, evolutionary and genetic programming.
- Applications of optimization methods in finance, economy, logistics, telecommunications, etc.
- Stochastic programming, etc.

Temeljni literatura in viri / Readings:

- S. Boyd, L. Vandenberghe: *Convex Optimization*, Cambridge University Press, Cambridge, 2004.

- Z. Michalewicz, D. B. Fogel: *How to Solve It: Modern Heuristics*, 2. izdaja, Springer, Berlin, 2004.

Cilji in kompetence:

Študent podrobneje spozna eno ali več pomembnejših področij optimizacije.

Objectives and competences:

Students become acquainted with one or several of the more important areas of optimization.

Predvideni študijski rezultati:

Znanje in razumevanje: Slušatelj se natančneje seznanja z izbranim področjem optimizacije. Spozna teoretične osnove ter praktične prijeme pri reševanju optimizacijskih

Intended learning outcomes:

Knowledge and understanding: Students gain deeper knowledge of selected optimization areas. They become familiar with both the theoretical foundations and the techniques for

nalog z izbranega področja.

Uporaba: Reševanje optimizacijskih problemov iz vsakdanjega življenja.

Refleksija: Pomen **ustreznega modeliranja optimizacijskih problemov, kar omogoča njihovo učinkovito** reševanje.

Prenosljive spretnosti – niso vezane le na en predmet: Modeliranje nalog iz vsakdanjega življenja v obliki matematičnih optimizacijskih nalog, zmožnost razločevanja med računsko obvladljivimi in neobvladljivimi problemi, sposobnost samostojnega snovanja modelov in njihove analize s pomočjo računalnika.

solving optimization problems in these areas.

Application: Solving optimization problems which arise in practice.

Reflection: The importance of adequate modelling of optimization problems which facilitates their efficient solving.

Transferable skills: Capabilities to model practical problems as mathematically formulated optimization problems, to distinguish between computationally feasible and infeasible problems, to construct models and to analyze them by means of appropriate software tools.

Metode poučevanja in učenja:

predavanja, **seminar**, vaje, domače naloge, konzultacije **in samostojno delo študentov**

Learning and teaching methods:

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vpis v letnik študija

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Študent spozna programsko opremo za reševanje matematičnih problemov. Poudarek je predvsem na praktični uporabi in spoznavanju programske opreme. Predstavljena so naslednja področja (v oklepajih je predlagana programska oprema):

- analiza (Mathematica, Sage)
- diskretna matematika (Mathematica, Sage, Vega, Pajek)
- algebra (Mathematica, Sage, Magma, GAP)
- topologija in geometrija (Mathematica, Sage, GeoGebra, programska oprema za računanje topoloških invariant)
- statistika in finančna matematika (R)
- logika (Isabelle, Coq, HOL, Agda)

Students learn how to use software for solving mathematical problems. The course focuses on the practical aspects and proficient use of software. The following areas of computerized mathematics are covered (suggested software is listed in parentheses):

- analysis (Mathematica, Sage)
- discrete mathematics (Mathematica, Sage, Vega, Pajek)
- algebra (Mathematica, Sage, Magma, GAP)
- topology and geometry (Mathematica, Sage, GeoGebra, various specialized programs for topology invariants)
- statistics and financial mathematics (R)
- logic (Isabelle, Coq, HOL, Agda)

Temeljni literatura in viri / Readings:

- Uporabniški priročniki za programsko opremo.
- User manuals and other documentation for the software at hand.

Cilji in kompetence:

Spoznavanje in uporaba programske opreme za reševanje matematičnih problemov.

Objectives and competences:

Introduction to and application of specialized software for doing mathematics.

Predvideni študijski rezultati:

Znanje in razumevanje:

Praktično znanje iz uporabe zahtevnih programskih paketov za reševanje matematičnih problemov.

Uporaba:

Uporaba računalnikov v matematiki.

Refleksija:

Moderna računalniška tehnologija je postala

Intended learning outcomes:

Knowledge and understanding:

Practical knowledge and use of advanced programs for solving mathematical problems.

Application:

Application of computers in mathematics.

Reflection:

Modern computer technology has become an indispensable tool in mathematics.

nepogrešljivo orodje za matematika.
Prenosljive spretnosti – niso vezane le na en predmet:

Predmet ima izrazito aplikativno naravnost in študentom omogoči uporabo sodobnih orodij pri ostalih študijskih predmetih.

Transferable skills:

The emphasis on practical use and applications enables the student to use computers in all other courses.

Metode poučevanja in učenja:

predavanja, vaje, projekti, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, project course, homeworks, consultations

Načini ocenjevanja:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

- projektno delo
- predstavitev in zagovor projekta

Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

Delež (v %) /

Weight (in %)

Assessment:

Vsebina: **Content (Syllabus outline):**

Konveksne množice in funkcije, konveksno programiranje. Lagrangeova prirejenost, dualna naloga, šibka in krepka dualnost. Slaterjev pogoj, Karush-Kuhn-Tuckerjev izrek.

Optimizacijski problemi z linearnimi omejitvami, kvadratično in semidefinitno programiranje s posplošitvami. Numerični postopki, kazenske metode. Celoštevilsko programiranje.

Kratek pregled računalniških orodij za reševanje optimizacijskih problemov.

Convex sets and functions, convex programming. Lagrange duality, dual problem, weak and strong duality. Slater's condition, the Karush-Kuhn-Tucker theorem.

Linearly constrained optimization problems, quadratic and semidefinite programming with generalizations. Numerical procedures, penalty functions. Integer programming.

A short overview of software tools for solving optimization problems.

Temeljna literatura in viri / Readings:

- S. Boyd, L. Vandenberghe: *Convex Optimization*, Cambridge Univ. Press, Cambridge, 2004.
- B. H. Korte, J. Vygen: *Combinatorial Optimization: Theory and Algorithms*, 3. izdaja, Springer, Berlin, 2006.

Cilji in kompetence:

Študent spozna osnovne vrste **problemov matematičnega programiranja** s poudarkom na konveksnih problemih. Seznan je z osnovnimi matematičnimi prijemi za njihovo reševanje, hkrati pa za praktično reševanje uporablja tudi ustrezne računalniške pakete.

Objectives and competences:

Students encounter the fundamental types of problems in mathematical programming, with emphasis on the convex ones. They get to know the basic mathematical tools for tackling these problems, using appropriate software packages for solving them in practice.

Predvideni študijski rezultati:

Znanje in razumevanje: Študent je sposoben z matematičnim modelom dobro opisati različne **pomembne uporabne** probleme. Pozna osnovne prijeme in računalniška orodja za učinkovito reševanje dobljenih optimizacijskih problemov.

Uporaba: Reševanje optimizacijskih problemov iz **prakse**.

Refleksija: Pomen predstavitve praktičnih problemov v formalizirani obliki, ki omogoča njihovo učinkovito in pravilno reševanje.

Intended learning outcomes:

Knowledge and understanding: Students are able to model various important applied problems accurately. They are familiar with the basic techniques and software tools that can be used to solve the resulting optimization problems efficiently.

Application: Solving optimization problems which appear in practice.

Reflection: The importance of representing practical problems in a formal way which helps to solve them efficiently and adequately.

Prenosljive spretnosti – niso vezane le na en predmet: Modeliranje nalog iz vsakdanjega življenja v obliki matematičnih optimizacijskih nalog, zmožnost razločevanja med računsko obvladljivimi in neobvladljivimi problemi, sposobnost samostojnega snovanja modelov in njihove analize s pomočjo računalnika.

Transferable skills: Ability to model practical problems as mathematically formulated optimization problems, to distinguish between computationally feasible and infeasible problems, to construct models on one's own and to analyze them by means of appropriate software tools.

Metode poučevanja in učenja:

predavanja, seminar, vaje, domače naloge, konzultacije in samostojno delo študentov

Learning and teaching methods:

Lectures, seminar, exercises, homework, consultations, and independent work by the students

Predavanja / Lectures:	slovenski/Slovene, angleški/English
Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Predavatelj izbere teme iz naslednjega seznama:

- Uravnovežena iskalna drevesa.
- Zgoščene tabele.
- Binomske in Fibonaccijeve kopice.
- Vodenje disjunktnih množic.
- Algoritmi na nizih (Rabina in Karpa; Knutha, Morrisa in Pratta; Boyerja in Moora).
- Računanje konveksne ovojnice.
- Voronojev diagram in Delauneyeva triangulacija.
- Iskanje maksimalnega pretoka s pretokom.
- Iskanje največjega (uteženega) prirejanja v splošnem grafu.
- Algoritem alpha-beta.
- Algoritmi za ravninske grafe.
- Algoritmi za zunanji pomnilnik.
- Vztrajne podatkovne strukture.
- Podatkovne strukture za cela števila.
- Enostavni vzporedni algoritmi.
- Dinamična drevesa.

The lecturer chooses topics from the following list:

- Balanced search trees.
- Hash tables.
- Binomial and Fibonacci heaps.
- Union-find for disjoint sets.
- Algorithms for strings (Rabin and Karp; Knuth, Morris and Pratt; Boyer and Moore).
- Computation of convex hulls.
- Voronoi diagram and Delaunay triangulation.
- Finding maximum flows with preflows.
- Finding largest (weighted) matchings in general graphs.
- Alpha-beta algorithm.
- Algorithms for planar graphs.
- Algorithms for external memory.
- Persistent data structures.
- Data structures for integers.
- Simple parallel algorithms.
- Dynamic trees.

Temeljni literatura in viri / Readings:

- T. H. Cormen, C. E. Leiserson, R. L. Rivest, C. Stein: *Introduction to Algorithms*, 2. izdaja, MIT Press, 2001.
- D. C. Kozen: *The Design and Analysis of Algorithms*, Springer, 1991.
- D. E. Knuth: *Selected Papers on Analysis of Algorithms*, Cambridge University Press, 2000.
- S. Even, G. Even: *Graph Algorithms*, 2. izdaja, Cambridge University Press, 2011.
- Znanstveni članki.

Cilji in kompetence:

Študent nadgradi poznavanje podatkovnih struktur in z njimi povezanih algoritmov, ki se uporabljajo pri načrtovanju učinkovitih algoritmov. Ob tem poglobi znanje o matematični analizi pravilnosti ter časovne in prostorske zahtevnosti algoritmov.

Objectives and competences:

The students improve their knowledge of data structures and related algorithmic techniques used in the design of efficient algorithms. They also develop the knowledge of mathematical analysis for the correctness and the time/space complexity of algorithms.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje zahtevnejših podatkovnih struktur in algoritmov, praktičnih in teoretičnih problemov, pri katerih se jih lahko smiselno uporabi, ter poznavanje osnov teorije računske zahtevnosti.

Uporaba: Snovanje učinkovitih računalniških programov in napovedovanje njihovega obnašanja v praksi s pomočjo matematičnih metod.

Refleksija: Povezanost med teoretičnimi napovedmi o obnašanju računalniških programov in dejanskim obnašanjem.

Prenosljive spretnosti – niso vezane le na en predmet: Pomen matematične analize računskih postopkov in njena praktična uporabnost. Ločevanje med računsko zahtevnimi in manj zahtevnimi problemi.

Intended learning outcomes:

Knowledge and understanding: Learning more about complex data structures and algorithms, practical and theoretical problems where this knowledge can be applied, and the basics of computational complexity.

Application: The design of efficient computer programs and prediction of their behavior in practice by using mathematical methods.

Reflection: The correlation between theoretical predictions about the behavior of computer programs and their actual behavior.

Transferable skills: The importance of mathematical analysis of computational processes and its practical application. Classification into difficult and less complex problems.

Metode poučevanja in učenja:

predavanja, seminar, vaje, domače naloge, konzultacije in samostojno delo študentov

Learning and teaching methods:

Lectures, seminar, exercises, homework, consultations and independent work by the students

Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Content (Syllabus outline):

Modeli računanja. Časovna in prostorska zahtevnost. Determinizem in nedeterminizem. Redukcije in polnost.

Fenomen NP-polnosti. Nekaj izbranih NP-polnih problemov. Tehnike dokazovanja NP-polnosti. Struktura razreda NP.

Verjetnostni algoritmi. Vrste verjetnostnih algoritmov. Verjetnostni razredi zahtevnosti. Generatorji psevdonaključnosti.

Aproksimativni algoritmi. Kakovost aproksimacije. Težavnost aproksimacije. Aproksimacijske sheme. Nekaj izbranih aproksimacijskih algoritmov.

Dodatno vsebino lahko predavatelj izbere med naslednjimi temami: Booleova vezja, interaktivni dokazi, kvantno računalništvo, izreki PCP, komunikacijska zahtevnost, parametrična zahtevnost.

Models of computation. Time and space complexity. Determinism and nondeterminism. Reductions and completeness.

NP-completeness. Some selected NP-complete problems. Techniques to prove NP-completeness. Structure of the class NP.

Probabilistic algorithms. Types of probabilistic algorithms. Related computational classes. Pseudorandom generators.

Approximation algorithms. Quality of approximation. Hardness of approximation. Approximation schemes. Selected approximation algorithms.

Additional content may be selected among the following topics: Boolean circuits, interactive proofs, quantum computing, PCP theorems, communication complexity, parameterized complexity.

Temeljni literatura in viri / Readings:

- S. Arora, B. Barak: *Computational Complexity: A Modern Approach*, Cambridge University Press, 2009.
- M. R. Garey, D. S. Johnson: *Computers and intractability. A guide to the theory of NP-completeness*, W. H. Freeman and Co., 2003.
- R. Motwani, P. Raghavan: *Randomized Algorithms*, Cambridge University Press, Cambridge, 1995.
- V. V. Vazirani: *Approximation algorithms*, Springer-Verlag, 2001.

Cilji in kompetence:

Študent se seznani z osnovnimi modeli računanja, teorijo NP-polnosti, verjetnostnimi algoritmi in z reševanjem težkih problemov z aproksimativnimi algoritmi.

Objectives and competences:

Students become acquainted with the basic models of computation, the theory of NP-completeness, probabilistic algorithms, and with solving hard problems approximately.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje: Študentje poznajo:

- povezave med modeli računanja
- teorijo NP-polnosti
- pojem verjetnostnega algoritma
- pojem aproksimativnega algoritma

Uporaba: Študentje znajo:

- analizirati časovno zahtevnost algoritmov
- dokazovati NP-polnost
- načrtovati verjetnostne algoritme
- načrtovati aproksimativne algoritme

Refleksija: Študentje spoznajo:

- hierarhijo problemov glede na njihovo časovno zahtevnost
- inherentno težke probleme
- relaksacijske pristope k reševanju težkih problemov

Prenosljive spretnosti – niso vezane le na en predmet: Analiza težavnosti problemov s pomočjo redukcij med njimi.

Knowledge and understanding: The students understand:

- connections between models of computation;
- theory of NP-completeness;
- the concept of probabilistic algorithm;
- the concept of approximation algorithm.

Application: The students are able to:

- analyze time complexity of algorithms;
- prove NP-completeness;
- design probabilistic algorithms;
- design approximation algorithms.

Reflection: The students meet:

- problem hierarchies by time complexity;
- inherently hard problems;
- relaxations to solve hard problems.

Transferable skills: Analysis of the hardness of problems using reductions between them.

Metode poučevanja in učenja:

predavanja, seminar, vaje, domače naloge, konzultacije in samostojno delo študentov

Vaje / Tutorial:	slovenski/Slovene, angleški/English

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Vpis v letnik študija

Prerequisites:

Enrollment into the program

Vsebina:

Predavatelj izbira med naslednjimi in drugimi aktualnimi temami:

Modeli pri upravljanju portfeljev: model povprečje-varianca. Markowitzeva teorija. Razpršenost donosov in njeno merjenje. Optimalne strategije. Teorija vrednotenja brez arbitraže. CAPM model. Enofaktorski in večfaktorski modeli. Modeli Bayesovega tipa. Black- Littermanov algoritem. Enoobdobni in večobdobni modeli. Linearni faktorski modeli. Vrednotenje naložb v zveznem času.

Content (Syllabus outline):

Lecturer can choose among the following and some other current topics:

Portfolio management: mean-variance model. Markowitz theory. Volatility of returns and its measurement. Arbitrage pricing. CAPM model. One and multifactor models. Bayesian models. Black-Litterman algorithm. One period and multiperiod models. Pricing in continuous time. Mathematical models for high frequency trading.

Consumption and investment: definitions, optimization problems, general equilibrium,

Matematični modeli za algoritmično in visokofrekvenčno trgovanje.

Potrošnja in naložbe: definicije, optimizacijski problemi, ravnovesje, problemi s stranskimi pogoji, nepolni trgi.

Stohastična optimizacija: stohastična teorija upravljanja, Malliavinov račun. Viskoznostne rešitve.

side conditions, incomplete markets.

Stochastic optimization: stochastic control theory, Malliavin calculus. Viscosity solutions.

Temeljni literatura in viri / Readings:

- I. Aldridge: High frequency trading: A practical guide to algorithmic strategies and trading systems. Wiley, 2013.

- D. Nualart, The Malliavin calculus and related topics, Berlin, Heidelberg, New York: Springer, 2006.

Cilji in kompetence:

Predmet pokriva poglavja iz matematičnih financ, pri katerih se prepleta ekonomsko razmišljanje z zapletenimi matematičnimi orodji. Nekatera poglavja so nadgradnja prejšnjih z dodatnimi interpretacijami, nekatera pa so pomemben del razmišljanja o tveganju.

Zaradi nepostredne uporabnosti vsebin bodo pri predmetu sodelovali tudi strokovnjaki iz prakse.

Objectives and competences:

The course covers topics in mathematical finance in which economic reasoning is combined with advanced mathematical tools. Some of them are based on previous courses and give additional interpretation, some contribute to understanding of the risks.

Since the content is of great practical importance we expect that also specialists from financial practice will present their work experience during the course.

Predvideni študijski rezultati:

Znanje in razumevanje:

Razumevanje matematičnih modelov, ki se uporabljajo v matematičnih finančnih sredstvih za njihovo obravnavo.

Uporaba:

Intended learning outcomes:

Knowledge and understanding:

Understanding of mathematical models used in mathematical finance and the mathematical tools used in solutions.

Application:

Pridobljeno znanje je po eni strani neposredno prenosljivo, po drugi strani pa je izhodišče za kombiniranje matematičnega znanja z ekonomskimi vsebinami.

Refleksija:

Področje, in s tem posledično predmet, združuje številne znanja iz matematike od linearna algebre do parcialnih diferencialnih enačb.

Prenosljive spretnosti – niso vezane le na en predmet:

Pridobljeno znanje je neposredno uporabno v finančnih ustanovah kot so banke in zavarovalnice. Vsebina predmeta tudi pomaga izostriti sposobnosti matematičnega modeliranja.

The knowledge and skills acquired are directly transferable and can also serve for combining mathematical reasoning with economic topics.

Reflection:

The subject of the course, hence the course itself, combines numerous mathematical skills starting from linear algebra to partial differential equations.

Transferable skills:

The knowledge and skills acquired are immediately applicable in financial institutions such as banks and insurance companies. The content also serves to deepen the ability to use mathematical models.

Metode poučevanja in učenja:

predavanja, vaje, konzultacije, seminarske naloge

Learning and teaching methods:

Lectures, exercises, consultations, seminars

Delež (v %) /

Weight (in %)

Načini ocenjevanja:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

- samostojna seminarska naloga
- teoretični del izpita

Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

50%
50%

Assessment:

Type (examination, oral, coursework, project):

- individual seminar
- exam on the course content

Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)

UČNI NAČRT PREDMETA / COURSE SYLLABUS						
Predmet:		Magistrsko delo				
Course title:		Masters thesis				
Študijski program in stopnja Study programme and level		Študijska smer Study field		Letnik Academic year		Semester Semester
Magistrski študijski program 2. stopnje Finančna matematika		ni smeri		drugi		prvi ali drugi
Second cycle master study program Financial Mathematics		none		second		first or second
Vrsta predmeta / Course type				Obvezen predmet /compulsory course		
Univerzitetna koda predmeta / University course code:						
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
					540	18
Nosilec predmeta / Lecturer:		doc. dr. Janez Bernik, prof. dr. Tomaž Košir, prof. dr. Matjaž Omladič				
Jeziki / Languages:		Predavanja / Lectures:	slovenski/Slovene, angleški/English			
		Vaje / Tutorial:	slovenski/Slovene, angleški/English			
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:			Prerequisites:			
Vpis v letnik študija			Enrollment into the program			
Vsebina:			Content (Syllabus outline):			

<p>V magistrskem delu študent podrobno predstavi izbrano temo.</p>	<p>In the Master's thesis the student presents the chosen topic in detail.</p>

Temeljni literatura in viri / Readings:

Za magistrsko delo so viri izbrani članki in monografije.

References for the masters thesis are selected papers and monographies.

Cilji in kompetence:

Študent se nauči novega področja in obnovi znanje osnovnih področij finančne matematike.

Objectives and competences:

The student learns a new area and refreshes his or her knowledge of basic areas of mathematics.

Predvideni študijski rezultati:**Znanje in razumevanje:**

Poznavanje osnov finančne matematike, ki se jo predela na drugi stopnji študija.

Uporaba:

V finančni matematiki in praksi.

Refleksija:

Poznavanje teorije, ki temelji na primerih in uporabah.

Prenosljive spretnosti – niso vezane le na en predmet:

Formulacija problema, reševanje problema in analiza rezultatov na primerih.

Intended learning outcomes:**Knowledge and understanding:**

Basic notions of financial mathematics at masters level.

Application:

In financial mathematics and practice.

Reflection:

Understanding theory based on examples and applications.

Transferable skills:

Formulation of problems, solving problems and analysis of results using examples.

Metode poučevanja in učenja:**Learning and teaching methods:**

Konzulacije, samostojno delo.

Consultations, individual work.
