

FIRST RESULTS AND DUAL RADIATOR RUNS

Rok Pestotnik

Jožef Stefan Institute, Ljubljana, Slovenia

March 9, 2003
Aerogel Rich beamtest review meeting

- ❖ Database
- ❖ Dual radiator- focusing type setup: First impressions

- ❖ Suggestions for further measurements

Statistics of the recorded data

- ❖ Total number of recorded events: 1824709
- ❖ Average DAQ rate: 18.26 Hz
- ❖ Average tracking efficiency (at least one space point reconstructed): 0.92
- ❖ Average tracking efficiency (two space points reconstructed): 0.58
- ❖ Run information
<http://www-f9.ijs.si/rok/aerorich/beamtest2004/run.html>
- ❖ Measured setups
http://www-f9.ijs.si/rok/aerorich/beamtest2004/run_aerogel.html
- ❖ Preliminary results for Hamamatsu H8500, Hamamatsu R5900-M16 and MCP Burle 85011

Dual radiator - focusing type

Double radiator performance vs single radiators - more photons with comparable resolution!

Radiator	Run	n	d(mm)	trl(mm)	N_{det}	σ_{θ_c} (mrad)
MD-6+ MD-9+ MD-2+MD-3	116	1.04698	10.2	45.00	7.33	14.3
		1.04645	10.5	45.59		
		1.05622	10.5	30.01		
		1.05622	10.0	28.86		
MD-2+ MD-3	106	1.05622	10.5	30.01	6.15	15.3
		1.05622	10.0	28.86		
MD-6+ MD-9	28	1.04698	10.2	45.00	5.51	14.0
		1.04645	10.5	45.59		

Measurements plan

Some suggestions for further measurements:

- ❖ detailed HV scan (in steps of 20V 4000 events per run)
- ❖ Measure photon yield of combinations of aerogels with different refractive index, i.e. focusing and defocusing setup
- ❖ measure angular dependence of the focusing and defocusing type setup
- ❖ measure momentum dependence of the focusing and defocusing type setup
- ❖ double radiator at $p=+4\text{GeV}/c$
- ❖ high statistics run with single radiator
