

MCP surface scan geometry

- ❖ signals readout with ASD boards (HERA-B RICH)
ASD8 chips - amplifier, shaper, discriminator
digital output realized as a current source
- ❖ AMPDISSH boards used for ASD8 output signal to ECL conversion
- ❖ hit counting with scaler.

MCP: 1st surface scan

- ❖ 1 channel excluded (strange behavior)
- ❖ relatively non-uniform response comparing different channels due to multiple counts???
- ❖ very first results!!!
